T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from the Local Gazettes, and give the District details of the Provincial totals published weekly in the Crop and Weather Summary of the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons gratuitously relieved in poor-houses or at their homes.

The dates at the head of the table are the dates of the *Gazette of India* in which the Provincial totals were published. The figures, however, actually show the numbers on relief in each preceding week.

* Figures not reported.

T. W. HOLDERNESS,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

FOREIGN DEPARTMENT.

STATISTICS OF THE TRADE OF INDIA WITH CHINESE AND RUSSIAN TURKISTAN AND TIBET FOR THE YEAR ENDING 31ST MARCH 1899.

No. 317, dated Leh, the 10th August 1899.

From—CAPTAIN R. L. KENNION, Assistant to the Resident in Kashmir for Leh, Ladakh,

To—The Resident in Kashmir, Gulmarg.

I have the honour to submit herewith, for favour of transmission to the Government of India, the statistics of the trade of India with Chinese and Russian Turkistan and Tibet for the year ending 31st March 1899.

2. The total value of trade which passed through Leh during the year under report amounts to Rs. 39,75,168-4 against Rs. 42,02,640-15 in the previous year—a decrease of Rs. 2,27,472-11.

3. The subjoined table gives the figures for the past ten years. It will be seen that there has been a rapid decline in the last two years. This may be almost entirely attributed to the *charas* trade being no longer profitable.

YEARS.	Import.			Export.			TOTAL.		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
1889-90	16,00,580	0	0	15,13,626	0	0	31,14,206	0	0
1890-91	15,25,483	0	0	14,10,906	0	0	29,66,389	0	0
1891-92	15,65,278	0	0	14,47,840	0	0	30,13,118	0	0
1892-93	17,95,141	0	0	15,91,544	0	0	33,86,685	0	0
1893-94	21,54,252	0	0	18,37,375	0	0	39,91,627	0	0
1894-95	31,65,218	4	0	28,50,102	12	0	60,15,321	0	0
1895-96	33,20,751	10	0	28,95,426	2	0	62,16,177	0	0
1896-97	31,00,098	0	0	28,30,144	8	0	59,30,142	8	0
1897-98	22,39,262	1	6	19,63,378	13	6	42,02,640	15	0
1898-99	20,91,756	3	0	18,83,412	1	0	39,75,168	4	0
TOTAL	2,25,57,820	2	6	1,99,53,755	4	6	4,25,11,575	7	0
Average	22,55,782	0	3	19,95,375	8	0	42,51,157	8	8

4. The schedule below gives the value and direction of the trade for the past two years between India, Chinese Turkistan and Tibet:—

YEAR.		India.			Chinese Turkistan.			Tibet.			TOTAL.		
		Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
Import from	1897-98	14,44,008	12	0	6,47,947	5	6	1,47,306	0	0	22,39,262	1	6
	1898-99	12,97,106	14	0	6,56,578	3	0	1,38,071	2	0	20,91,756	3	0
Export to	1897-98	7,66,618	13	6	11,10,723	0	0	86,037	0	0	19,63,378	13	6
	1898-99	7,70,252	1	0	10,32,114	6	0	81,045	10	0	18,83,412	1	0

5. A point noticeable in the above schedule is that, while the value of the goods sent from India to Leh and re-exported thence to Yarkand has fallen by

nearly a lakh and statistics indicate a general depression in the trade, the goods received in Leh from Yarkand and exported to India shew a slight increase in value. The explanation seems to lie in the dislocation of the *charas* trade owing to the tax on this drug in the Punjab.

The crop having been an unusually plentiful one; actually more *charas* was exported to India than for many years past; but owing to the diminished demand, prices ruled low and the money realised by its sale was considerably less than in former years. To pay for the Indian goods imported into Yarkand, however, it was necessary to export more goods of other kinds, silver and gold, etc. The fact appears to be that Chinese Turkistan has had to pay for a diminished quantity of Indian goods with an increased quantity of *charas* and other exports, and it also seems probable that Indian traders, finding the purchase of *charas* in Leh no longer remunerative, embarked less money in the trade, and sent fewer goods to Turkistan.

PIECE GOODS.

6. The exports to Turkistan of English and continental piece goods amounted to Rs. 4,88,250 against Rs. 4,97,750 in the previous year, that of Indian manufactured cotton to Rs. 3,510 against Rs. 15,925 in the previous year.

Exports to Tibet were, of English and continental goods, Rs. 2,000 against Rs. 1,625 in the previous year, and of Indian goods Rs. 1,920 against Rs. 5,395.

There was a decrease of Rs. 25,250 only in the total value as compared with last year.

The following are the totals for the last five years :—

	Rs.
1894-95	6,73,440
1895-96	7,27,000
1896-97	7,67,562
1897-98	5,54,125
1898-99	5,28,875

DRUGS AND MEDICINES.

7. The import figures of *charas* for the last four years in *maunds* are as follows :—

	Maunds.
1895-96	6,106
1896-97	4,663
1897-98	4,020
1898-99	5,191

Prices of *charas* ruled low, averaging Rs. 24 to Rs. 35 in Leh against an average of Rs. 55 the previous year. A large quantity is still reported to be lying unsold in the Punjab godowns.

DYEING MATERIAL.

8. The trade in indigo is very fluctuating and depends on prices obtaining in Yarkand. The exports in the year under report were smaller than usual for reasons specified in paragraph 5 of this report.

The figures for the past four years are as follows :—

	Rs.
1895-96	88,275
1896-97	27,160
1897-98	68,640
1898-99	35,880

HIDES AND SKINS.

9. These are exported to Turkistan from India. The value of the trade shows a decrease of Rs. 4,344 from that of the previous year.

The past four years' figures are quoted below :—

	Rs.
1895-96	70,582
1896-97	61,980
1897-98	52,892
1898-99	48,548

LEATHER.

10. Exported to Turkistan. A decrease of Rs. 15,190.

The following are the tables for the last two years :—

	Rs.
1897-98	1,60,860
1898-99	1,45,670

CARPETS AND NAMDAS.

11. The trade under the heads of *Namdas* shows a slight increase of Rs. 1,867 as compared with last year's report, and a decrease of Rs. 1,804 in carpets.

The cause of this increase is that with diminishing profits on *charas* traders are forced to look for other commodities in which to pay for their Indian purchases. The bulk of this class of goods is for sale in Kashmir. The trade is not capable of much extension.

The following are the figures for the past five years :—

	Carpets.	Namdas.
	Rs.	Rs.
1894-95	5,070	29,748
1895-96	4,365	27,844
1896-97	9,420	23,550
1897-98	8,400	27,375
1898-99	6,596	29,242

PRECIOUS METALS.

12. The amount of both gold and silver imported in the year under report shows a slight increase over the previous year.

They were both, however, rather a forced medium for the transfer of capital to India than a profitable one. Of the two, gold is the more remunerative, and would be sent down to India in larger quantities if it were obtainable. It is of two kinds, that brought from Tibet and that from the Khotan mines. The prices of the two sorts are at present in Leh :—

Khotani	21½ rupees per tola.
Tibetan	19 ,, ,, ,,

The quantity of the former obtainable is limited owing to the action of the Amban, who, I am informed, has passed orders prohibiting its sale. What arrives in Leh is therefore smuggled. Tibetan gold would come in in larger quantities, if the trade with this country was larger.

Silver as an article of export to India no longer pays.

A Chinese *kurus* weighing 157 tolas is worth in Leh 115 rupees.

The figures under the above head for the past five years are as follows :—

	Gold.			Silver.
	Rs.	a.	p.	Rs.
1894-95	3,56,702	0	0	6,78,331
1895-96	3,25,925	0	0	6,17,524
1896-97	3,48,339	0	0	5,82,347
1897-98	2,48,161	8	0	2,18,412
1898-99	2,59,710	0	0	2,76,640

OPIUM.

13. No opium was imported during the year under report.

SILK, RAW.

14. Raw silk to the value of Rs. 65,494 was imported during the year, as against Rs. 15,570 worth imported in the previous year, an increase of Rs. 49,924. This is due to, on the one hand, the previous year's culture having been unusually successful and also to the conditions mentioned under the head *Carpets* and *Namdas*.

The figures for the previous four years are as follows :—

	Rs.
1895-96	14,332
1896-97	34,050
1897-98	15,570
1898-99	65,494

SPICES.

15. Exported from India to Turkistan.

The trade under this head shows a decrease of Rs. 5,210 as compared with that of last year.

The figures for the past five years are as follows :—

	Rs.
1894-95	35,805
1895-96	36,225
1896-97	58,590
1897-98	22,060
1898-99	16,850

PRECIOUS STONES.

Turquoises and Corals.

16. Turquoises imported are for local use, *i.e.*, in Kashmir and Ladakh. They are obtained from China *viá* Lhassa and from Meshed *viá* Bombay. The latter are of superior quality, but owing to plague regulations were not imported during the year under report.

The trade in coral with Turkistan suffered along with other Indian exports to this country.

The trade with Tibet in this commodity was slack owing to no big caravans passing.

Dealings under the head of turquoises show a decrease of Rs. 5,606 on those of the previous year, and the trade in imported corals and turquoises a decrease of Rs. 24,791 as compared with last year's report.

The figures for the last ten years are attached—

	Rs.
1889-90	35,170
1890-91	45,532
1891-92	56,286
1892-93	56,288
1893-94	1,47,030
1894-95	2,43,262
1895-96	2,48,045
1896-97	1,86,405
1897-98	1,56,440
1898-99	1,31,649

SUGAR.

17. Seven hundred and two maunds of sugar to the value of Rs. 12,084 was imported into Leh this year against 609 maunds to the value of Rs. 14,118,

in the previous year. This decrease in value is due to the lowering of the bazar rate only owing to the import of a large quantity in 1896.

INDIAN TEA.

18. The trade in Indian tea imported this year shows a decrease of Rs. 14,210 on that of previous year.

The trade in Indian tea struggles on under adverse circumstances. Its importation is prohibited both in Chinese Turkistan and in Tibet. It is reported that the Andijanis, who were the principal buyers of tea smuggled into Turkistan, are now prohibited from carrying it into Russian territory.

The figures for the last ten years are as subjoined :—

	Rs.
1889-90	51,762
1890-91	32,947
1891-92	37,220
1892-93	39,060
1893-94	45,700
1894-95	57,280
1895-96	72,315
1896-97	73,025
1897-98	43,180
1898-99	28,970

CHINA TEA.

19. A green leaf tea, imported *viâ* Bombay or Calcutta, shows a decrease of Rs. 1,010.

The figures are as follows :—

	Rs.
1889-90	900
1890-91	1,840
1891-92	1,540
1892-93	4,865
1893-94	8,890
1894-95	7,070
1895-96	9,870
1896-97	9,270
1897-98	8,360
1898-99	7,350

LHASSA BRICK TEA.

20. The trade under this head shows a decrease of Rs. 6,048 as compared with last year.

The trade with Tibet depends entirely on whether any big caravan happens to travel to or from Lhassa during the year.

The figures for the last ten years are as follows :—

	Rs.
1889-90	62,580
1890-91	24,640
1891-92	46,980
1892-93	39,285
1893-94	18,447
1894-95	45,448
1895-96	22,320
1896-97	21,881
1897-98	20,100
1898-99	14,052

WOOL.

Unmanufactured.

21. Imported from Tibet and sent to Kashmir.

The trade under this head shows a decrease of Rs. 888 on that of the previous year.

Prices ruled low. I am told that the Tibet wool is too full of dirt for there to be a great demand for it in Kashmir.

Manufactured.

22. Manufactured woollen goods show also a decrease of Rs. 152-8.

The value of the above goods imported during the year under report was Rs. 2,120 as against Rs. 2,272-8 in the previous year.

Although this class of goods shared in the general depression in trade, it is interesting to notice that a small trade in "Merino" shawls is springing up with Tibet. A few were exported last year and found a ready sale. These are of French and German manufacture and very cheap. They seem to be driving out the Kashmir-made article, "*Pashmina*," which is better and more expensive.

PASHM.

23. The value of the *Pashm* imported from Turkistan and Tibet during the year under report was Rs. 43,969 as against Rs. 49,640 in the previous year.

MISCELLANEOUS.

Mirrors, etc.

24. The trade under this head shows an increase.

The total amount of the miscellaneous imports is Rs. 39,935 against Rs. 35,088 the previous year.

GENERAL REMARKS.

25. The certainty of a prolonged depression, if not a permanent decline, in the trade between India and Turkistan, has formed the keynote of the Ladakh trade reports since 1896 when, at the instance of the Hemp Drugs Commission, it was decided to impose a tax on *charas* equal to, approximately, 100 per cent. on its value.

In three years the value of the trade has fallen from sixty-two to thirty-nine lakhs of rupees, and at the present time there is every prospect of a further drop.

To understand how the imposition of a tax on a single commodity can destroy the whole trade, it is necessary to remember that *charas* was up to the year 1896 almost the only profitable medium for transmitting to India the capital realised by the sale of imports from India. Other commodities—silk, *namdas*, gold, etc.,—were subsidiary means only to the same end and were either not profitable or not obtainable in sufficient quantities to form an effective substitute for *charas*. The exportation of silver to India has ceased to be attended with profit since the rupee attained a forced value. That the export of *charas* to India during the season under report could not have been profitable is shown by the following figures; indeed it is the complaint of many traders that their operations in the drug during the year 1898-99 resulted in actual loss:—

	Rs.	a.	p.
Yarkand price of *charas* per pony-load of 2 *pais*	54	0	0
Transport of *charas* to Leh	30	8	0
Brokerage	2	0	0
Transport of *charas* from Leh to Punjab	18	0	0
TOTAL	104	8	0

Price of *charas* in the Punjab per pony-load—Rs. 60 to 100.

26. It will be noticed that the maundage of *charas* imported into the Punjab during the past year was greater than for some years past. This was due to the hemp crop having been a plentiful one in Yarkand and to the fact that there is nothing else in Yarkand for which traders can barter their English and Indian goods or in which they could recover their debts. There are now reported to be large stocks of *charas* lying unsold in the Punjab warehouses and it is said that *charas* will again be brought down in large quantities this year.

27. This, if true, will result in a further drop in prices * and the abandonment of the trade by numbers of merchants who no longer find it profitable. Whether the decline in the trade is permanent or not must depend on whether the increased retail price of the drug has the effect of checking consumption. If not, then after a few years the profits on the trade will adjust themselves to the new conditions and a revival may be expected. If so, and this is the more likely alternative and that at which the legislation prompted by the Hemp Drugs Commission was presumably aimed, the trade will dwindle till it reaches the level determined by the diminished demand.

* Prices of *charas* in Leh—

	Rs.
1896	190 pony-load.
1897	150 „
1898	67 „

28. In either case it will be at least another year before equilibrium is restored and production adjusts itself to demand, and in the meantime the Yarkandis who suffer will be tempted to withdraw their capital from such a precarious trade. I have discussed with many traders the possibility of finding a substitute for *charas* either permanently or as a means of tiding over the present depression, but with the exception of gold from Khotan I am assured there is nothing, and this avenue of profit has been closed by the action of the Chinese authorities.†

† *Vide* paragraph 12 *supra*.

29. There is a margin of profit in the carriage of *Pashm* and *Namdas* to Kashmir, but the demand is not large enough for either of these commodities to take the place of *charas*.

30. The trade in raw silk has improved, but it is not capable of much expansion and its prospects are not improved by the opening of the Kashmir factories.

31. I am pleased to be able to report that the trade in Yarkand mules initiated by Major Trench promises to form in future a remunerative subsidiary investment for traders bringing goods to Leh. During the past year 31 mules were purchased in Leh for the Government of India at a cost of Rs. 4,560, and have been favourably reported on by the Commissariat Department, and a larger number are expected to be brought in this year.

Ladakh trade return for the year ending 31st March 1899.

R. L. KENNION, *Captain,*

Assistant to the Resident in Kashmir.

Report on the trade viâ *Ladakh between India and Chinese and Russian Turkistan for the year ending the 31st March 1899.*

According to the statistics of the Leh office, the Indo-Chinese Turkistan trade should have attained its most flourishing condition in 1895-96 when the value of the imports and exports amounted to no less than Rs. 28,01,320. During the following twelve months a fall of Rs. 1,92,956 took place; whilst the year 1897-98, as compared with the preceding, showed a further decline of Rs. 8,49,694. The statistics for 1898-99 have not yet been received in this office; but gauging the value of the trade for that period from the number of merchants engaged, from the quantity of transport hired to and from Ladakh, and other superficial circumstances, there is reason to think that this trade will not prove to have been more satisfactory than that of the preceding year. In March 1898 there were some 30 Hindu merchants in Yarkand. Of these, about 20 returned to India in the autumn, whilst, during the same season, only six fresh traders came to this country. The present number ought not, therefore, to exceed 16, which is, roughly, half of the number of the merchants of last year.

2. The causes of this depression of trade are partly political and partly mercantile. The reasons, purely mercantile, which are accountable for the decline of our trade, are probably the same as those which have been referred to in this office reports for the last two preceding years. These causes are, in the main, of two different characters. First, the decreased demand in India for charas, the chief export from Chinese Turkistan, occasioned by the impost of a duty of Rs. 80 per maund on that commodity; and second, the decreased demand for English and Indian imports, caused by the ever-increasing severity of Russian competition.

3. For an accurate knowledge of the amount of the export trade to India during 1898-99 we must wait for the Leh statistics. But even admitting that there has been no decline as compared with the preceding year, one cannot help noticing the artificial and unhealthy condition under which this trade has been carried on.

4. The exports to India consist chiefly of charas, carpets, namdas, raw silk, wool, gold, and silver.

5. Charas, amounting to 4,020 maunds, was exported during 1897-98. But the quantity for the year under report appears to have been as much as, and possibly more than, that of the previous year. This would *primâ facie* lead one to infer that the demand for charas in India had not been declining. But this inference should not be necessarily correct. The sustained export can be explained in two other ways. First, the Hindu merchants in Yarkand joined last year in a league, binding themselves not to compete against each other in the charas market. This arrangement had the desired effect of lowering prices which, in the spring of 1898, averaged Rs. 17-2 per maund, whilst, anterior to the formation of the league, they often were 100 per cent. higher. And, again, the Chinese authorities had, about April 1898, at Kashgar, issued orders prohibiting the growth of charas in Kashgaria. This prohibition, until the time when it was withdrawn, gave a stimulus to the charas trade in Yarkand, where merchants, believing that this drug would soon be unobtainable, invested in it to a larger extent than they would otherwise have done. Hence the abundance of export. But did this abundance react favourably on the demand in India? The Excise Department are certainly the authority best qualified to answer the question. Information received in Kashgar points, however, to a negative reply, *i.e.*, despite the large export, prices in India, enhanced by a duty of Rs. 2 per seer, still remained almost prohibitive. The cost in Yarkand of one maund of charas was, as above stated, Rs. 17-2. The carriage of this quantity to Ladakh approximated to Rs. 10; whilst its further conveyance to Hoshiarpur or Amritsar entailed an additional outlay of about Rs. 7. Thus the actual cost of one maund of charas, on delivering in the Punjab, was Rs. 34. But the average sale prices in India during the last winter did not seem to have been above Rs. 30. There had, therefore, been an average loss of Rs. 2 on each maund of charas.

Nor does the export of carpets, namdas, and pashm (wool) during 1898-99 appear to have shewn any increase over that of the preceding year. But merchants state that prices realized in Kashmir and India have been fair. The same remark is made with regard to the native cloth known as "chakman," which seems to have found a ready market amongst the natives of Ladakh. The export of gold and silver was considerable. But no profits were apparently made in British Indian territory on the sale of these metals, which were chiefly employed as a means for the transfer of capital. This was not always the rôle assigned to gold and silver. In former years, a Chinese silver Yuen-pao of 50 taels was worth Rs. 170 in India. Its present value fluctuates between Rs. 112 to Rs. 115. The gold exported during 1898-99 was obtained in Khotan and Yarkand at the average ratio of 1 to 25½. The remittance of Russian rubles to India which during 1898-99 was estimated at Rs. 85,000 fell during the present year to about Rs. 2,000, owing probably to the high rate of silver exchange which that currency note maintained in this country.

6. Whatever was the exact value of the exports to India in 1898-99, the imports to Turkistan during the same period would appear to have been both below that value, and less than the imports of 1897-98. This result ought not to be surprising when the decrease which has just taken place in the number of our Hindu traders is taken into consideration. The export as compared with 1897-98 has apparently fallen in the following goods :—Long-cloth, muslin, nainu and sainu gauzes, cotton prints, handkerchiefs, lungis, Benares brocades, atlas silks, broad-cloths, indigo, and skins.

7. The unsaleability of charas in India, a fact which must have paralyzed a considerable amount of capital money, must be held to be primarily responsible for the fall in the return trade.

8. This fall is also largely due to Russian competition, which without doubt is gaining yearly in severity. The inequality of circumstances, largely preponderating in favour of Russian trade, which have been alluded to in the 1897-98 report, have recently been still more emphasized by the opening of the Samarkand-Andijan Railway. The probable result of this will be a reduction of the cost of transport between Moscow and Kashgar, which before the opening of that railway was already as low as Rs. 11-5-9 per maund. The accompanying customs schedules, shewing the results of the Russo-Chinese Turkistan trade *viâ* Naryn and Irkishtan for the year 1897, which have been obtained through the courtesy of the Russian Consul-General at Kashgar, will give an idea of the value of this trade (rubles 4,235,571) as well as of the multifarious nature of the imports and exports. A comparison of these schedules with the returns of the Ladakh office will bring into evidence how diverse are the classes of goods in which both Russia and India stand as competitors in the markets of Kashgaria. Roughly speaking the following commodities are brought from both countries :—European cotton prints, red cottons (shalpar), velvet, atlas satins, long-cloth, broad-cloth, handkerchiefs, alpacca, dyes, cutlery, other skins, unmanufactured leather, sugar, saffron, and threads; whilst from India solely are imported indigo, muslin, nainu and sainu gauzes, European brocades, Benares brocades, turbans, medicines, spices, shawli rumal, tea, and coral. But even in some of these goods competition is indirectly felt. Thus Russian dyes diminish the demand for Indian indigo, and a sort of Russian chintz, mimicking the nainu and sainu gauzes, militates against the latter's sale.

9. The goods which are exported from Kashgaria and are in demand in Russia and India are the same in respect of carpets, namdas, "pashm" (wool) and "chakman" cloth. The value of the carpets and namdas exported to Russia during 1897 should have amounted, according to the schedules, respectively, to rubles 71,140 and rubles 149,041. This competition in buying goods for export tends to raise local prices; and is specially regrettable at the present juncture when, owing to the dulness of the charas market in India, Indian traders are constrained more than ever to turn their attention to the export of woollen goods.

It will be seen from the above that Russian competition affects us in our export, as well as in our import, trade.

10. The commercial relations which we have established through Chinese Turkistan with Russian Central Asia are by no means extensive, the only

articles exported thereto from India being tea, coral, brocades, spices, and certain medicinal plants. Tea is less than ever sent *viá* Kashgar to Russia, not that that commodity does not find a ready market in the Ferghana district, but because probably its carriage from India can be cheaper effected through Afghanistan and Persia than *viá* Ladakh.

11. The goods that find their way from Russia to British Indian territory appear to be less in value than those that travel in the opposite direction. But, despite this fact, it would not be improbable that, were freer communication permitted *viá* the Mintika and the Baroghil passes, Moscow chintz would carry the war of competition with Manchester cottons into our own territory of Gilgit and Chitral. It is noticeable that when a small caravan obtains a pass to travel *viá* Sarikol to Hunza or Gilgit, the goods carried by it are in a large measure of Russian manufacture, chiefly consisting of chintz, Bokhara silks and ready-made chogas. Moreover, a sort of Russian twilling known as "Shaitan-tari", seems to have found favour with the Lamas of Ladakh. In this connection an item in the Ladakh Trade Return for the year ending 31st March 1898, if enquired into, may bring forth some interesting facts. This return shows that 81 maunds of Indian manufactured cotton of the value of Rs. 5,265 had been exported *from* Turkistan to Ladakh. Doubtless it sometimes occurs that, owing to the dulness of the Yarkand market, goods are sent back to British territory. But it is not improbable that a portion at least of the cottons referred to was not of Indian, but of Russian, manufacture.

12. The general condition of our trade is evidently unpromising for the future. Signs are not wanting to show that, although there will always be a certain amount of commercial intercourse between India and Chinese Turkistan, this intercourse is on the eve of a marked restriction. It is encouraging to note, however, that whatever was the comparatively small value of the goods imported to Yarkand during the year 1898-99, the demand for them has been well maintained, and that up to date, out of their total quantity, there should not be more than about $\frac{2}{3}$ths still remaining unsold, the market having been fairly active in muslin, handkerchiefs, alwan (red cottons), lungis, velvet, and spices. Regarding the export trade of the year 1899-1900, it may be mentioned, as a somewhat surprising fact, that, despite all the adverse circumstances under which charas is labouring, no less than 1,500 pony-loads, or about 4,500 maunds, of this drug have already been purchased for the markets of India, and that before the departure of the caravans in August next 600 additional maunds are expected to be ready. This large export is due partly to the present extraordinary cheapness of charas, which in Yarkand is selling for about Tengas 120 or Rs. 15-7-8 per maund, and partly to the difficulty attending the purchase of Khotan gold, whose ratio to silver at present stands as high as 1 to 32. As the export of this metal is no longer profitable, and the supply of woollen goods and raw silk is limited, merchants have perforce invested in charas if only as a means for transferring their capital back to India.

KASHGAR AGENCY;
The 14th July 1899.

GEORGE MACARTNEY,
Special Assistant for Chinese Affairs to the Resident in Kashmir.

Table showing the imports from India, viâ Ladakh, and their proportional consumption in different parts of Chinese Turkistan, during the year 1898-99.

STATISTICS AND COMMERCE.

CUSTOMS.

No. 604 S. R., dated Calcutta, the 2nd February 1900.

READ—

Customs Circular No. 111 of 1900.

ORDERED, that the circular be published for general information in the Supplement to the *Gazette of India*.

J. F. FINLAY,
Secretary to the Government of India.

Customs Circular No. III of 1900.

From—The Under-Secretary to the Government of India, Finance and Commerce Department, No. 369 S. R., dated the 23rd January 1900.

To—The Secretary to the Government of Bengal, Financial Department.

I am directed to acknowledge the receipt of your letter No. 13 S. R., dated the 4th January 1900, proposing that "almonds without shell" should be assessed to customs duty *ad valorem* instead of at a tariff valuation, or that the present tariff valuation should apply to these articles only when imported in bulk, and not when packed in small tins and imported as oilman's stores.

2. In reply I am to say that the tariff valuation which is at a fixed rate per *cwt.* need only be applied to almonds imported in bulk. When almonds are imported in a retail way in tins, boxes, or bottles, the Collector may assess them *ad valorem.*

The Hon'ble Maharaja Rameshwara Singh Bahadur of Darbhanga.
The Hon'ble M. R. Ry. Panappakkam Ananda Charlu, Vidia Vinodha Avargal, Rai Bahadur, C.I.E.
The Hon'ble Kunwar Sir Harnam Singh Ahluwalia, K.C.I.E., of Kapurthala.
The Hon'ble Mr. J. T. Woodroffe.
The Hon'ble Mr. J. Buckingham, C.I.E.
The Hon'ble Mr. H. F. Evans, C.S.I.
The Hon'ble Rai Bahadur B. K. Bose, C.I.E.
The Hon'ble Mr. Allan Arthur.

QUESTION AND ANSWER.

The Hon'ble MR. SMEATON asked:—"Has the attention of the Government of India been called to great delays in deferred telegraphic traffic between

India and Burma? If so, what is the cause, and what, if any, steps are being taken to remove it, and to accelerate the telegraphic service between India and Burma?"

The Hon'ble SIR ARTHUR TREVOR replied:—"The attention of Government has been drawn to the delays referred to in the Hon'ble Member's question. The longest delays occurred between the 26th September and 10th October and again between the 25th December and 1st of January, and were primarily due to a great and sudden increase in this class of traffic all over India due to grain speculation. During the former period it unfortunately happened that the direct route, *i.e.*, *viâ* Chittagong and Akyab, was the only one available, the alternative route *viâ* Assam and Mandalay having been interrupted by the partial failure of the cables across the Ganges and Brahmaputra.

"There is no part of India with which it is so difficult to maintain telegraphic communication as with Burma, owing to the physical difficulties to be encountered in the shape of large and shifting rivers, hills and dense jungle, and although urgent and ordinary messages are exchanged between India and Burma in a reasonable time, it has not always been possible to cope satisfactorily with sudden and unexpected increases in the deferred traffic. Measures have, however, been taken to increase the efficiency of the present routes. An additional wire is now under erection between Akyab and Prome, which will be completed before the end of March, and Wheatstone's automatic quick working instruments, which have never hitherto been used in India, have been lately introduced on this route, and commenced working on 22nd January. A new copper wire has also been lately erected between Calcutta and Madras, and similar wires will shortly be completed between Calcutta and Bombay and Bombay-Madras, which will greatly improve the means of communication between India and Burma. Arrangements have also been made for completing another through route from Calcutta to Upper Burma *viâ* Manipur, which will provide an alternative line by a third route for a considerable distance. It is believed that these and other measures which have either been carried out or sanctioned, including a considerable increase in the signalling establishment, will enable the Department to cope successfully in future with all demands due to the growth of the deferred telegraph traffic.

"There has been a great increase in deferred as compared with ordinary and urgent traffic since the introduction of a system of hand delivery, the proportion of deferred messages to the whole traffic being over 66 per cent. in 1898-99, while it averaged less than 55 per cent. in the five years ending 1897-98. The public must not, however, forget, when resorting more freely to deferred messages, that they are still, what the name implies, messages which can only be sent through after the wires have been cleared of the urgent and ordinary traffic, that is usually during the night or after ordinary business hours. The Telegraph Department aims at the delivery of all deferred messages before business hours begin on the day following that in which the messages are tendered, or say before 10 A.M. If deferred messages are frequently delayed beyond this hour there is an indication that additional measures are required for coping with this traffic, but if the sender of a message desires earlier delivery he would do well to send it at the ordinary rate."

WHIPPING BILL.

The Hon'ble MR. IBBETSON presented the Report of the Select Committee on the Bill further to amend the Whipping Act, 1864.

INDIAN COMPANIES (BRANCH REGISTERS) BILL.

The Hon'ble MR. DAWKINS presented the Report of the Select Committee on the Bill to authorize certain Companies registered under the Indian Companies Act, 1882, to keep branch registers of their members in the United Kingdom.

TELEGRAPHIC PRESS MESSAGES BILL.

The Hon'ble MR. IBBETSON presented the Report of the Select Committee on the Bill to provide for the protection of certain telegraphic press messages. He said :—" We do not recommend that the Bill be republished, but I propose to wait a month before I ask the Council to consider our report, in order that the Press, which is so closely concerned, may have ample time to examine the considerable alterations which have been made in the Bill."

TRANSFER OF PROPERTY BILL.

The Hon'ble MR. RALEIGH moved that the Report of the Select Committee on the Bill to amend the Transfer of Property Act, 1882, be taken into consideration.

The motion was put and agreed to.

The Hon'ble MR. RALEIGH said :—" In introducing this Bill I called attention to the difficulties which the Courts had found in interpreting the provisions of Chapter VIII of the Transfer of Property Act. It was hoped that by a re-drafting of the chapter as it stood those difficulties might be met, but in consequence of the able note of the Chief Justice of Bombay we found ourselves compelled to go more thoroughly into the question and to re-draft not only the chapter in the Act, but to consider generally the law relating to actionable claims. The Bill on which the Select Committee reported is explained in the report, and before I move that it be passed, I have to propose only two amendments which, I hope the Council will take it from the learned Advocate-General and myself, are of a formal character. I beg to move in the first place that, in section 132, the latter part of the section be amended, and that the words which now run—'the liabilities and equities entitled to priority over the right of the transferor' should run 'the liabilities and equities to which the transferor was subject'."

The Hon'ble MR. WOODROFFE said :—" I beg to second this amendment. The words 'entitled to priority' were doubtless apt and fit in this section as the Bill stood when originally introduced into Council, but by the adoption in Committee of the more general expression 'liabilities and equities', the words which the Hon'ble Legal Member has moved to omit, have, as I think, been rendered unnecessary, and ought not to be retained. The section will, by their omission, be, in my opinion, freed from some ambiguity."

His Excellency THE PRESIDENT said :—" The question is that in section 132 of the Transfer of Property Act as amended by the Bill the words 'entitled to priority over the right of the transferor' be omitted, and that for the word 'he' the words 'the transferor' be substituted."

The motion was put and agreed to.

The Hon'ble MR. RALEIGH said :—" The other amendment I have to propose refers to sections 136 and 137 of the Transfer of Property Act. Section 136 runs: 'No judge, pleader, mukhtár, clerk, bailiff or other officer connected with Courts of Justice can buy any actionable claim falling under the jurisdiction of the Court in which he exercises his functions.' And then section 137 proceeds to deal with the important subject of the traffic in actionable claims by Judges, legal practitioners and officers of the Court, etc. I propose that these two sections should be transposed, so that the provisions of section 136 will apply to section 137."

The Hon'ble MR. WOODROFFE said :—" I beg to second the amendment which has just been moved by the Hon'ble Legal Member. The question has arisen in this way: it has been suggested that regard being had to the language of the present section 137, no legal practitioner could take a cheque in payment of his fees, a result which would, of course, be a serious matter for any

member of the profession to which I have the honour to belong, and that by placing section 136 after 137 which exempts from the application of this Act negotiable instruments, such as a cheque, the difficulty would be overcome."

His Excellency THE PRESIDENT said:—"The question is that sections 136 and 137 of the Transfer of Property Act as amended by the Bill be transposed, and be renumbered accordingly."

The motion was put and agreed to.

The Hon'ble MR. RALEIGH moved that the Bill as amended be passed.

The Hon'ble MR. WOODROFFE said:—"As one of the members of the Select Committee to which the Bill was referred, it may, perhaps, not be out of place were I to offer a few observations to the Council upon the principles which guided our consideration in Committee and the more salient amendments which were there introduced.

"The Transfer of Property Act is divided into chapters each purporting to deal exhaustively with its own subject-matter, and having thus dealt with transfers of property by act of parties in one chapter, sales of immovable property in another, mortgages and charges of such property in a third, and leases of immovable property, as also exchanges and gifts of property generally, in subsequent chapters, Chapter VIII deals with the transfer of actionable claims. So considering the Act it appeared to us unreasonable to suppose that the Legislature intended to deal in Chapter VIII with any of the matters for which that Act had already made specific provision, or to suppose that actionable claims were intended to cover every claim for which an action would lie in our Courts so as to include claims arising out of sales, gifts, mortgages, or leases of immovable property or exchanges or gifts of movable or immovable property within its provisions. Unhappily the term 'actionable claim,' which found no place in the original Bill as laid before the Law Commissioners in 1879, had not been defined, and section 130 having from the generality of its terms occasioned considerable difficulty in determining what was the true nature of the property dealt with in that chapter, we thought that the term should be so defined as to make it clear that actionable claims were property of the description known to English lawyers as 'choses in action,' and as such dealt with in England by the Supreme Court of Judicature Act of 1873. The definition arrived at by the Committee may, I venture to think, be taken to be a fairly correct description of that kind of property, and seeing that the term 'actionable claim' occurred elsewhere in that Act, the Committee placed the definition in the interpretation clause.

"One other and more salient matter has been the removal from the Transfer of Property Act, of section 135. The origin of that section will be found in the Roman Law, and was there known as *Lex Anastasiana*. It was intended to provide for cases of unfair sale. In an appeal from British Guiana, the only other part of Her Majesty's dominions in which that law found a place, the Privy Council declared that it could not, consistently with the ordinary principles which regulate the administration of justice in England, apply that law to cases where there was no taint of unfairness. The clause, moreover, was of this character, that while it pressed, or might press, harshly against the honest transferee of a book-debt for which he had paid less than the amount of that debt, regard being had either to the risk or delay of recovery, he might find himself, when he sued to recover it, obliged to take such debt less the cost which he had really paid for that risk. On the other hand, it afforded no protection against dishonest dealing, and did not apply to cases of gift at all. It was, therefore, open to any person who desired to deal dishonestly either to put forward the case of a transfer of an actionable claim as a gift or as a sale for a sum of money which he had not really paid. Moreover, the Courts of this country were at hopeless variance with one another upon this matter. The Courts of Allahabad and Madras took one view: Bombay agreed in part with Madras and in part with Calcutta. For these reasons it appeared desirable to omit this section altogether.

"The only other remaining section on which any observation appears to me needful is that which is now numbered 136, and to which there has been a considerable extension by the amendments introduced. As the section stood before such amendment, it was limited to such persons as were therein mentioned buying or trafficking in such claims in the Courts in which they were for the time being employed, but having regard to the fact that there are constant changes of Judges as well as officers, and that legal practitioners from all parts of the country may, from time to time, plead and appear in any Court, it seemed to be desirable to make the prohibition absolute as regards them all."

The motion was put and agreed to.

PRISONERS BILL.

The Hon'ble MR. RALEIGH moved that the Report of the Select Committee on the Bill to consolidate the law relating to Prisoners confined by order of a Court be taken into consideration.

The motion was put and agreed to.

The Hon'ble MR. RALEIGH moved that the Bill as amended be passed. He said :—"Your Lordship will remember that this Bill was introduced as a consolidation Bill, making no change in the substance of the law. The Committee conceived that though the Bill was accepted as a consolidation Bill, they were not precluded from considering amendments to remove obvious defects and inconsistencies discovered in the process of re-arranging the subject-matter of the law. After the Committee had reported, the Hon'ble the learned Advocate-General favoured me with a number of suggestions for the improvement of the law. Some of those suggestions were such as might have been considered by the Committee in accordance with the principle which I have just endeavoured to state, but others were amendments which perhaps made changes in the substance of the law and which ought to be circulated for opinion before they were adopted. I, therefore, asked the Hon'ble the learned Advocate-General to allow the Bill to pass in its present form on the understanding that an amending Bill will be taken in hand as soon as the state of our legislative business will admit, and on that understanding I now ask that the Bill as amended be passed."

The Hon'ble MR. WOODROFFE said :—"Strictly speaking and as indicated in the remarks of the Hon'ble Legal Member, the title of the Bill is a misnomer, and the preamble is incorrect. The Bill is not, as it left the Committee, a Bill merely to consolidate the existing law. It is a Bill that both consolidates and amends. There have been important amendments introduced, particularly in sections 19 and 20 of the Act as introduced into Council. There have also been other important changes made. Most of these, as far as I can judge, are not only material but salutary. There were, however, other matters which, as I ventured to think when my attention was invited to this Bill by the Hon'ble Legal Member, ought to have been taken into consideration. It is admitted that some of my suggested amendments are worthy of consideration. Some of these I would indicate now if it may be of any assistance hereafter in the Bill which I understand will be introduced for the purpose of amending this Bill. There are provisions in this Bill which seem to me to be in conflict with those of the law relative to the examination of witnesses either by the Civil or Criminal Courts. The Civil Procedure Code and the Criminal Procedure Code alike contain clauses for the examination of witnesses. There is no distinction drawn in these Codes as to witnesses who are in prison and witnesses who are not in prison, and there seems to be—apart from those considerations which would guide the executive as provided for by section 42 of the present Bill—no reason why all persons should not be liable to be examined, either directly or under commission, in the manner provided for by the Codes. I venture to think also that in section 40 of the present Bill the position of a High Court is not exactly that which it ought to be. Under that section the High Court is to apply to the Local Government, but it seems to me more

desirable that the High Court should certify and on such certificate the parties should apply. I merely indicate these points, and resting upon the assurance which has been given that there will be a Bill brought in to amend this Act, I abstain from moving any amendments ; though it is, I think, to be regretted that the Legislature should be in the position of bringing in a Bill in one session for the consolidation of the existing law, and then in a session or two later of bringing in another Bill to amend the Act which has been passed."

The motion was put and agreed to.

The Council adjourned to Friday, the 16th February, 1900.

CALCUTTA ;
The 7th February, 1900.

J. M. MACPHERSON,
Secretary to the Government of India,
Legislative Department.

OFFICIAL PAPERS.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, January 27th, 1900.

The shallow depression which had entered Lower Sind on Saturday, the 20th January had advanced by Sunday morning into South-East Rajputana and the adjacent districts of Central India, Gujarat and the Central Provinces. It gave light showers to Bikaner and in the central districts of the North-Western Provinces, the largest amount reported being half an inch at Mainpuri. The incipient depression in the Punjab had not changed in character, but it had given light to moderate snow to the North-West Himalayas and light rain to the Punjab submontane districts. Murree had received 1·12 inches, and Srinagar, Simla, Chakrata, Rawalpindi and Sialkot from half to three quarters of an inch. A rapid fall of the barometer in the Punjab on Monday developed this depression, but the precipitation given by it was confined chiefly to the hills and the East Punjab. The depression in South-East Rajputana had on Monday advanced into the central districts of the Central Provinces and had given general rain over the North-Western Provinces and showers in the east of Central India, Bihar and Chota Nagpur. Lucknow had received 1·48 inches and Cawnpore ·78 inch. The depression in the Punjab partially filled up during the next 24 hours, and on Tuesday morning was lying over the Simla and Mussooree hills and the adjacent submontane districts. The depression in the Central Provinces was unchanged in position, but had intensified slightly. Light to heavy rain and snow had fallen in the North-West Himalayas and light to moderate rain in the East Punjab, the west submontane and eastern districts of the North-Western Provinces, Bihar and the eastern states of Central India. Chakrata had received 2·11 inches, Mussooree 1·55 inches and Dehra Dun 1·19 inches. Both depressions practically filled up during the next 48 hours, but snow continued in the Eastern Upper India Hills on Wednesday and light to moderately heavy rain in the North-Western Provinces, while showers had fallen in the east of Central India and in Bihar. The largest amounts reported were: Allahabad 2·79 inches,

Gorakhpur 2·39 inches, Bareilly 1·48 inches, Chakrata 1·00 inch, Patna ·84 inch and Mussooree ·82 inch. Fine weather prevailed in India on Thursday and Friday, but another shallow depression was advancing eastwards from Persia and entered Gujarat on Saturday morning. It gave very light showers to Rajputana, the heaviest being one-tenth of an inch at Ajmer.

Daily Summary.—*Sunday, January 21st.*—Pressure had risen briskly in Baluchistan and had fallen briskly to rapidly in the Punjab, Rajputana and the North-Western and Central Provinces. The depression in Lower Sind on Saturday had advanced into South-East Rajputana and the adjacent districts of Central India, Gujarat and the Central Provinces. The incipient depression in the Punjab was unchanged. Light rain and snow had fallen in Baluchistan and the Upper India Hills and light rain in the Punjab plains (except in the south) and in the central districts of the North-Western Provinces. Bikaner received a light shower. Mean temperature was in very large defect in Baluchistan and Sind, in considerable defect in the Punjab and in slight defect in Rajputana. It was normal in Gujarat and in excess in all the remaining provinces.

Monday, January 22nd.—Pressure had fallen rapidly in the Punjab and slightly to briskly in the Central Provinces. The depression in the Punjab had intensified and the depression in South-East Rajputana on Sunday had advanced into the central districts of the Central Provinces. Rain had been general in the North-Western Provinces and was extending into Bihar and Chota Nagpur. Light rain and snow had fallen in the Upper India Hills and showers in the Punjab submontane districts and the east of Central India. Jubbulpore had received a shower. Mean temperature was in defect in North-West India and in excess elsewhere. Daily temperature was from 10° to 15° below the normal at a large number of stations in the North-Western Provinces, Punjab, Sind and Rajputana.

Tuesday, January 23rd.—Pressure had risen slightly to briskly in the North and Central Punjab and had fallen briskly over nearly the whole of the Peninsula, the North-Western and Central Provinces, Central India and Chota Nagpur. The depression in the Punjab had partly filled up and was lying over the Simla and Mussooree Hills and the adjacent submontane districts. The depression in the Central Provinces was unchanged in position, but had intensified slightly. Light to heavy rain and snow had fallen in the North-West Himalayas and light to moderate rain in the East Punjab, the west submontane and eastern districts of the North-Western Provinces, Bihar and the east of Central India. Mean temperature continued in defect in North-West India and in excess in other parts of the country. The variation from the normal was very large in Baluchistan, Sind and Gujarat, and large in the Punjab and Rajputana.

Wednesday, January 24th.—Pressure had risen generally, the rise being brisk to rapid over the greater part of the country, and both depressions had almost filled up. Light to moderate snow had fallen in the Eastern Upper India hill districts and light to moderately heavy rain in the North-Western Provinces. Showers had been received in the east of Central India and in Bihar. Temperature had fallen except in Madras, Burma and Assam. Extraordinarily low temperatures had been registered in Baluchistan and mean temperature was in considerable to very large defect in Sind, Rajputana, Gujarat, the Punjab and Central India. It was in considerable excess in the Central Provinces, Assam, Bengal and the Madras Deccan.

Thursday, January 25th.—The barometer had fallen briskly along the hills in Bengal and Assam, in Upper Burma and on the Konkan Coast, and had been steady or had risen slightly to rapidly elsewhere. Both depressions had practically filled up. Darjeeling and Colombo had received light showers of rain. Temperature had fallen very rapidly in Berar, the Central Provinces and Central India Mean temperature was in moderate to very large defect in North-West India, Berar, the Central Provinces, Central India, the West Coast and the Bombay Deccan. It was in large excess in Assam, Bengal and Chota Nagpur.

Friday, January 26th.—Pressure had fallen generally over the whole Indian region, the fall being most marked in Gujarat and the Central Provinces, and another shallow depression was advancing eastwards from Persia. Practically no rain had been reported. Temperature had risen rapidly to very rapidly in Sind, Gujarat, Central India, the Central Provinces, Berar and the

Bombay Deccan, and had fallen in Bihar, Chota Nagpur and Bengal. It was still in large excess in Bengal and Assam and normal or in slight to considerable excess in the Peninsula, but was below the normal elsewhere.

Saturday, January 27th.—Pressure had fallen briskly in Baluchistan, Sind and the adjacent districts of Gujarat and Rajputana. The shallow depression advancing eastwards from Persia was entering Gujarat and had given a few very light showers to Rajputana. Temperature had fallen rapidly in Bengal and Assam. Mean temperature was in defect over the whole of Northern India, with the exception of Chota Nagpur, Bengal and Assam, and in general excess in the Peninsula.

Temperature.—The most important feature in the past week's temperature conditions was the advance of a cold wave from the west which entered Baluchistan on Monday and advanced eastwards across Northern and Central India affecting Bengal and Assam at the end of the week. Extraordinarily low temperatures were registered in Baluchistan. At Quetta the minimum temperature on the night of the 22nd to 23rd fell to 8°·8 or 23° below the normal, and was followed by a still lower temperature on the next night, when the temperature registered was only 3°·3 or 27½° below the normal. These are the lowest temperatures on record at that station during the last twenty-two years, the lowest in previous years having been 9°·3 in 1897. On the same night temperature fell below 34° at Ajmer, Sambhar and Jaipur in Rajputana, the temperatures registered being from 12½° to 17½° below the normal at these stations.

The mean temperature of the whole province was from 10° to 12° in defect in Sind, Rajputana, Gujarat and Central India on the 23rd, 24th and 25th.

The mean temperature of the week has been in defect in the North-Western Provinces, the Punjab, Sind, Rajputana, Gujarat and Central India ; normal in the West Coast districts and above the normal in the remaining provinces. The largest variations below the normal have been in Sind (9°), Rajputana (6½°), Gujarat (6°) and the Punjab (5½°) ; and the largest variations in excess of the normal in Assam and the Madras Deccan (4°), and Orissa, Chota Nagpur, the Central Provinces, Berar and Mysore (3½°).

In Berar on Sunday mean temperature was 9½° in excess and on Thursday 6½° in defect. Almost as large changes occurred in Central India and the Central Provinces.

The following table gives mean temperature variation data of the week :—

Province.	Variation from normal of mean temperature of 24 hours preceding 8 A.M. of January							Mean variation of week.
	21st.	22nd.	23rd.	24th.	25th.	26th.	27th.

Bombay Deccan	+6·2	+6·0	+3·3	−0·3	−2·5	+2·6	+4·5	+2·8
Mysore	+3·2	+3·1	+2·6	+2·4	+3·5	+3·3	+5·4	+3·4
Madras Coast	+1·8	+1·4	+0·9	+1·3	+1·9	+1·2	+1·7	+1·5
Madras Deccan	+3·2	+3·9	+2·5	+3·7	+3·8	+4·6	+5·4	+3·9
South India	+2·0	+1·6	+1·2	+2·7	+2·9	+3·3	+3·3	+2·4
Mean for whole of India	+2·1	+1·8	+0·6	−0·7	−1·3	−0·6	+1·0	+0·4

The mean temperature for the whole of India was normal on the 23rd, 24th and 26th; in slight defect on the 25th and in slight to moderate excess on the 21st, 22nd and 27th; the variation ranging from +2°·1 on the 21st to −1°·3 on the 25th. For the whole week mean temperature was practically normal.

The following are the lowest minimum temperatures registered in the plains during the week:—

21st January,	D. I. Khan	38°·0
22nd „	Peshawar	36°·9
23rd „	Montgomery	34°·0
24th „	Peshawar	30°·9
25th „	Montgomery	31°·0
26th „	Montgomery	32°·0
27th „	Peshawar	35°·4

Rain.—The average rainfall of the division during the past week has exceeded a tenth of an inch in the Bengal Hills, Bihar, the North-Western Provinces, the Punjab (with the exception of the western division), the Baluchistan Hills and the eastern division of Central India. The amounts received have exceeded two inches in the east submontane (3·42 inches) and the Hills (2·49 inches) divisions of the North-Western Provinces, the Punjab Hills (2·39 inches), South Oudh (2·20 inches) and the eastern division of the North-Western Provinces (2·12 inches). The last three columns of the table at the end show that the rainfall of the previous December 31st to January 27th has been normal or in excess of the normal in Central Bengal, the Bengal Hills, Chota Nagpur, Bihar, the North-Western Provinces, the Punjab (with the exception of the southern division), the Baluchistan Hills, the central and eastern divisions of the Central Provinces, the eastern division of Central India, Malabar, Mysore, and South Central and South Madras.

The following gives the largest amounts received at individual stations during the week:—

	Inches.
North-Western Provinces—Machhlishahr (Jaunpur)	5·10
„ Phulpur (Allahabad)	4·15
„ Deogaon (Azamgarh)	4·89
„ Azamgarh	4·24
„ Bansgaon (Gorakhpur)	4·35
„ Najibabad (Bijnor)	4·19
„ Chakrata	4·27
Oudh—Kadipur (Sultanpur)	4·31
„ Mohanlalganj (Lucknow)	4·72
Punjab—Pathankot (Gurdaspur)	4·56
„ Dharmsala	4·00

W. A. BION,
for *Meteorological Reporter to the Government of India.*

SIMLA, *1st February, 1900.*

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 3rd February.*—There has been no rain during the week. Irrigation supplies are diminishing, and getting low in wells in parts. Sowings are confined to a small area under irrigation. Standing crops are suffering almost throughout. The principal harvest is proceeding in the Deccan districts; the yield is poor. Elsewhere the outturn is generally indifferent. Pasturage is scanty, but fodder suffices almost everywhere and cattle continue normal generally. Prices are generally slightly easier except in the Circars and Deccan, where they are very slightly dearer. No famine relief has yet been started, but test works are being organised in Cuddapah.

Bombay.—*For week ending 5th February.*—No rain has fallen during the week. The standing spring crops are in good condition in the Konkan, Bijapur, Belgaum and Baroda districts and in the irrigated lands in four districts of Gujarat and two of the Deccan. The spring crops have withered in Nasik, Satara and Dharwar, and have been slightly damaged by frost in Sind. The fodder supply is scanty in parts of Sind, the Deccan and the Karnatak. Cattle are suffering severely owing to insufficiency of fodder in Baroda, Rajkot and in three districts of Gujarat and five of the Deccan. Prices have fallen in five districts, risen in one and are stationary elsewhere.

The daily average numbers on relief are as follows.—British districts:—On test works, 26,830; on relief works, 658,746; dependants, 203,141; total on works, 888,717. In poor-houses, 16,040; on village relief, 44,959; total on gratuitous relief, 60,999. Native States:—On relief works, 266,153; dependants, 36,019; total on works, 302,172. In poor-houses, 23,141; on village relief, 7,471; total on gratuitous relief, 30,612. Grand total on relief, 1,282,500.

Bengal.—*For week ending 5th February.*—There was again general rain in the Patna and Bhagalpur Divisions and in all the districts of Chota Nagpur except Singhbhum. Slight showers are also reported from Burdwan, Birbhum, Murshidabad, Rajshahi, Dinajpur, Rangpur, Bogra and Mymensingh. In Patna considerable damage has been done to the spring and poppy crops by the recent hail-storms; in Gaya the damage done is slight, while in Shahabad, Saran and Monghyr it is partial. The reports of the spring crops from all other districts are good. Spring rice is doing well. Sugarcane is being cut and pressed and the earlier spring crops are being gathered. Fodder is suffici-

ent in every district, but there is scarcity of water in Chuadanga in Nadia. The price of rice is reported to have risen in 15 districts and fallen in 6 ; it is stationary in the remainder.

North-Western Provinces and Oudh.—*For week ending 7th February.*—There has been slight rain in the provinces since the 28th January, over half an inch falling in the Pilibhit, Benares, Mirzapur and Gorakhpur districts. Less than half an inch fell in other districts, while fourteen districts received no rain. The rain has considerably improved the standing spring crops which are generally well advanced. Some of the early crops are being harvested. The ploughing of land for extra sugarcane crops and for the next autumn crop is in progress. Slight injury to crops from excessive rain is reported from Fyzabad, and there has been injury in places from frost or rust. A severe hail-storm has done some injury to the crops in many districts, the damage being apparently most serious in Ghazipur and Kheri. Supplies and fodder are generally sufficient. Prices are almost stationary except in eight districts where they have slightly risen.

There were 3,160 persons on four relief works in the Jhansi district, and 261 persons on gratuitous relief. The poor-house contained 86 inmates. One test work in Agra was open, but there were no workers, while the Agra poor-house contained 11 persons, of whom 3 were immigrants. There were 205 inmates in the Muttra poor-house.

Punjab.—*For week ending 7th February.*—There was slight rain in Gurgaon and in parts of the Rohtak, Amballa, Gujrat, Jhelum and Rawalpindi districts. Ploughings for extra spring crops have commenced in Sialkot and for the sugarcane and melon crops in Amballa. Barley sowings continue in parts of Amballa. Extra spring crops are being sown in parts of Gurgaon and Sialkot. Sowings of inferior autumn crops have also commenced in Amballa. The condition and prospects of standing irrigated crops are said to be good or fair in Hissar, Rohtak, Gurgaon, Delhi, Karnal, Amritsar, Sialkot, Gujrat, Peshawar and in parts of the Dera Ismail Khan district. They are average to below average in Jullundur, Ferozepore, Mooltan, Rawalpindi and parts of Dera Ismail Khan. The recent rains have improved the standing crops in Hissar, Jullundur, Sialkot and Peshawar. The crops in Gurgaon are suffering for want of rain, insufficiency of water and cold winds, and rain is urgently wanted in Delhi, Gujrat and Shahpur. Crops are still being damaged by caterpillars in parts of Ferozepore. The condition of cattle continues fair in Karnal. They are dying of starvation in Gujrat and Shahpur and are weak and out of condition elsewhere for want of fodder. The prices of all food-grains are rising in Karnal, Jhelum and Dera Ismail Khan, and are unchanged in Delhi and Ferozepore. In other districts the prices are unsettled. Wheat is selling from 9¾ to 12 ; gram 10¾ to 13½ ; barley 11½ to 13 ; great millet 10¾ to 14 ; bulrush millet 9¾ to 12½ and maize 11¾ to 14 seers per rupee. Rice is being sold from 9 to 10 seers per rupee in Sialkot.

The average number on relief was as follows :—Relief workers :—Hissar, 69,055 ; Rohtak, 25,512 ; Gurgaon, 958 ; Delhi, 3,167 ; Mooltan, 1,057 ; Shahpur, 4,472. Dependants :—Hissar, 25,082 ; Gurgaon, 1,756 ; Delhi, 708 ; Karnal, 201 ; Mooltan, 428 ; Shahpur, 1,461. On test works :—Gurgaon, 9,378 ;

Karnal, 4,915; Amballa, 583; Ferozepore, 3,730; Lahore, 912; Amritsar, 709 Gujarat, 1,355; Jhelum, 213. Poor-house inmates:—Hissar, 3,313; Rohtak, 57; Gurgaon, 505; Delhi, 140; Shahpur, 99. Otherwise relieved:—Hissar, 15,780; Rohtak, 2,485; Gurgaon, 168; Karnal, 100. Test works have been closed in Bannu, as no labourers appeared. In addition to the above, 3,301 persons have been employed on relief works in the Native States. The details for each State are given below:—Relief works:—Jind, 748; Pataudi, 212; Loharu, 525; Dujana, 154. Gratuitously relieved:—Jind, 1,172; Pataudi, 296; Loharu, 134; Dujana, 60.

Burma.—*For week ending 3rd February.*—In Lower Burma the reaping of paddy continues in three districts. Threshing and winnowing are progressing. In Upper Burma the plucking of cotton has commenced in Thayetmyo. The reaping of wet weather paddy and the transplanting of dry weather paddy and cultivation of island crops continue. Crop prospects are good. Insects are reported to have done slight damage in the Madaya township of the Mandalay district. The price of paddy has fallen in Akyab and Myaungmya and slightly in Rangoon, Mandalay and Prome; and has risen in four districts.

Central Provinces.—*For week ending 6th February.*—The weather is occasionally cloudy. Heavy dew is reported in Saugor. Nights and mornings are generally cool, but the days are growing warm. Light showers of rain fell in parts of Jubbulpore, and hail in parts of Damoh and Mandla, the latter causing some damage to crops in the former district. Recent rain has benefited spring crops in Saugor, where a fair outturn is now expected, and has been of some advantage in the other northern districts. Harvesting operations have now generally commenced throughout the province; but the yields outside the Jubbulpore division are extremely poor. The scarcity of fodder and water is intensifying almost throughout the province. Prices have slightly fallen in Jubbulpore, Seoni and Wardha. There are local fluctuations in Saugor, Hoshangabad and Chanda. They are steady elsewhere. The cheapest prices are—wheat, 12; gram, 15; rice, 11⅞; juar, 12 seers per rupee. The dearest prices are—wheat, 8½; gram, 9½; rice, 8¾; juar 9½ seers per rupee.

There are 130 Public Works Department relief camps now open. The numbers on famine relief have slightly risen in Wardha, Nagpur, Bhandara and Balaghat, but considerable decreases are reported in some districts, especially in Raipur and in the Jubbulpore division, where harvest operations are likely to have more effect than elsewhere in reducing numbers. For the whole province there is a net decrease of 36,000. The numbers on relief during the week were as follows:—Relief works, Public Works Department, adults, 585,184; children, 88,152; village works, 271,191; grass-cutting works, 38,630; weaver relief, 22,654; total, 1,005,811. Dependants:—adults, 4,243; children, 102,324; total, 106,567. Gratuitous relief:—poor-houses, adults, 270; children, 100; kitchens:—adults, 17,160; children, 167,194; otherwise relieved:-adults, 110,352; children, 33,150; total on gratuitous relief, 328,226. Total on all forms of relief, 1,440,604.

Assam.—*For week ending 6th February.*—The weather is seasonable. Reaping of late rice is finished. In Nowgong the outturn is good. Pruning

of tea and the pressing of sugarcane continue, and mustard is being gathered. Ploughing for early rice is in progress. The prospects of mustard are generally good, and of sugarcane good in Sylhet and Lakhimpur; elsewhere they are indifferent. Fodder is scarce in Nowgong, the Naga and Khasia and Jaintia Hills and parts of Sylhet. Prices are:—Common rice, Silchar, 16 to 17; Dhubri and Tezpur, 16; Sylhet, 17½; Gauhati and Nowgong, 20; Sibsagar, 13; Dibrugarh, 12 seers per rupee.

Mysore and Coorg.—*For week ending 6th February.*—MYSORE: The standing wet crops are in fairly good condition in parts. Prices have slightly fallen in Bangalore and Shimoga. Ragi (*Eleusine coracana*) has been harvested in parts of Tumkur, Kadur and Shimoga. Fodder is reported scarce in Tumkur, Kadur, Hassan, Chitaldrug and Shimoga.

COORG.—Harvesting of rice continues. The ragi crop has been reaped and stacked. Coffee picking is almost completed. Prices of food-grains are rising. Water and fodder for cattle are sufficient.

Berar and Hyderabad.—*For week ending 31st January.*—BERAR: The weather is cool. The winter crops sown on well lands are in fair condition. Breaking up of land for the ensuing crop continues in parts of Akola, Amraoti, Basim, and Wun districts. Fodder is sufficient for present requirements in Basim, but inadequate elsewhere Water is scarce. Prices:—Akola, 9½; Amraoti, 11; Basim, 9¼; Buldana, 9; Ellichpur, 10¾; Wun, 12 seers per rupee.

Relief workers:—Akola, 69,126; Amraoti, 22,322; Basim, 31,315; Buldana, 126,825; Ellichpur, 15,689; Wun, 640. On gratuitous relief:—Akola, 755; Amraoti, 5,692; Basim, 5,842; Buldana, 2,129; Ellichpur, 3,063; Wun, 289. Occupants of poor-houses:—Akola, 343; Amraoti, 599; Basim, 775; Buldana, 398; Ellichpur, 520. Grand total on relief, 286,322.

HYDERABAD.—*For week ending 3rd February.*—There was no rain during the week. The total rainfall from the 1st January is 13 cents. The spring crops have dried up, but what little remains is under harvest. The winter rice cultivation is confined to land under wells. The water supply is quite inadequate and cattle are suffering for want of pasture and fodder. Distress is increasing in the Aurangabad Division. The prices of grain are almost stationary. Prices—wheat, 5¼; coarse rice, 6¼; jawari, 9½ seers per current sicca rupee.

Central India.—*For week ending 7th February.*—General rain fell in Baghelkhand during the week, but nowhere else in the Agency. Agricultural operations have been completed in Baghelkhand and are in progress elsewhere. There is no change in the condition of the standing crops, agricultural stock and pasturage. Prices are steady in Gwalior, high in Bhopal, above normal in Bundelkhand, below normal in Baghelkhand, rising in Malwa. The prices of staple food-grains are 12 seers in Gwalior; 9 to 12 in Bhopal; 11 to 14½ in Bundelkhand; 11 to 14 in Baghelkhand; 9¼ to 10¼ in Malwa; 8¼ to 9½ in Bhopawar.

Number on relief works:—Gwalior, 2,049, besides 1,652 on test works; Narsingarh, 1,618; Rajgarh, 1,609; Sehore, 692; Khilchipur, 395;

Seronj, 372; Bhopal, 367; Sandersi, 175; Suthalia, 117; Kurwai, 36; Maksudangarh, 24; Bundelkhand, 2,289; Nagode, 3,237; Maihar, 1,721; Sohagpur (Rewah), 1,470; Sohawal, 768; Neemuch Pargana of Gwalior, 2,391; Mundsaur, 118; Jaora, 2,057; Rutlam, 1,577; Sailana, 2,662; Sitamau, 625; Piploda, 406; Amjhera, 1,729; Dhar, 22,422; Barwani, 8,357; Alirajpur, 2,704; Jhabua, 6,201; Jobut, 2,326; Manpur, 269; Nimkhera, 249; Basoda, 104. On gratuitous relief:—Gwalior, 102; Rajgarh, 984; Sehore, 97; Khilchipur, 25; Bundelkhand, 531; Nagode, 159; Maihar, 120; Neemuch Pargana of Gwalior, 2,908; Jaora, 234; Rutlam, 842; Sailana, 157; Sitamau, 125; Piploda, 45; Barwani, 1,051; Alirajpur, 66; Jhabua, 1,511; Jobut, 200; Manpur, 10; Nimkhera, 21; Basoda, 81; Sirdarpur, 657.

Baroda.—*For week ending 27th January.*—There has been no change in agricultural prospects. The condition of agricultural stock is not satisfactory owing to dearth of fodder. The prices of food-grains are as follows:—bajri, 16; jowar, 22; wheat, 16; rice, superior, 12; inferior, 19, pounds of 40 tolahs per British rupee. The average number of persons employed on relief works in Baroda territory was 49,347 and the number on gratuitous relief 13,890.

Rajputana.—*For week ending 31st January.*—Excepting a few cents in Jodhpur, no rain fell during the week. The condition of the standing crops and cattle is unchanged. Prices are rising in four States and are steady in others. Prices:—Marwar, $8\frac{1}{2}$; Mewar, 8; Jhalawar, 9; Kotah, $7\frac{15}{16}$; Tonk, $9\frac{5}{8}$; Bundi, $8\frac{5}{8}$; Shahpura, $10\frac{1}{4}$; Ajmer, 10; Beawar, $10\frac{3}{4}$; Jaipur, $13\frac{3}{8}$; Kishangarh, $10\frac{1}{2}$; Bharatpur, $12\frac{5}{16}$; Alwar, $10\frac{15}{16}$; Bikaner, $8\frac{3}{4}$, seers the rupee.

The numbers employed on relief works are as follows:—Marwar, 79,060; Mewar, 74,705; Kotah, 12,345; Jhalawar, 1,000; Bundi, 5,346; Shahpura, 2,451; Tonk, 3,551; Ajmer, 26,315; Merwara, 63,205; Jaipur, 32,191; Kishangarh, 5,389; Bharatpur, 10,870; Alwar, 4,380; Bikaner, 26,834. On gratuitous relief:—Marwar, 21,465; Mewar, 13,527; Kotah, 1,658; Jhalawar, 800; Tonk, 1,502; Bundi, 312; Shahpura, 760; Ajmer, 3,508; Merwara, 14,026; Jaipur, 26,217; Kishangarh, 2,925; Bharatpur, 876; Alwar, 1,244; Bikaner, 7,471. Besides these, there were 872 persons in Bharatpur, 221 in Ajmer and 8,330 in Marwar returned as relieved by private charity. Total for all Rajputana, excluding figures for Jaisalmer and Sirohi which have not been received, on works, 347,642; gratuitous and charitable relief, 105,714. The rise in numbers on gratuitous relief includes about 8,000 for Bikaner not reported last week. Bundi reports 30, Shahpura 10, and Tonk 12, deaths from starvation.

Kashmir.—*For week ending 6th February.*—A little snow has fallen during the week. The weather continues frosty. Prices continue below normal. The price of rice is 27 seers the rupee.

JAMMU PROVINCE.—*For week ending 7th February.*—No rain. Prices generally stationary. Wheat is selling from $9\frac{3}{8}$ to 16; maize 12 to 18 seers the rupee. The condition of the standing crops is fair. Fodder is scarce.

Nepal.—*For week ending 3rd February.*—No rain fell during the week. The weather is foggy. Prospects of the wheat crop are good. The price of rice is 9 seers per rupee.

The number of persons in receipt of relief during the preceding and present weeks in each Province is shown in the following table:—

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from the Local Gazettes, and give the District details of the Provincial totals published weekly in the Crop and Weather Summary of the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons gratuitously relieved in poor-houses or at their homes.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

SELECTION OF TEXT-BOOKS FOR SCHOOLS.

No. 64—74.

Extract from the Proceedings of the Government of India in the Home Department (Education), dated Calcutta, the 8th February 1900.

READ—

Circular letter to Local Governments and Administrations, No. 153—62, dated the 23rd March 1899, asking for full reports on the system under which text-books are prescribed for all classes of schools and colleges and the constitution and powers of Text-book Committees.

Read also—

The replies of Local Governments to the above Circular.

RESOLUTION.

THE principles which should be followed in the selection of text-books in schools were affirmed by the Government of India several years ago. An investigation into the manner in which these principles have been followed in practice has satisfied the Governor General in Council that the directions of the Government of India have not unfrequently been ignored or contravened, and that it is desirable to issue fresh instructions based on those laid down in the past and to take steps to ensure that these are strictly carried into practice. In the present orders the Government of India propose to confine themselves to a consideration of the question as it affects primary and secondary schools and the lower classes of high schools which are not engaged in the study of text-books prescribed for the University Examinations. Before proceeding to state the principles that should be followed in selecting text-books for schools of this character, the Government of India think it desirable to give a brief account of the manner in which the existing orders on the subject originated.

2. After considering, in communication with Local Governments and Administrations, the recommendations of a Committee appointed in 1877 to inquire into the system of prescribing school books and to devise a complete scheme for general observance, the Government of India in the Home Department Resolution No. $\frac{1}{3-13}$, dated 10th January 1881, issued instructions as to the manner in which text-books should be selected. The principles then formulated were :—

(1) that provincial series of English and vernacular text-books should be maintained in preference to a single Imperial series;

(2) that the preparation and maintenance of the series of text-books for each Province should be left to the Local Governments assisted by Standing Committees, of which it was contemplated that the Directors of Public Instruction should be *ex-officio* Presidents;

(3) that these Committees should contain a fair intermixture of independent members whose choice of books could not be set down to professional or departmental bias;

(4) that the Committees of the different Provinces should communicate with one another in order that each might benefit by the experience of the others;

(5) that aided schools need not be restricted to the use of text-books authorized for Government institutions.

3. The Education Commission were instructed to inquire what practical steps were being taken to give effect to these orders in the case of both Government and aided institutions. The Commission (paragraph 388 of their report) limited the number of their recommendations on the subject of text-books because they did not consider it necessary to repeat the principles affirmed by the Government of India in 1881. They noticed, however, that the orders of 1881 had been imperfectly carried out in respect of the inclusion of independent members on the Standing Committees and the interchange of information between the Committees of different Provinces. They accordingly recommended that the Committees should include qualified persons of different sections of the community not connected with the Department, and that the Text-book Committees of the different Provinces should act, as far as possible, in concert and should communicate to each other lists of English text-books and (in the case of those Provinces which have any common language) of vernacular text-books which are satisfactory and lists of books which they consider to be wanting or inadequate. The few remaining recommendations of the Commission of a general character in regard to text-books referred to subjects not dealt with in the Resolution of the Government of India of 10th January 1881. It is only necessary here to refer to one of these recommendations, *viz.*, that to the effect that care should be taken to avoid, as far as possible, text-books which are of an aggressive character or likely to give unnecessary offence to any section of the community.

In approving these recommendations the Government of India stated that they attached much importance to the work of Text-book Committees, and that the whole question of text-books as discussed by the Education Commission in paragraphs 375—388 of their report was deserving of the special attention of Local Governments.

The Government of India have not, since they approved the recommendations of the Education Commission, issued any further general instructions regarding the selection of text-books.

4. The information which has recently come before the Government of India in response to an inquiry as to the manner in which the system of selecting text-books has been working shows that the cardinal principles, laid down by the Supreme Government in 1881 and re-affirmed in the report of the Education Commission and the orders upon it, have in some Provinces been gradually allowed to fall into disuse until the existing practice has ceased to conform to the directions of the Government of India. The result is that there is an absence of uniformity in the principles which regulate the selection of text-books in different parts of British India, and that in some Provinces the functions of the Local Government as the final authority by which text-books should be prescribed have been abdicated either in favour of the Educational Department or of the Text-book Committee.

5. The question of the constitution of the Committees may be first referred to. The Government of India contemplated that the President of the Committee in each Province should be the Director of Public Instruction, and that among those associated with him there should be a certain number of independent gentlemen. In the North-Western Provinces and Oudh, the Punjab, Burma, the Central Provinces, and Assam, the Director is the President of the Committee. In Madras the President of the Committee is a Professor at a private college. In Bengal there are three Committees. The Central Committee is presided over by a Judge of the High Court, and the Behar and Orissa Committees by non-officials. In the Hyderabad Assigned Districts there is no Committee at all. In Bombay there is no Committee for the examination of books in secondary schools. There are four Divisional Committees (the Kanarese, Guzarati, Marathi, and Sindhi Committees) for the examination of books used in primary schools, each presided over by an Inspector of Schools.

The Committees vary very much in size and constitution. In Madras there are 31 members, of whom 20 are Europeans and 10 are in the employment of Government. The Central Committee in Bengal consists of 24 members, of whom 5 are Europeans and 19 natives of India.

Fourteen members of it are Government servants mostly in the Education Department. The Behar Committee is composed of 31 natives and 2 Europeans and contains 20 Government servants. The Orissa Committee contains 5 Europeans and 11 natives, of whom 12 of its members are Government servants. In the Bombay Presidency the members of the Committees vary from 6 to 13, and the majority are native officers of the Education Department. In Burma there is a Committee of 7 (5 Europeans), of whom 4 are in Government service. In the North-Western Provinces and Oudh, there are 40 members of the Committee, of whom half belong to it *ex-officio*. The remainder are annually appointed: 5 by the Director of Public Instruction, 5 by the Missionary Education Union, and 10 by the Local Government. In the Punjab the Committee consists of 30 members, half appointed by Government and half by the University. In the Central Provinces the Committee numbers 20, of whom 18 are appointed *ex-officio* and 12 are Government servants. In Assam there are 10 members of the Committee for selecting books in Assamese, of whom 2 are Government servants. The text-books in English and Bengali must be selected from the list prepared for the use of schools in Bengal.

6. The functions of the Committees are almost as varied as their constitution. The detachment of the Committees from the control of the Educational Department and the Local Government is most marked in Bengal. Text-books are furnished direct to the Committees in that Province by Publishers and Authors. The Committees approve the text-books in secondary and primary schools, and the Director annually revises the list of text-books in accordance with their recommendations. The English and Bengali books on the list are used in Assam as well as in Bengal. In the Madras Presidency books are referred to the Committee by the Director of Public Instruction after a preliminary examination into their typography, paper, and general get-up. Those which are recommended by the Committee are, after the Director's approval, notified in the Gazette. In the Bombay Presidency the Director of Public Instruction refers vernacular books, after examination by the Educational Translator, to the Divisional Committees. The Committees report to the Director, who decides whether a particular book shall or shall not be approved. In the North-Western Provinces and Oudh the Committee are empowered to select school books for all vernacular and anglo-vernacular schools. The selection is subject to the confirmation of the Director, who keeps the Local Government informed of his decision. Books about which the Committee have not been consulted are sometimes prescribed by the Education Department with the approval of Government. In the Punjab the Committee merely recommend text-books; the Educational Department prescribes them. In the Central Provinces the Committee work in subordination to the Inspector-General of Education. In Burma the functions of the Committee are for the most part confined to the selection, preparation and submission for approval of vernacular text-books, and the translations of English text-books already selected. They are sometimes asked to report on the merits of the text-books in English which it is proposed to adopt.

7. The orders as to the obligation of the Managers and Head Masters of schools to use only prescribed books are different in different Provinces. In Madras the text-books in use in recognized schools are ordinarily selected from the list of approved books, but hitherto Head Masters and Managers of schools have not been absolutely restricted to the use of such books. In Bombay the selection of text-books published in England is left largely to the Managers and Head Masters of both Government and aided schools. The Director of Public Instruction published a list of such books in 1894. The only condition now imposed is that no book not included in that list shall be introduced into a school without the consent of the Circle Inspector. The use of English books published in India has to be sanctioned by the Director. With the exceptions that Mission schools are allowed to use their own readers subject to the approval of the Department, and that books in Arabic, Persian and Urdu are examined by special experts, both Government and aided schools are restricted to the use of vernacular text-books recommended by the Committee and approved by the Director. The Central Committee in Bengal have not published a list of books for use in the High Schools. A list is issued by each Inspector. Government

schools within the circle are required to use only books entered in the list. Managers of Aided schools usually follow this list, though they are not compelled to do so. In setting the course of reading for the different scholarship examinations in primary and secondary schools, the Director of Public Instruction prescribes books from the list approved by the Committee. The Managers and Head Masters of Aided as well as Government schools are required to select any other books used in their schools from this list. In the North-Western Provinces and Oudh no school in receipt of State aid can use any book for class instruction which has not been sanctioned by the Director; in the neighbouring Province of the Punjab text-books are prescribed for Government and Local Board schools only, and all other schools are absolutely free to choose their own books. In the Central Provinces the rules make no provision for the use of approved text-books only. Text-books prescribed by the Inspector-General of Education are used in all schools managed by the Department, and apparently also in schools managed by Local Bodies. In Burma the only text-books the use of which is compulsory, besides those prescribed for students reading for the University examinations, are those sanctioned by the Local Government for the standards of examination in schools and for the teachers' certificate examination.

8. The orders of the Government of India issued in 1881, while leaving matters of detail to the Local Governments, contemplated that uniformity should be observed in regard to the general principles for the selection of text-books. The account which is given above of the orders now in force shows that this essential object has not been attained under the present system. The Governor General in Council has now determined that no time should be lost in bringing the system of selecting text-books into accord with the principles which were laid down long ago, and which he now desires to re-affirm. But before doing so, he wishes to record his cordial and emphatic appreciation of the great assistance which the Provincial Text-book Committees have, for so many years past, rendered to the cause of education. The fact that the original basis upon which these institutions were constituted has in some respects been lost sight of, in no way detracts from the value of their labours—labours which have in the majority of cases been prompted solely by a sense of public duty.

9. In the first place, His Excellency in Council desires that the position of the Text-book Committees towards the Educational Department and the Local Governments and Administrations shall for the future be more precisely defined. It was never intended that these Committees should themselves prescribe the text-books to be adopted in schools. Their functions should be strictly limited to advising the Local Governments and Administrations. The ultimate decision as to the text-books which are to be prescribed or approved must rest with the Local Government or Administration, and all lists of authorized text-books should be periodically published under the authority of the Local Government in the official Gazette. It appears to the Government of India that there is a danger, if Committees are required to examine any text-book which may be brought to their notice from any source whatever, that the duty of recommending text-books may fall into the hands of a few members who may have more leisure than the rest. In order to prevent the possibility of this result, it would, the Government of India think, be desirable to make it a standing rule that no text-book shall be referred to a Committee until it has been forwarded to the Director of Public Instruction, and found, after a preliminary examination under his orders, to be a work upon which the opinion of the Committee ought to be taken. An arrangement of this nature will prevent the Committees from being, as has been the case in at least one instance, overwhelmed with applications for the examination of books which they find themselves incapable of properly examining.

10. Secondly, with regard to the constitution of the Text-books Committees, the Governor General in Council wishes to lay it down that it should be an invariable rule that the Director of Public Instruction should be the President of the Provincial Committee. In Provinces in which, owing to there being more than one vernacular in ordinary use, Sub-Committees have to be appointed to deal with text-books in each vernacular, an Inspector of the Educational Department should be either President or Secretary. Many of the

Committees now in existence are, in the opinion of the Governor General in Council, too large for the purpose for which they are intended. In the opinion of His Excellency in Council, a Provincial Committee of 20, in addition to the President, ought to be sufficiently comprehensive to secure the proper representation of all classes interested in the matter in even the largest provinces. When a Sub-Committee has to be appointed, it should ordinarily not consist of more than 5 members in addition to the President. The Government of India do not suggest that Local Governments and Administrations should at once proceed to reduce the Committees to this size, but they do desire to press upon them the need for taking action in this direction as vacancies occur upon the existing boards. Some of the Committees now in existence are, in the opinion of the Governor General in Council, not satisfactorily constituted as regards their *personnel*. The intention of the Government of India was that there should be on each Committee a fair admixture of independent members. This direction has been in some Provinces construed too liberally, with the result that the interests which Government represents are not sufficiently protected; sometimes because the non-official members of the Committee are too numerous, and sometimes because the official element consists mainly of subordinate members of the Educational service whose influence is not sufficiently strong to secure the adequate consideration of those interests. In some Provinces, again, the constitution of the Committees gives inadequate representation to some classes of the community. In the opinion of the Government of India, it is essential to arrange that the Committees shall be so constituted as, firstly, to secure that the proportion of non-official members to the representatives of Government shall not be unduly large, and secondly, that different interests shall be properly represented. It should not be difficult to procure the services in many cases of competent officers of Government who, though perhaps not members of the Educational service, can be relied on to take an earnest interest in the proceedings and objects of the Committee, and to facilitate the end for which the Committee has been called into existence, *viz.*, that only text-books to which no exception can be taken shall be prescribed in schools for the tuition in which the State is either directly or indirectly responsible. In this respect the Government of India cannot consent to divest itself of the responsibility that attaches both to its interest and to its prerogatives. If it is to lend the resources of the State to the support of certain schools, it cannot abrogate its right to a powerful voice in the determination of the course of studies which is there imparted. Otherwise its responsibility ceases to be any more than a name.

11. The Text-book Committee of 1877 recommended that the Committees should draw up a list of suitable books divided into two classes—the first class comprising books which might be used both in Government and in aided schools, and the second comprising books which, though not prescribed for use in Government schools, might be used in aided schools. It has already been mentioned that the Government of India, in passing orders on this report, determined that there was no necessity to restrict aided schools to the use of text-books authorized for Government institutions, but separate lists of text-books—the one for State, and the other for aided schools—have not been prepared. As a matter of practice, the text-books included in the lists framed on the advice of the Text-book Committees have, as stated in paragraph 7 of this Resolution, been in most Provinces used in aided as well as in Government schools. In the opinion of the Government of India, it should be definitely laid down that no books not authorized by the Local Government or Administration should be used in any school which receives support from public revenues. In the schools maintained by the Government or by Local Bodies a large list of text-books is not required. The course of instruction in each class of school should be laid down and the text-books for each particular course absolutely prescribed. In the case of aided schools a wider choice is required, and care should be taken that the authorized lists are so framed as to afford it. But the Managers of such schools should, as a condition of receiving a grant-in-aid from Government, be required to adopt no text-book which is not included in the list of text-books authorized by the Local Government without the sanction of the Local Government. The Govern-

ment of India entertain no doubt that, if the Manager of an aided school wishes to adopt a text-book not included in the authorized list, the Local Government will give every facility to have the book referred to the Text-book Committee with a view to its inclusion under the orders of Government in that list should it be found to be a suitable work. The functions of the State do not extend to the prescription of the text-books in unaided schools. But the Government has a direct interest in the course of instruction in schools which do not seek its aid financially, and, in the opinion of the Governor General in Council, the condition may fairly be made that candidates from an unaided school are liable to be excluded from any public examination, for passing which a certificate is given, or from competition for a Government scholarship if text-books which are disapproved by Government are in use at the school in question. Lastly, it appears to the Government of India that the Local Government in each Province and the Government of India should retain the right of prescribing a text-book on a particular subject for use in all schools, whether Government or aided, within a Province, or in British India generally. This power would be exercised only in exceptional circumstances, but it is, in the opinion of the Government of India, essential to retain it. As instances of the kind of works for which this exceptional power is required, the Governor General in Council would refer to the Sanitary Primer written by Dr. Cunningham, which was prescribed for all schools in 1879, and that written by Dr. Roberts which was prescribed in 1891.

12. In order that the Government of India may be kept informed of the manner in which the principles now prescribed for adoption in regard to text-books in schools are carried out by the different Local Governments and Administrations, it will be convenient that draft rules embodying them should be prepared by each Local Government and forwarded to the Government of India for information, and that each Director of Public Instruction should in his annual report describe the manner in which the rules are carried out in practice.

ORDER.—Ordered, that a copy of this Resolution be forwarded to all Local Governments and Administrations for information and necessary action.

Ordered also, that a copy of the Resolution be published in the *Supplement to the Gazette of India*.

No. 51 of 1900.—Henry Alonzo Buck, engineer, of 11, Montague street, Russell square, London, England. *A new method of and means for generating steam in steam engines.*

No 52 of 1900.—Henry Alonzo Buck, engineer, of 11, Montague street, Russell square, London, England. *An improved rotary engine.*

No. 53 of 1900.—Gilbert Wright, electrical engineer, of 409, Ross Avenue, Wilkinsburg, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements in circuit breakers.*

No. 54 of 1900.—Gilbert Wright, electrical engineer, of 409, Ross Avenue, and Christian Aalborg, electrical engineer, of 212, Franklin street, both of Wilkinsburg, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements in automatic circuit breakers.*

No. 55 of 1900.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburgh, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvement in alternating current induction motors.*

No. 56 of 1900.—Gilbert Wright, electrical engineer, of 409, Ross Avenue, and Christian Aalborg, electrical engineer, of 212, Franklin street, both of Wilkinsburg, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements in switches for electric circuits.*

No. 495 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, North-Western Provinces and Oudh. These and other specifications are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 201 of 1899.—Richard Joseph Ives, civil and mechanical engineer, residing at the Temperance Hall, Colaba, in the city of Bombay. *A sun-shade and rain-protector for bicycles or any other kind of machines of this class.* (Specification filed 6 January 1900.)

No. 282 of 1899.—John Bruce King Macbeth, Merchant, 18, Sirdar's Palace, Apollo Street, Bombay. *Improvements in punkahs.* (Specification filed 30 January 1900.)

No. 356 of 1899.—Thomas Henry Patching, Tailor, of Strathfield, in the colony of New South Wales, and Robert Hoskins Finch, builder of burwood, in the colony of New South Wales. *An automatic coupling for air brakes.* (Specification filed 26 January 1900.)

No. 413 of 1899.—Ludwig Weber, manager of Mercantile Mission Branch, Mangalore. *Improvements in flower pots.* (Specification filed 30 January 1900.)

No. 35 of 1899.—William Blaker, manufacturer, of 97, Queen Victoria Street, London, England. *An automatic rotary advertising device.* (Specification filed 26 January 1900.)

No. 436 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburgh, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements relating to the distribution of electric currents.* (Specification filed 26 January 1900.)

No. 449 of 1899.—Frank Gasper Stark, manufacturer, of 114, West 11th Street, in the borough of Manhattan, in the city of New York, in the county and state of New York, U. S. A. *Improvements in nut locks.* (Specification filed 26 January 1900.)

No. 462 of 1899.—Franz Gatzsche, manager, of Freiberg, Saxony, in the empire of Germany. *Improvements in soles and heels for boots and shoes.* (Specification filed 26 January 1900.)

No. 463 of 1899.—Franz Gatzsche, manager, of Freiberg, Saxony, in the empire of Germany. *Improvements in floor cloth, and in the method of manufacturing the same.* (Specification filed 26 January 1900.)

No. 496 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each:—

No. 207 of 1889.—Robert Henry Cave. *Improvements in and connected with indigo and other boilers.* (From 6 February 1900 to 6 February 1901.)

No. 177 of 1890.—Dadabhoy Ruttonjee Dalal. *A new and improved totalisator.* (From 1 February 1900 to 1 February 1901.)

No. 300 of 1893.—Giacomo Durio and Secondo Durio. *Improvements in and relating to tanning hides and skins and to apparatus therefor.* (From 2 February 1900 to 2 February 1901.)

No. 97 of 1895.—Robert Henry Cave. *An automatic vat opener.* (From 21 September 1900 to 21 September 1901.)

No. 302 of 1895.—Robert Henry Cave. *Improvements in the process of indigo manufacture.* (From 27 February 1900 to 27 February 1901.)

No. 394 of 1895.—Joseph Thomas Andrews. *Improvements in stair treads, landings, and coverings of subways, sewer outlets, and the like.* (From 6 February 1900 to 6 February 1901.)

No. 497 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act, V of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2) of the said Act, the exclusive privilege of making, selling and using the said inventions in British India, and of authorising others so to do, has ceased :—

No. 115 of 1895.—Joseph Hacking Riley. *Improvements in apparatus and process for bleaching textile and fibrous materials.* (Specification filed 1 November 1895.)

No. 116 of 1895.—Felice Balsamello and Domenico Mangani. *Improvements in and relating to stoves.* (Specification filed 1 November 1895.)

No. 117 of 1895.—Harold Jones. *An improved method and means of manufacturing tea.* (Specification filed 29 October 1895.)

No. 132 of 1895.—John Henry Rose Harley. *A punkah puller.* (Specification filed 30 October 1895.)

No. 145 of 1895.—Robert Thomson. *Improvements in apparatus for withering tea leaf.* (Specification filed 1 November 1895.)

No. 233 of 1895.—Ivan Ernest Middleton. *A non-banging door hinge.* (Specification filed 29 October 1895.)

Fee in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof.

The sum of R50 for each of the above inventions.

No. 197 of 1892.—Lieutenant-Colonel G. Henry and J. M. Campion. *A destructive incinerator.* (Specification filed 2 November 1893.)

Fee in respect of the continuance of an exclusive privilege—

4 (*c*) After the expiration of the fifth year and before the expiration of the sixth year from the date of the filing of the specification—

The sum of R50 for the above invention.

No. 280 of 1889.—Edward Konrad Reinold. *An improved sluice gate.* (Specification filed 31 October 1890.)

Fee in respect of the continuance of an exclusive privilege—

4 (*f*) After the expiration of the eighth year and before the expiration of the ninth year from the date of the filing of the specification.

The sum of R100 for the above invention.

NOTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be addressed to the "Secretary to the Government of India, Department of Revenue and Agriculture (PATENTS BRANCH), CALCUTTA."

The Office of the Secretary under the Act is open for the transaction of business from 11 A.M. to 4 P.M. on all days except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payble under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's office are now on sale to the public at one anna and eight annas a copy, respectively.

Attention is requested to the rules made by the Government on the 10th October, 1895, in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitor's room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified; or, if the tenth day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

S. C. HILL,
Offg. Secy. under the Inventions and Designs Act, 1888.

Rangoon and Moulmein . .	10th „	Ditto.
Akyab, Kyaukpyu and Sandoway.	10th „	Ditto.
Ditto ditto . .	12th „	Per land route *viâ* Chittagong.
Ditto ditto At 5-30 A.M.	13th „	Ditto
South Africa	12th „	Per Steamer *Umhlali.*
Ditto	13th „	*Viâ* Tuticorin and Colombo.
Mauritius and Réunion . .	12th „	Ditto.

*Although the date entered in column 2 is, as far as can be calculated, the latest safe date of posting for the next Mail Steamer, full allowance being made for the steamer being in advance of her published timing, Mails for the places mentioned in column 1 are despatched daily to Colombo, so that they may proceed by any steamer that has been unusually accelerated or retarded, or by any special opportunity that may be afforded by a steamer not belonging to one of the regular lines.

The letter-box for Inland articles will be cleared for the forenoon Mails at the following hours:—

For Goalundo and Chittagong Express train at 5-30 A.M.
For Eastern districts as far as Dacca at 6-30 A.M.
For Midnapore, Orissa and Madras Presidency at 7-30 A.M.
For Bombay Mail *viâ* Nagpur at 7-30 A.M. and with a late fee of ½ anna up to 8 A.M.
For Khulna Line at 8-15 A.M.

The letter-box will be cleared for the evening Mails without late fee at the following hours, *viz.*:—

For E. I. Railway Loop Mail at 2-30 P.M. and up to 2 55 P.M. with a late fee of ½ anna.

For Darjeeling and Assam at 3-25 P.M. without late fee, and 3-50 P.M. with late fee of ½ anna.
For the Bombay Mail *viâ* Jubbulpore carrying also Mails for Ceylon at 6 P.M.
For the Punjab Mail at 7-30 P.M.
For Midnapore District only at 7-30 P.M.
For Khulna Mail at 7-30 P.M.
For Eastern Bengal Mail at 7-30 P.M.

Late letters bearing a fee of ½ anna will be received for the Bombay Mail *viâ* Jubbulpore up to 6-30 P.M. and for other Mails from 7-30 to 8 P.M., and from 8-0 to 8-45 P.M. with a late fee of 1 anna for the Punjab and Eastern Bengal Mails only.

Late registered articles will be received between the following hours:—

For Offices served by the Bombay Mail *viâ* Allahabad and Jubbulpore from 5 P.M. to 6-15 P.M.
For Offices served by the Punjab Mail from 6 P.M. to 7 P.M.
For Offices served by the Eastern Bengal Mail from 6 P.M. to 7 P.M.
For Offices served by the Khulna Mail from 6 P.M. to 7 P.M.

The late fee on each registered letter will be two annas, which must be prepaid in stamps on the letter.

Articles for Burma and for Port Blair by Sea are received without late fee up to 7-30 P.M., after which hour they are received fully prepaid and bearing an extra stamp of ½ anna up to 8 P.M.

On the latest safe day of despatch of the Mail for the Australasian Colonies *viâ* Tuticorin, the letter-box for Foreign articles will be cleared for the last time for articles without the late fee at 6 P.M., and late letters and papers fully prepaid will be received up to 6-30 P.M.

On the day of despatch of the Mail for Europe (Thursday), the letter-box for Foreign articles will be cleared for the last time for articles without the late fee at 6-30 P.M., and late letters and papers fully prepaid will be received up to 6-45 P.M. Late registered articles will be received from 5 to 6 P.M. On other days the letter-box for Foreign articles will be cleared for the last time without the late fee at 6 P.M., and late letters and papers will be received up to 6-30 P.M. for despatch by any Foreign Mails *viâ* Tuticorin, Madras, or Bombay the same night and up to 8-30 P.M., late letters and papers up to 9 P.M., for any Foreign Mails despatched by Sea. The late fee for Foreign articles is 4 annas, which must be prepaid in stamps affixed to the articles.

JOHN OWENS,

Presidency Postmaster, Calcutta.

GEOLOGICAL SURVEY OF INDIA.

Catalogue of Books procurable from Thomason College Book Depot, Roorkee.

Application to be made to Curator.

CASH MUST ACCOMPANY ORDER. ARTICLES WILL BE SENT BY VALUE-PAYABLE POST TO PERSONS IN GOVERNMENT EMPLOYMENT ONLY.

It is advised that letters containing remittances be registered.

N.B.—The Revised Prices herein entered cover the cost of packing, postage, and other incidental charges (except commission for Value-payable supplies), and are for all purchasers other than resident College Students.

ROORKEE TREATISE ON CIVIL ENGINEERING IN INDIA.

Royal Octavo, with numerous Plates.

Volumes I and II are published in separate convenient sized Sections, as below, but can be bound up if required:—

VOLUME I.*

Section	I.	Building Materials (1898),	R2-0.
"	II.	Masonry (1898),	R1-4.
"	III.	Carpentry (1898),	R1-8.
"	IV.	Earthwork (1892),	R1-4.
"	V.	Tools and Plant (never published).	

VOLUME II.*

Section	VI.	Buildings (1899),	R1-4.
"	VII.	Bridges (1897),	R4-4.
"	VIII.	Roads (1897),	R1-8.
"	IX.	Railways (1891),	R1-4.
"	X.	Irrigation Works.	(Under revision.)

ROORKEE MANUAL OF APPLIED MECHANICS.

Vol. I. Direct and Transverse Strain, principally by Analytical Methods. R7

" II. The Stability of Structures, mostly by Graphic Methods (in the Press).

MANUALS.

VII. **Surveying** (by Major Firebrace, R.E.) (7th edition, with Curve Table). R3.

XIII. **Drawing** (by Lieut. R. Pulford, R.E.). † R6.

XIIIa. **Drawing, First Principles of Geometrical** (by do.) R1-4.

XIV. **Simple Applied Mechanics**, (3rd edition), Parts I and II in one. R1-8.

Simple Applied Mechanics, Part II (1st edition). 8a.

XV. **Examples of Estimating.** Comprising a progressive series of Estimates (with Plans of Buildings and Bridges, worked in detail). By P. Keay, Esq., and revised by C. C. Sullivan, Esq., Head Master (5th edition). R3-12.

XVI. **Earthwork Estimating**, with Practical Tables and Diagrams. By Major A. M. Brandreth, R.E. R1.

XVII. **Specimens of Printing** used in the College Drawing Course and Entrance Examinations. 6a.

Note.—The complete Treatise forms the course of the Civil Engineer and Upper Subordinate classes at the Thomason College in Civil Engineering. The other Manuals are the complete course for both Classes in the several subjects of which they treat.

MISCELLANEOUS.

ENGINEERING WORKS.

Curve Tables, complete, for laying any curve. 4a.

Scantlings of Timber for Roofs. Tables and investigation of formulæ for determining size of timbers for Flat Roofs from 8 to 22 feet span, and for Trussed Roofs from 16 to 50 feet span (2nd edition). By P. Keay, Esq., Head Master. 12a.

Notes on Chemistry of Building Materials. R1-8.

Tate's Mechanism. R1.

Barman's Descriptive Mineralogy. R2-4.

* Date of Edition on sale.
Originally published at R15, reduced to R6.

Useful Rules and Tables relating to Measurement of Timber. Rules for computing the cubic contents of Round Logs, as well as of Sawn Timbers, with Tables, etc. By Rai Kunhya Lal. R2-8.

O'Callaghan's Earthwork Tables for India. In one large sheet, 12a.; mounted on cloth and bound. R1-12.

Tables for Computing Earthwork in Distributaries and small open Channels, in use in Irrigation Department, N.-W. Provinces. 12a.

Tyndall's Hand-Book of Specifications. (In the Press)

The Indian Engineer's Pocket Book. R1

Wooden Bridges and Designs. By Rai Kunhya Lal. (In the Press.)

Blasting under Water (2nd edition). 10a.

Waugh's Instructions for Topographical Surveying) R1.

Analysis of Lime and Cement Stones. By Murray Thomson, Esq., M.D., F.R.S.E. 6a.

Chart, giving by a graphic method the discharges of earthen channels up to 40 feet bed width, very useful for Projects. R1-6

SCIENCE BOOKS.

Wilson's Inorganic Chemistry. R1-8,

MATHEMATICAL.

Solleau's Tables of Wages and Rent, and of the value of goods. Tables for converting Seers and Chittacks into decimals of a Maund, and Annas and Pies into decimals of a Rupee. With a few others of general utility (4th edition). R1-8.

Solleau's Tables of Log sin² ½ P (for computing time 4a)

Cape's Logarithms, with Tables of Squares, Cubes, etc. R1-4.

Cape's Geometry. R1-4.

Cape's Mechanics. 8a.

Todhunter's Plane Trigonometry. R2-8.

Todhunter's Differential Calculus. R2-8.

Military Topography. 8a.

HINDUSTANI

Elements of Hindustani Grammar. 8a.

Technical Dialogues—English and Urdu. R1.

A Vocabulary of Common and Technical Words in English-Urdu. 12a.

History of India (*Itihas Timirnásak*), Hindi, Parts I and II. Both 6a.

Short Account of Ganges Canal (English and Urdu). Each 4a.

NOTE AND FIELD-BOOKS, etc.

Note-Books (Section paper), large. Each R1-4.

Surveying Field-Books (ruled). 14a.

Levelling Field-Books (English Pattern). R1-4.

" " (Canal "). R1-4.

" " (College "). R2-0.

P. W. D. Note-Book. R1-4.

" **Measurement Book.** R1-4.

Circular Card-board Protractors, 12 inches. R2.

MISCELLANEOUS.

Distributary, Velocity and Discharge Table. By Capt. Allan Cunningham. 8a.

Description of Venomous Snakes. (The drawings of all the venomous snakes of Upper India, with description and all important information, extracted from the "Thanatophidia of India.") R1-8.

Ditto ditto in Urdu. R1-4.

Perspective (fully explained). By Col. A. M. Brandreth, R.E. R1-12

Thomason College Calendars for 1892,* 1895,† 1896† and 1897.† Each R2.

Ditto ditto for 1898‡, and 1899† Pt. I. R3-6.

* This does not contain the Entrance Examination papers of the Superior Accounts Branch, Public Works Department.

† These include question papers for entrance to Engineer and Upper Subordinate Classes and Superior Accounts Branch, Public Works Department.

‡ This does not contain the Entrance Examination Papers of the Upper Subordinate Class.

Forms of Accounts, P. W. D., for Sub-Divisional Officers, in English (very old). 4a.
Memo. of Instructions for Road Project. R1.
Project for College Mess (sample Project). 8a.
Ferrotype Printing Processes. 8a.
Thomason College Library Catalogue. R1-12.
Ditto, Supplement, 1895 to 1899. Each 2a.

Irrigation by Rajbahas,
Irrigation Tract, No. I.
" " " II. } 4a. each.
" " " III.

Land Measuring Chain Statement. Area of kucha and pucka Bighas, sheet. 4a.
Report of the Ganges Canal Committee (Major Crofton's Project for remodelling the Ganges Canal according to the views of Major-General Sir Arthur Cotton, R.E., K.C.S.I.), 1866. 8a.
Report of the Ganges Canal. By Captain J. Crofton, R.E., with Estimates and Plan—
Vol. I, Report, 1865. R1.
Vol II, Estimates 12a.

Shakesperian Readings, *viz.*:—
1. **Taming of the Shrew,**
2. **Othello,**
3. **Macbeth,** } Each 3a.
4. **Comedy of Errors,**
5. **Merchant of Venice,**

Annual examination papers set for the years 1867 to 1870, each 8a.

PLANS OF STATIONS.

Lithographed Plans of the Cantonments and Regimental Lines in the different Military Stations of India. Drawn to a uniform scale, and prepared between 1864 and 1868 for the Government of India, P. W. Department. (Useful for Executive Engineers' and Superintending Engineers' Offices.)

Bengal, 51 Plans.
Madras, 99 Plans.
Bombay, 91 Plans.
N.-W. Provinces, 104 Plans. } Whole lot R2. Each 6a.
Oudh, 21 Plans.
Rajputana, 4 Plans.
British Burma, 19 Plans.
Central Provinces.

A set of Professional papers both loose and quarterly numbers inclusive of Railway freight R10. This is not quite complete.

PROFESSIONAL PAPERS ON INDIAN ENGINEERING.

(FIRST SERIES.)

Vol. I. (Quarterly, Nos. 1 to 5), bound R1-8.
Quarterly, Nos. 1, 2, 3, 4, and 5,
Vol. II, Quarterly, Nos. 6 and 7, } 4a. each, inclusive of postage.
" VI, " No. 25,
" VII, " Nos. 26, 27, 28, and 29,
Extra No., April 1870.

(SECOND SERIES.)

Quarterly Numbers of Vols. I, II, and IX of the series, 4a. each, inclusive of postage.
Quarterly Number 41A of Vol. X. Each 8a.
Cloth covers for Volumes of 1st and 2nd Series, at 8a. each.
Index to Professional Papers and loose Papers, 1st and 2nd Series, at 2a. each.

FERROTYPE PRINTING.

Chemicals and Lithographic Paper for this process can be purchased from Thomason College Book Depôt. Application to be made to the Curator.
Apparatus for Printing can be made up at the Roorkee Workshops, and all particulars obtained from the Superintendent.

CIRCULARS.

Circulars containing the Rules of admission to the dif- ferent classes of the College will be forwarded to applicants.

J. CLIBBORN, *Lieut.-Col., I.S.C.,*
Principal, Thomason Civil Engineering College, Roorkee.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.

The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.

In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1876 :—

Terms of subscription payable annually in advance.

For the Complete Series, *including postage* . . . R22-8

	Without postage. R	a.	p.	With postage. R	a.	p.
For the Calcutta Series	10	0	0	12	8	0
" each of the Madras, Bombay, and Allahabad Series	6	0	0	7	0	0
" a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...			2	0	0
" a part of each of the Madras, Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	...			1	0	0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit :—

	For town. R	a	p.	For mofussil. R	a.	p.
For the Calcutta Series ; per copy . .	0	8	9	0	10	0
" each of the Madras, Bombay, and Allahabad Series ; per copy . . .	0	5	3	0	5	9
" the Calcutta Series. For the year . .	7	2	6	8	6	3
" each of the Madras, Bombay, and Allahabad Series. For the year . .	4	4	6	4	11	0

Persons desiring to subscribe for, or purchase, the Report should apply to—

Superintendent, Government Press, Madras.

The Superintendent, Government Central Press, Bombay.

The Curator of Government Books, North-Western Provinces and Oudh.

The Officer in charge, Bengal Secretariat Book Depôt.

Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrapped of the Indian Law Reports, Calcutta Series, at the following rates payable in advance :—

	One page.	*Half page.*	*Quarter page.*
For one issue	R 20	R 14	R 9
" three issues . . .	" 55	" 36	" 24
" six " . . .	" 100	" 68	" 45
" nine " . . .	" 145	" 96	" 64
" twelve " . . .	" 180	" 120	" 80

Several volumes of the BENGAL LAW REPORTS, from August 1868 to December 1875, and FULL BENCH RULINGS. Parts I and II, are available at the following rates :—

	Without postage. R	a.	p.	With postage. R	a.	p.
Bengal Law Reports, for one year . .	20	0	0	22	8	0

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta, Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription R22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calender year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

PURE SULPHATE OF QUININE.

Manufactured at the Bengal Government Cinchona Plantation.

From 1st April, 1898, the price of this Quinine will be as follows :—

1-pound tin,	R17,	or, post-free,	R17-12.
½	,,	R8-8,	,,	R9-0.
¼	,,	R4-4,	,,	R4-12.

Analysis shows this Quinine to be of the purest manufacture ; and it is guaranteed to be free from wilful mixture with the inferior alkaloids, Cinchonine and Cinchonidine. It is for sale only to Government officers, and only for cash, and may be had from the Superintendent, Botanic Garden, Seebpore, near Calcutta.

বঙ্গদেশের গবর্ণমেণ্টের সিন্‌কোনা আবাদে প্রস্তুত বিশুদ্ধ কুইনাইন।

১৮৯৮ সালের ১লা এপ্রেল হইতে এই কুইনাইনের নিম্নলিখিত মূল্য হইবে, যথা—

১ এক পৌণ্ড টিন		১৭৲ বা ডাকমাশুল বিনা		১৭৸৹
½ আধ ,,	,,	৮৷৹	,,	৯৲
¼ শিকি ,,	,,	৪৷৹	,,	৪৸৹

পরীক্ষা করিয়া দেখা গিয়াছে যে এই কুইনাইন অতি বিশুদ্ধ রূপে প্রস্তুত করা হইয়াছে, এবং ইহা যে সিন্‌কোনাইন ও সিন্‌কোনিডাইন নামক অপকৃষ্ট ক্ষারের সহিত ইচ্ছা পূর্ব্বক মিশান হয় নাই তাহার গারাণ্টী দেওয়া যাইতেছে। ইহা নগদ মূল্যে কেবল গবর্ণমেণ্টের কর্ম্মচারীগনের নিকট বিক্রয় করা যাইবে, এবং কলিকাতার নিকট শিবপুরের কোম্পানির বাগানের সুপারিণ্টেণ্ডেণ্টের নিকট পাওয়া যাইতে পারে।

CONTENTS.

PART I.

Government of India Notifications, Appointments, Promotions, etc.

HOME DEPARTMENT.

NOTIFICATIONS.

ESTABLISHMENTS.

Calcutta, the 16th February 1900.

No. 111.—Mr. J. Kennedy is permitted to resign Her Majesty's Indian Civil Service, with effect from the 20th February 1900 or the subsequent date on which he may sail from India or relinquish charge of office in the event of his not taking subsidiary leave.

MEDICAL.

The 14th February 1900.

No. 306.—The services of Lieutenant F. C. Nicolas, 7th Bengal Cavalry, are replaced at the disposal of the Military Department.

The 15th February 1900.

No. 313.—The services of Lieutenant O. A. G. FitzGerald, 18th Bengal Lancers, are replaced at the disposal of the Military Department.

SANITARY.

PLAGUE.

The 12th February 1900.

No. 364.—WHEREAS the Governor General in Council is satisfied that there is a danger of an outbreak of dangerous epidemic disease at Deoghur in the District of the Sonthal Parganas in Bengal if pilgrims or other persons from the Salem and Bellary Districts of the Madras Presidency, the Bombay Presidency (including Sind), the Allahabad District of the North-Western Provinces and Oudh, the Jullundur and Hoshiarpur Districts of the Punjab, the Nagpur District of the Central Provinces, and the Mysore and Hyderabad States are permitted to assemble at that place on the occasion of the Sripanchami, Sivaratri and Magh Purnima fairs:

In exercise of the powers conferred by section 2, sub-section (*1*), of the Epidemic Diseases Act (III of 1897), the Governor General in Council is pleased to direct that no tickets to travel by railway to the stations of Baidyanath Junction, Madhupur and Simultala on the East Indian Railway shall be sold from the date of this Notification to the 20th February 1900 (both days inclusive) within the Salem and Bellary Districts of the Madras Presidency, the Bombay Presidency (including Sind), the Allahabad District of the North-Western Provinces and Oudh, the Jullundur and Hoshiarpur Districts of the Punjab, the Nagpur District of the Central Provinces, and the Mysore and Hyderabad States to any person except on production of a certificate signed by an Executive officer of the Government that he is travelling for some purpose other than that of attending the fairs.

The 14th February 1900.

No. 410.—WHEREAS the Governor General in Council is satisfied that there is a danger of an outbreak of dangerous epidemic disease at Kadiri in the Cuddapah District of the Madras Presidency if pilgrims or other persons from the Mysore State are permitted to assemble at that place on the occasion of the ensuing Brahmotsavam festival of Lakshminarasimhaswami:

In exercise of the powers conferred by section 2, sub-section (*1*), of the Epidemic Diseases Act (III of 1897), the Governor General in Council is pleased to direct that no tickets to travel by railway to the stations of Malaka Yemala, Kalasamudram, Kadiri, Nallacheruvu and Tanakallu on the South Indian Railway shall be sold from the 3rd to the 24th March 1900 (both days inclusive) within the Mysore State to any pilgrim or other person intending or believed to be intending to proceed on pilgrimage to the Brahmotsavam festival of Lakshminarasimhaswami.

The 15th February 1900.

No. 420.—WHEREAS the Governor General in Council is satisfied that there is a danger of an outbreak of dangerous epidemic disease at Ahobilam in the Sirval taluk of the Kurnool District of the Madras Presidency if pilgrims or other persons from the Mysore and Hyderabad States are permitted to assemble at that place on the occasion of the ensuing Narasimhaswami festival:

In exercise of the powers conferred by section 2, sub-section (*1*), of the Epidemic Diseases Act (III of 1897), the Governor General in Council is pleased to direct that no tickets to travel by railway to the stations of Yerraguntla on the Madras Railway and Nandyal and Gazulapalli on the Southern Mahratta Railway shall be sold from the 11th to the 31st March 1900 (both days inclusive) within the Mysore and Hyderabad States to any pilgrim or other person intending or believed to be intending to proceed on pilgrimage to the Narasimhaswami festival.

The 16th February 1900.

NO 426.—The Notification of the Government of India in the Home Department, No. 513, dated the 17th February 1897, prohibiting the bringing of rags, used apparel and bedding, waste paper and used gunny bags from any port with regard to which rules against plague have been issued under section 1 of Act I of 1870 into any other port in British India, having been in part superseded by later Notifications of the Governor General in Council and in part become unnecessary, is hereby cancelled.

JUDICIAL.

The 16th February 1900.

No. 238.—The services of Captain H. G. B. Raitt, Cantonment Magistrate of Mooltan, are placed at the disposal of the Government of the North-Western Provinces and Oudh for employment as a Cantonment Magistrate.

ECCLESIASTICAL.

The 16th February 1900.

No. 85—The Reverend G. M. Davies, Chaplain of Nowgong, is appointed to be Chaplain of Mhow, Central India, with effect from the 1st February 1900 or from the subsequent date on which he may assume charge of his duties at Mhow.

EDUCATION.

The 16th February 1900.

No. 77.—THE Governor General in Council is pleased to appoint the following gentlemen to be Fellows of the University of Calcutta:—

Mr. J. A. Bourdillon, C.S.I., Commissioner, Patna Division.

Mr. D. Joscelyne, Secretary to the Government of Bengal, Public Works Department.

Lieutenant-Colonel G. F. A. Harris, I.M.S., M.R.C.P. (Lond.), Officiating Principal, Medical College, Calcutta.

Major D. Prain, I.M.S., M.B., Superintendent, Royal Botanical Garden, Calcutta.

Major H. J. Dyson, I.M S., F.R.C.S. (Eng.), Sanitary Commissioner, Bengal.

Mr. A. M. Dunne, B.A., LL.B., Barrister-at-Law.

Babu Chunder Narain Singh, M.A., Deputy Magistrate and Deputy Collector, Bengal.

Babu Jogenchunder Dutt, M.A.

Babu Jyotiprasad Sarbadhikari, M.A., B.L.

J. P. HEWETT,
Secretary to the Government of India.

DEPARTMENT OF REVENUE AND AGRICULTURE.

NOTIFICATIONS.

LAND SURVEYS.

Calcutta, the 13th February 1900.

No. 387—13-10.—Lieutenant F. C. Hirst, I.S.C., is appointed to the Survey of India Department on probation as an Assistant Superintendent, 2nd grade, with effect from 27th January 1900.

FORESTS.

The 13th February 1900.

No. 178-F.—65-4.—Mr. E. A. O'Bryen, Deputy Conservator of Forests, 3rd grade, Burma, is permitted, at his own request, to resign his appointment with effect from the 21st August 1899.

The 15th February 1900.

No. 189-F.—35-4.—Mr. G. F. Prevost, Deputy Conservator of Forests, 1st grade, Central Provinces, is permitted to retire from the service, with effect from the forenoon of the 23rd January 1900.

ARCHÆOLOGY AND EPIGRAPHY.

The 15th February 1900.

No. 672—11-2.—Mr. E. W. Smith is appointed to be Archæological Surveyor of the North-Western Provinces and Oudh Circle, with effect from the afternoon of the 28th October 1898.

No. 676—11-3.—Mr. E. W. Smith, Archæological Surveyor, North-Western Provinces and Oudh Circle, is granted, under Articles 282 and 283 of the Civil Service Regulations, three months' privilege leave, with effect from the forenoon of the 11th January 1900.

T. W. HOLDERNESS,
Secretary to the Government of India.

INDIAN EMPIRE.

NOTIFICATION.

Fort William: the 17th February, 1900.

No. 10-*I. E.*—His Excellency the Grand Master of the Most Eminent Order of the Indian Empire is pleased to announce that Her Majesty the Queen, Empress of India, has been graciously pleased to make the following appointment to the said Order:—

To be a Knight Grand Commander.

His Excellency the Right Honourable Henry Stafford, Lord Northcote of Exeter, C.B., Governor of the Presidency of Bombay.

By Order of the Grand Master,

W. J. CUNINGHAM,

Secretary to the Most Eminent Order of the Indian Empire.

FOREIGN DEPARTMENT.

NOTIFICATIONS.

Fort William, the 13th February 1900.

No. 804-*I.A.*—In exercise of the powers conferred by section 2, sub-section (*1*), of the Epidemic Diseases Act, 1897 (III of 1897), as applied by the Notification of the Government of India in the Foreign Department, No. 443-I. A., dated the 4th February 1897, to all territories in India which are under the administration of the Governor General in Council, but are not part of British India, including all railway lands and the territories for the time being administered by the Agent to the Governor General in Baluchistan as such Agent, the Governor General in Council is pleased to prohibit the bringing, taking, sending or consigning of used apparel and bedding (except when carried as the personal baggage of travellers), rags and waste paper from the Nagpur District of the Central Provinces into any part of the territories first aforesaid.

The 14th February 1900.

No. 275-*G.*—Captain O. G. Ievers, Indian Staff Corps, an Officiating Political Agent of the 3rd class, is posted temporarily as Second Assistant to the Resident at Hyderabad and Assistant Secretary for Berar, with effect from the 6th January 1900.

The 15th February 1900.

No. 838-*I. A.*—The services of Major T. F. MacNeece, Royal Army Medical Corps, are replaced at the disposal of the Home Department, with effect from the date on which he relinquishes charge of his plague duties at Bangalore.

The 16th February 1900.

No. 283-*G.*—Captain H. Daly, C.I.E., Indian Staff Corps, Deputy Secretary to the Government of India in the Foreign Department, is granted privilege leave for one month and four days, with effect from the 26th February 1900.

No. 284-*G.*—Mr. E. G. Colvin, of the Indian Civil Service, a Resident of the 2nd class and Revenue and Judicial Commissioner in Baluchistan, is appointed, on return from privilege leave, to officiate as Deputy Secretary to the Government of India in the Foreign Department, with effect from the 26th February 1900, *vice* Captain H. Daly, C.I.E., on privilege leave.

No. 285-*G.*—With reference to Notification No. 1873-G., dated the 7th December 1899, the provisional recognition of the appointment by the Government of India of Mr. Adolph Rehling as Consul for the Austro-Hungarian Empire at Rangoon, has been confirmed by Her Majesty's Government.

No. 289-*G.*—Major W. H. M. Stewart, Indian Staff Corps, a Political Agent of the 3rd (officiating 2nd) class, is posted, on return from privilege leave, as Political Officer with Sardar Ayub Khan, with effect from the date of assuming charge.

No. 293-*G.*—Captain C. M. Moore, M.D., Indian Medical Service (Bombay), is appointed to be an Agency Surgeon of the 2nd class, with effect from the 1st April 1899.

No. 842-*I. B.*—In exercise of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act, 1879 (XXI of 1879), and of all other powers enabling him in this behalf, the Governor-General in Council is pleased to make the following further amendments in, and additions to, the Berar Patels and Patwaris Law, published with the Notification of the Government of India in the Foreign Department, No. 10-I., dated the 1st January, 1886:—

1. For section 3 of the said Law the following section shall be substituted, namely:—

"3. (*1*) There shall not be more than one patel in a village officiating at one time, unless the duties of the office cannot be efficiently performed by one.

(*2*) Where there are two or more patels in a village, the Deputy Commissioner may,—

(*a*) if the duties of the office can, in his opinion, be efficiently performed by one patel, with the previous sanction of the Com-

missioner, direct that each patel shall hold office in turn by rotation for a term of not less than ten years;

(*b*) in any other case, distribute, subject to any rules made under section 21, the duties of the office among the patels in such manner as he may think fit."

2. To section 4 of the said Law the following proviso shall be added, namely:—

"Provided that, if the area includes a larger number of villages than the patwari can, in the opinion of the Deputy Commissioner, personally serve, the Deputy Commissioner may require the patwari to select the villages which he will and can personally serve. and shall then relieve him from the obligation of personal service in the remaining villages of his circle, and require him to nominate for them a substitute patwari."

3. After sub-section (*3*) of section 5 of the said Law the following sub-section shall be added, namely:—

"(*3a*) It shall be the ordinary condition of appointment to the office of patel or patwari that the person appointed shall, unless he is a minor or a woman, or unless he is exempted or relieved from personal service by or in pursuance of any provision of this Law or of the rules made under it, personally perform the duties of the office; and it shall be deemed a sufficient reason for refusing to appoint a person otherwise having a preferential claim to the office that he is unable or unwilling to comply with this condition:

Provided that, where a claim is set aside for this reason, the person preferring the claim may apply that some other member of his family able and willing to render personal service be appointed. and the Deputy Commissioner may appoint the person so designated to the office."

4. In section 7 of the said Law, for sub-section (*1*) the following sub-section shall be substituted, namely:—

"(*1*) Patels and patwaris shall be appointed to hold office either for life or, where rotation is permitted, for a term of not less than ten years."

5. For section 8 of the said Law the following section shall be substituted, namely:—

"8. (*1*) Every patel or patwari shall personally perform the duties of his office, unless he is exempted or relieved from such obligation, or declared to be disqualified or unfit for personal service, by or in pursuance of any provision of this Law or of the rules made under it:

Provided that an adult patel or patwari who is temporarily unable to perform his duties personally, may, with the previous sanction of the Deputy Commissioner, appoint a substitute to perform them for a period which shall be fixed by the Deputy Commissioner but shall in no case exceed one year.

(*2*) Every person who is a woman or a minor shall be disqualified for personal service as a patel or a patwari.

(*3*) The Deputy Commissioner may remove from office, or may declare to be unfit for further personal service, a patel or patwari on the ground of age, or mental or physical infirmity.

(*4*) Subject to such conditions and restrictions as may be imposed by rules made under section 21, and save as otherwise provided by any rules so made, a patel or patwari exempted or relieved from, or declared to be disqualified or unfit for, personal service may nominate for approval and appointment by the Deputy Commissioner a substitute to perform the duties of the office; and if he refuses or fails to nominate a substitute, or nominates a substitute of whom the Deputy Commissioner does not approve, the Deputy Commissioner shall select and appoint one.

(*5*) Every substitute appointed under sub-section (*4*) shall have the same powers and be subject to the same liabilities as the person in whose stead he is appointed would have and be subject to if he were personally performing the duties of the office."

6. In section 9 of the said Law, for sub-section (*2*) the following sub-section shall be substituted, namely:—

"(*2*) Where a substitute is performing the duties of the office of patel or patwari, he shall receive the whole of the emoluments appertaining thereto,

unless the Deputy Commissioner, for special reasons, to be recorded by him in writing at the time when the substitute is appointed, directs that he shall receive less."

7. In sections 13, 14 and 15 of the said Law, for the word "agent," wherever it occurs, the word "substitute," and for the words "an agent," wherever they occur, the words "a substitute," shall be substituted.

8. For section 21 of the said Law the following section shall be substituted, namely :—

"21. The Resident may, from time to time, make rules,—

(a) prescribing the qualifications of persons to be appointed as patels or patwaris or as substitutes for patels and patwaris ;

(b) defining the circumstances in which patels or patwaris on or after appointment to office may be exempted or relieved from, or declared unfit for, personal service, and determining the conditions and period of such exemption, relief or disqualification ;

(c) regulating the nomination, appointment, period of service, removal, dismissal, and remuneration of substitutes for patels and patwaris ;

(d) regulating the removal from office of patels and patwaris on the ground of personal unfitness or incapacity ;

(e) defining and distributing the duties of patels and prescribing the duties of patwaris ;

(f) regulating the division of emoluments between patels where there is more than one patel in a village ;

(g) prescribing the mode of service of notices under this Law ;

(h) regulating the procedure of the Commissioner and of Deputy Commissioners under this Law ; and,

(i) generally, for the guidance of the Commissioner and of Deputy Commissioners in all matters connected with the carrying out of this Law."

W. J. CUNINGHAM,
Secretary to the Government of India

No. 239 of 1899.—Henry Tindal, Baron, of 12, Sarphatikade, Amsterdam, in the Kingdom of Holland. *A new and improved apparatus for sterilizing liquids by means of ozone.* (Specification filed 7 February 1900.)

No. 240 of 1899.—Henry Tindal, Baron, of 12, Sarphatikade, Amsterdam, in the Kingdom of Holland. *An improved apparatus for generating ozone.* (Specification filed 8 February 1900.)

No. 241 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburg, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements in induction motors.* (Specification filed 8 February 1900.)

No. 242 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburg, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements in systems for converting the energy of alternating electric currents into mechanical energy by means of induction motors.* (Specification filed 8 February 1900.)

No. 367 of 1899.—Frederick Baker, builder, of "Maylands," Kambrook Road, Caulfield, near Melbourne, in the Colony of Victoria. *An improved nut-lock, principally adapted for railway purposes.* (Specification filed 8 February 1900.)

No. 439 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburg, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements in rotary transformers or synchronous motors.* (Specification filed 8 February 1900.)

No. 469 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburg, in the county of Allegheny, state of Pennsylvania, U. S A. *Improvements in systems of electrical distribution and regulation.* (Specification filed 8 February 1900.)

No. 474 of 1899.—John Rose, mechanic, of 135, Regent street, in the county of London, England. *Improved apparatus for displaying stereoscopic transparencies.* (Specification filed 9 December 1900.)

No. 476 of 1899.—Harry Phillips Davis, electrical engineer, of 327, Neville street, Pittsburg, in the county of Allegheny, state of Pennsylvania, U. S. A. *Improvements in fuse blocks for electric circuits.* (Specification filed 9 February 1900.)

No. 549 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each:—

No. 20 of 1889.—The Honourable Erastus Wiman. *Improvements in apparatus for crushing or pulverising ores and other substances.* (From 7 February 1900 to 7 February 1901.)

No. 290 of 1889.—Alexander Stanley Elmore. *Improvements in the electro deposition of metals and in apparatus used therein.* (From 8 February 1900 to 8 February 1901.)

No. 3 of 1893.—The Pneumatic Tyre and Booths Cycle Agency, limited. *Improvements in rubber tyres and metal rims or felloes of wheels for cycles and other light vehicles.* (From 21 February 1900 to 21 February 1901.)

No. 550 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (*2*), of the said Act, the exclusive privilege of making, selling and using the said inventions in British India, and of authorising others so to do, has ceased :—

No. 134 of 1895.—Charles Walke. *The safety trace hook.* (Specification filed 8 November 1895.)

No. 255 of 1895.—Conrad Field Mendham. *A new cap or stopper for sealing or fastening tins, cans, drums and the like, containing oils, paints, kerosene and other inflammable and explosive materials.* (Specification filed 9 November 1895.)

Fee in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof—

The sum of R50 for each of the above inventions.

No. 37 of 1888.—Thomas Toussaint Watson. *Pulling punkhas by a machine to be driven by water or steam power, compressed air, electricity, vacuum or other motive power.* (Specification filed 8 November 1888.)

Fee in respect of the continuance of an exclusive privilege—

4 (*b*) After the expiration of the tenth year and before the expiration of the eleventh year from the date of the filing of the specification.

The sum of R100 for the above invention.

NOTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be addressed to the "Secretary to the Government of India, Department of Revenue and Agriculture (PATENTS BRANCH), CALCUTTA."

The Office of the Secretary under the Act is open for the transaction of business from 11 A.M. to 4 P.M. on all days except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's office are now on sale to the public at one anna and eight annas a copy, respectively.

Attention is requested to the rules made by the Government on the 10th October, 1895, in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1895) lie in the visitor's room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified ; or, if the tenth day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

S. C. HILL,

Offg. Secy. under the Inventions and Designs Act, 1888.

APPOINTMENTS AND PROMOTIONS.

Agra, the 8th February, 1900.

No. 264.—Notifications Nos. 104 and 109, dated the 9th August, 1899, relating to the promotion of Messrs. F. W. Cash, G. H. McMullen, A. Potter and H. A. R. Lyon, are hereby cancelled.

R. M. DANE,
Commissioner, N. I. Salt Revenue Dept.

THE RESIDENT IN MYSORE.

NOTIFICATIONS.

Bangalore, the 8th February, 1900.

No. 662.—Whereas by the Notification of the Government of India in the Foreign Department, No. 2252-I., dated the 7th August, 1883, the Indian Christian Marriage Act, 1872, was, with certain modifications, declared to apply to the Civil and Military Station of Bangalore, so far as regards marriages between persons, one of whom is a Native Christian subject of Mysore, and neither of whom is a Christian British subject.

In exercise of the powers conferred by sections 6 and 9, respectively, of the Act, the Resident in Mysore is pleased—

(*a*) to grant a license to the Reverend George Christopher Walker, B.A., of the Wesleyan Mission, to solemnize marriages within the territories included in the Civil and Military Station of Bangalore; and

(*b* to grant a license to the said Reverend George Christopher Walker, B.A., authorizing him to grant certificates of marriage within the territories included in the Civil and Military Station of Bangalore between Native Christians, one of whom is a Native Christian subject of Mysore, and neither of whom is a Christian subject of Her Majesty.

No. 663.—In exercise of the powers conferred by sections 6 and 9, repectively, of the Indian Christian Marriage Act, 1872 (XV of 1872, as modified by Act II of 1891), and which have been delegated to him by the Governor-General in Council under section 86 of the Act by Foreign Department Notification No. 3747-I. B., dated the 1st October, 1897, the the Resident in Mysore is pleased—

(*a*) to grant a license to the Reverend George Christopher Walker, B.A., of the Wesleyan Mission, to solemnize marriages within the territories of Mysore, including the Civil and Military Station of Bangalore ; and

(*b*) to grant a license to the said Reverend George Christopher Walker, B.A., authorizing him to grant certificates of marriage between Native Christians within the said territories.

The powers hereby conferred are to be exercised only so far as regards Christian subjects of Her Majesty.

By order,

H. R. C. DOBBY,

First Assistant to the Resident.

DIRECTOR OF RAILWAY TRAFFIC.

NOTIFICATION.

Calcutta, the 15th February, 1900.

No. 12.—Mr. A. R. Hill, Assistant Locomotive Superintendent in Class III, grade 3, of the Superior Revenue Establishment of State Railways, is transferred from the North-Western Railway to the East Coast Railway.

A. BRERETON,

Director of Railway Traffic.

NORTH WESTERN RAILWAY.

NOTICE.

FOR SALE.

The Fleet of Steamers, Barges, Floating dock, and plant appertaining thereto, the property of the North Western Railway and now lying on the River Indus at Kotri, Sind.

A printed list giving full particulars of the above, and also conditions of sale, delivery, etc., can be obtained on application to the Locomotive and Carriage and Wagon Superintendent of the North Western Railway at Lahore.

NOTICE.

It is notified, for information of Military and Civil officers, that services of Shams-ul-Ulama, Shaikh Mahmud Gilani, Persian Instructor, and Mr. R. F. Azoo, Arabic Instructor, have been specially retained by Government for giving instruction to candidates intending to present themselves for examinations in Arabic and Persian before the Board of Examiners. Gentlemen requiring their tuition should communicate with them at the office of the Board of Examiners.

ROORKEE TREATISE ON CIVIL ENGINEERING IN INDIA.

Royal Octavo, with numerous Plates.

Volumes I and II are published in separate convenient sized sections, as below, but can be bound up if required:—

VOLUME I.*

Section	I.	Building Materials (1898),	R2-0.
"	II.	Masonry (1898),	R1-4.
"	III.	Carpentry 1898),	R1-8.
"	IV.	Earthwork (1892),	R1-4.
"	V.	Tools and Plant (never published).	

VOLUME II.*

Section	VI.	Buildings (1899),	R1-4.
"	VII.	Bridges (1897),	R4-4.
"	VIII.	Roads (1897),	R1-8.
"	IX.	Railways (1891),	R1-4.
"	X.	Irrigation Works.	(Under revision.)

ROORKEE MANUAL OF APPLIED MECHANICS.

Vol. I. Direct and Transverse Strain, principally by Analytical Methods. R7

" II. The Stability of Structures, mostly by Graphic Methods (in the Press).

MANUALS.

VII. **Surveying** (by Major Firebrace, R.E.) (7th edition, with Curve Table). R3.

XIII. **Drawing** (by Lieut. R. Pulford, R.E.). † R6.

XIIIa. **Drawing, First Principles of Geometrical** (by do.) R1-4.

XIV. **Simple Applied Mechanics**, (3rd edition), Parts I and II in one. R1-8.

Simple Applied Mechanics, Part II (1st edition). 8*a*.

XV. **Examples of Estimating**. Comprising a progressive series of Estimates (with Plans of Buildings and Bridges, worked in detail). By P. Keay, Esq., and revised by C. C. Sullivan, Esq., Head Master (5th edition). R3-12.

XVI. **Earthwork Estimating**, with Practical Tables and Diagrams. By Major A. M. Brandreth, R.E. R1.

XVII. **Specimens of Printing** used in the College Drawing Course and Entrance Examinations. 6*a*.

Note.—The complete Treatise forms the course of the Civil Engineer and Upper Subordinate classes at the Thomason College, in Civil Engineering. The other Manuals are the complete course for both Classes in the several subjects of which they treat.

MISCELLANEOUS.

ENGINEERING WORKS.

Curve Tables, complete, for laying any curve. 4*a*.

Scantlings of Timber for Roofs. Tables and investigation of formulæ for determining size of timbers for Flat Roofs from 8 to 22 feet span, and for Trussed Roofs from 16 to 50 feet span (2nd edition). By P. Keay, Esq., Head Master. 12*a*

Notes on Chemistry of Building Materials. R1-8.

Tate's Mechanism. R1.

Barman's Descriptive Mineralogy. R2-4.

* Date of Edition on sale.

Originally published at R15, reduced to R6.

Useful Rules and Tables relating to Measurement of Timber. Rules for computing the cubic contents of Round Logs, as well as of Sawn Timbers, with Tables, etc. By Rai Kunnya Lal. R2-8.

O'Callaghan's Earthwork Tables for India, in one large sheet. 12a.; mounted on cloth and bound. R1-12.

Tables for Computing Earthwork in Distributaries and small open Channels, in use in Irrigation Department, N.-W. Provinces. 12a.

Tyndall's Hand-Book of Specifications. (In the Press.)

The Indian Engineer's Pocket Book. R1.

Wooden Bridges and Designs. By Rai Kunhya Lal. (In the Press.)

Blasting under Water (2nd edition). 10a.

Waugh's Instructions for Topographical Surveying) R1.

Analysis of Lime and Cement Stones. By Murray Thomson, Esq., M.D., F.R.S.E. 6a.

Chart, giving by a graphic method the discharges of earthen channels up to 40 feet bed width, very useful for Projects. R1-6.

SCIENCE BOOKS.

Wilson's Inorganic Chemistry. R1-8.

MATHEMATICAL.

Boileau's Tables of Wages and Rent, and of the value of goods. Tables for converting Seers and Chittacks into decimals of a Maund, and Annas and Pies into decimals of a Rupee. With a few others of general utility (4th edition). R1-8.

Boileau's Tables of Log sin² ½ P (for computing time 4a.)

Cape's Logarithms, with Tables of Squares, Cubes, etc. R1-4.

Cape's Geometry. R1-4.

Cape's Mechanics 8a.

Todhunter's Plane Trigonometry. R2-8.

Todhunter's Differential Calculus. R2-8.

Military Topography. 8a.

HINDUSTANI

Elements of Hindustani Grammar. 8a.

Technical Dialogues—English and Urdu. R1.

A Vocabulary of **Common and Technical Words** in English-Urdu. 12a.

History of India (*Itihas Timirnásak*), Hindi, Parts I and II. Both 6a.

Short Account of Ganges Canal (English and Urdu) Each 4a.

NOTE AND FIELD-BOOKS, etc.

Note-Books (Section paper), large. Each R1-4.

Surveying Field-Books (ruled). 14a.

Levelling Field-Books (English Pattern). R1-4.

" " (Canal "). R1-4.

" " (College "). R2-0.

P. W. D. Note-Book. R1-4.

" **Measurement Book.** R1-4.

Circular Card-board Protractors, 12 inches. R2.

MISCELLANEOUS.

Distributary, Velocity and Discharge Table. By Capt. Allan Cunningham. 8a.

Description of Venomous Snakes. (The drawings of all the venomous snakes of Upper India, with description and all important information, extracted from the "Thanatophidia of India.") R1-8.

Ditto ditto in Urdu. R1-4.

2. Othello, }
3. Macbeth, } Each 3a.
4. Comedy of Errors, }
5. Merchant of Venice, }

Annual examination papers set for the years 1867 to 1870, each 8a.

PLANS OF STATIONS.

Lithographed Plans of the Cantonments and Regimental Lines in the different Military Stations of India. Drawn to a uniform scale, and prepared between 1804 and 1808 for the Government of India, P. W. Department. (Useful for Executive Engineers' and Superintending Engineers' Offices.)

Bengal, 51 Plans.	Whole lot R2. Each 6a.
Madras, 99 Plans.	
Bombay, 91 Plans.	
N.-W. Provinces, 104 Plans.	
Oudh, 21 Plans.	
Rajputana, 4 Plans.	
British Burma, 19 Plans.	
Central Provinces.	

A set of Professional papers both loose and quarterly numbers inclusive of Railway freight R10. This is not quite complete.

PROFESSIONAL PAPERS ON INDIAN ENGINEERING.

(FIRST SERIES.)

Vol. I. (Quarterly, Nos. 1 to 5), bound R1-8.

Quarterly, Nos. 1, 2, 3, 4, and 5,	4a. each, inclusive of postage.
Vol. II, Quarterly, Nos. 0 and 7,	
" VI, " No. 25,	
" VII, " Nos. 20, 27, 28, and 29,	
Extra No., April 1870.	

(SECOND SERIES.)

Quarterly Numbers of Vols. I, II, and IX of the series, 4a. each, inclusive of postage.

Quarterly Number 41 A of Vol. X. Each 8a.

Cloth covers for Volumes of 1st and 2nd Series, at 8a. each.

Index to Professional Papers and loose Papers, 1st and 2nd Series, at 2a. each.

FERROTYPE PRINTING.

Chemicals and Lithographic Paper for this process can be purchased from Thomason College Book Depôt. Application to be made to the Curator.

Apparatus for Printing can be made up at the Roorkee Workshops, and all particulars obtained from the Superintendent.

CIRCULARS.

Circulars containing the Rules of admission to the different classes of the College will be forwarded to applicants.

J. CLIBBORN, *Lieut.-Col., I.S.C.,*
Principal, Thomason Civil Engineering College, Roorkee.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.

The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.

In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1876 :—

Terms of subscription payable annually in advance.

For the Complete Series, *including postage* . . . R22-8

	Without postage.			With postage.		
	R	a.	p.	R	a.	p.
For the Calcutta Series	10	0	0	12	8	0
„ each of the Madras, Bombay, and Allahabad Series	6	0	0	7	0	0
„ a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...			2	0	0
„ a part of each of the Madras, Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	...			1	0	0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit :—

	For town.			For mofussil.		
	R	a	p.	R	a.	p.
For the Calcutta Series ; per copy . .	0	8	9	0	10	0
„ each of the Madras, Bombay, and Allahabad Series ; per copy . . .	0	5	3	0	5	9
„ the Calcutta Series. For the year . .	7	2	6	8	6	3
„ each of the Madras, Bombay, and Allahabad Series. For the year . .	4	4	6	4	11	0

Persons desiring to subscribe for, or purchase, the Report should apply to—

Superintendent, Government Press, Madras.

The Superintendent, Government Central Press, Bombay.

The Curator of Government Books, North-Western Provinces and Oudh.

The Officer in charge, Bengal Secretariat Book Depôt.

Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrapped of the Indian Law Reports, Calcutta Series, at the following rates payable in advance :—

	One page.	Half page.	Quarter page.
For one issue	R 20	R 14	R 9
„ three issues	„ 55	„ 36	„ 24
„ six „	„ 105	„ 68	„ 45
„ nine „	„ 145	„ 96	„ 64
„ twelve „	„ 180	„ 120	„ 80

Several volumes of the BENGAL LAW REPORTS, from August 1868 to December 1875, and FULL BENCH RULINGS. Parts I and II, are available at the following rates :—

	Without postage.			With postage.		
	R	a.	p.	R	a	p.
Bengal Law Reports, for one year . .	20	0	0	22	8	0
Single copies, R2 per copy.						
Full Bench Rulings, Parts I and II . .	20	0	0	22	8	3

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta,

Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription R22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calender year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

PURE SULPHATE OF QUININE.

Manufactured at the Bengal Government Cinchona Plantation.

From 1st April, 1898, the price of this Quinine will be as follows :—

1-pound tin,	R17,	or,	post-free,	R17-12.
½ „	R8-8,		„	R9-0.
¼ „	R4-4,		„	R4-12.

Analysis shows this Quinine to be of the purest manufacture ; and it is guaranteed to be free from wilful mixture with the inferior alkaloids, Cinchonine and Cinchonidine. It is for sale only to Government officers, and only for cash, and may be had from the Superintendent, Botanic Garden, Seebpore, near Calcutta.

বঙ্গদেশের গবর্ণমেণ্টের সিন্‌কোনা আবাদে প্রস্তুত বিশুদ্ধ কুইনাইন।

১৮৯৮ সালের ১লা এপ্রেল হইতে এই কুইনাইনের নিম্নলিখিত মূল্য হইবে, যথা—

১ এক পৌণ্ড টিন	১৭৲ বা ডাকমাশুল বিনা ১৭৷৷৹		
৷ আধ „ „	৮৷৷৹	„	৯৲
। শিকি „ „ ।	৪।৹	„	৪৷৷৹

পরীক্ষা করিয়া দেখা গিয়াছে যে এই কুইনাইন অতি বিশুদ্ধ রূপে প্রস্তুত করা হইয়াছে, এবং ইহা যে সিন্‌কোনাইন ও সিন্‌কোনিডাইন নামক অপকৃষ্ট ক্ষারের সহিত ইচ্ছা পূর্ব্বক মিশান হয় নাই তাহার গারাণ্টী দেওয়া যাইতেছে। ইহা নগদ মূল্যে কেবল গবর্ণমেণ্টের কর্ম্মচারীগণের নিকট বিক্রয় করা যাইবে, এবং কলিকাতার নিকট শিবপুরের কোম্পানির বাগানের সুপারিণ্টেণ্ডেণ্টের নিকট পাওয়া যাইতে পারে।

PUBLIC WORKS DEPARTMENT.

NOTIFICATION.

Simla, the 20th September, 1893.

A Registry Office for men of all grades out of employ is kept up by the Principal, Thomason College, Roorkee. Officers requiring men are requested to apply to Principal.

J. CLIBBORN, *Major, I.S.C.,*

Principal, Thomason College.

PART IV.

Acts of the Governor General's Council assented to by the Governor General.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Act of the Governor General of India in Council received the assent of the Governor General on the 16th February, 1900, and is hereby promulgated for general information :—

ACT No. IV OF 1900.

An Act to authorise certain Companies registered under the Indian Companies Act, 1882, to keep branch registers of their members in the United Kingdom.

WHEREAS it is expedient to authorize certain Companies registered under the Indian Companies Act, 1882, to keep branch registers of their members in the United Kingdom; It is hereby enacted as follows :— [VI of 1882.]

Short title, extent and commencement.

1. (*1*) This Act may be called the Indian Companies (Branch Registers) Act, 1900;

(*2*) It extends to the whole of British India; and

(*3*) It shall come into force at once.

Definitions.

2. In this Act, unless there is anything repugnant in the subject or context,—

(*a*) the expression "Company" means a Company registered under the Indian Companies Act, 1882, having its capital divided into shares; and [VI of 1882.]

(*b*) the expression "shares" includes stock.

Power to keep branch registers in the United Kingdom.

3. (*1*) Any Company may, if authorized so to do by its regulations as originally framed or as altered by special resolution, cause to be kept in the United Kingdom a branch register or registers of members.

(*2*) The Company shall give to the Registrar of Joint-Stock Companies notice of the situation of the office where any such branch register (hereinafter called a "British register") is kept, and any change therein, and of the discontinuance of any such office in the event of the same being discontinued, and the Registrar shall record such notice.

(*3*) A British register shall, as regards the particulars entered therein, be deemed to be a part of the Company's register of members kept under the Indian Companies Act, 1882, and shall be *primâ facie* evidence of all particulars entered therein. Every such branch register shall be kept in the manner provided by section 47 of the said Act. [VI of 1882.]

(*4*) The Company shall transmit to its registered office in India a copy of every entry in its British register or registers as soon as may be after such entry is made, and shall cause to be kept at such office, duly entered up from time to time, a duplicate or duplicates of its British register or registers. The provisions of section 55 and section 60 of the Indian Companies Act, 1882, shall apply to every such duplicate, and every such duplicate shall, for the purposes of the said Act, be deemed to be part of the register of members of the Company. [VI of 1882.]

(5) Subject to the provisions of this Act with respect to the duplicate register, the shares registered in a British register shall be distinguished from the shares registered in the Indian register, and no transaction with respect to any shares registered in a British register shall, during the continuance of the registration of such shares in such British register, be registered in any other register.

(6) The Company may discontinue any British register, and thereupon all entries in that register shall be transferred to some other British register kept by the Company in the United Kingdom or to the register of members kept at the registered office of the Company in India.

Power to make rules and prescribe forms.

4. The Governor General in Council may, by notification in the Gazette of India, make rules and prescribe forms for the purpose of carrying into effect the provisions of this Act.

Construction with Act VI, 1882.

5. This Act shall, so far as is consistent with the tenor thereof, be construed as one with the Indian Companies Act, 1882. VI of 1882.

J. M. MACPHERSON,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Act of the Governor General of India in Council received the assent of the Governor General on the 16th February, 1900, and is hereby promulgated for general information:—

ACT NO. V OF 1900.

An Act further to amend the Whipping Act, 1864.

WHEREAS it is expedient further to amend the Whipping Act, 1864; It is hereby enacted as follows:—

Short title, extent and commencement.

1. (*1*) This Act may be called the Whipping Act, 1900;

(*2*) It extends to the whole of British India, inclusive of British Baluchistan and the Santhal Parganas; and

(*3*) It shall come into force at once.

Addition of new section after section 4, Act VI, 1864.

2. After section 4 of the Whipping Act, 1864, as amended by the Indian Criminal Law Amendment Act, 1895, the following shall be added, namely:—

Additional punishment of whipping for rape in certain cases.

"4A. Whenever any Local Government has, with the previous sanction of the Governor General in Council, by notification in the local official Gazette, declared the provisions of this section to be in force in any local area within its province, any person in that local area, who, being a member of an assembly of two or more persons, the common object of which assembly is to commit rape as defined in section 375 of the Indian Penal Code, abets, commits or attempts to commit such offence, may be punished with whipping in addition to any other punishment to which, for such abetment, offence or attempt, he may be liable under the said Code."

Substitution of new section for section 5, Act VI, 1864.

3. For section 5 of the Whipping Act, 1864, as amended by section 6 of the Indian Criminal Law Amendment Act, 1895, the following shall be substituted, namely:— VI of 1864. III of 1895.

Juvenile offenders when punishable with whipping.

"5. Any juvenile offender who abets, commits or attempts to commit—

(*a*) any offence which is punishable under the Indian Penal Code otherwise than with death, or XLV of 1860.

(*b*) any offence which is punishable under any other law with imprisonment,

may be punished with whipping in lieu of any other punishment to which he may for such offence, abetment or attempt be liable:

Provided that the Governor General in Council may, by notification in the Gazette of India, direct that the punishment of whipping shall not be inflicted in respect of such offences falling under clause (*b*) as he may think fit to specify in this behalf.

Explanation.—In this section the expression 'juvenile offender' means an offender whom the Court, after making such enquiry (if any) as may be deemed necessary, shall find to be under sixteen years of age, the finding of the Court in all cases being final and conclusive."

Repeal.

4. The words "under the provisions of the Indian Penal Code" in the preamble to the Whipping Act, 1864, the words "under the provisions of the said Code" in section 1 of the same Act, and section 6 of the Indian Criminal Law Amendment Act, 1895, are hereby repealed. VI of 1864. III of 1895.

J. M. MACPHERSON,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 7.] CALCUTTA, SATURDAY, FEBRUARY 17, 1900.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, February 3rd, 1900.

The shallow depression, noticed in Gujarat at the close of the previous week, advanced in an easterly direction into the Central Provinces on Sunday the 28th January and had practically filled up by Monday morning. It gave a few light to moderate showers in Bengal, Bihar and Chota Nagpur, the heaviest reported on Monday being at Gaya (1·12 inches) and at Hazaribagh (·89 inch). A general decrease of pressure occurred on Tuesday and emphasized a previously existing deficiency of pressure in Gujarat and the neighbouring districts which by Wednesday morning had developed into a shallow depression over the Eastern States of Central India and the adjacent districts of the North-Western and Central Provinces. The depression had almost filled up by Thursday but on Wednesday and Thursday gave light rain in the eastern districts of the North-Western Provinces and Bihar and a few showers in Central India and the Central Provinces. Bahraich received 0·92 inch, Gaya 0·80 inch and Chakrata ·46 inch.

The barometer fell briskly to rapidly in Kashmir on Wednesday, causing unsettled weather in the North-West Himalayas, and during the 24 hours ending at 8 A.M. on Thursday light to moderate rain and snow fell in Baluchistan and the Upper India hill districts. The largest amounts reported were: Mussooree 1·35 inches and Chakrata 0·46 inch. Fine weather prevailed generally over the whole country on Friday and Saturday.

Daily Summary.—*Sunday, January 28th.*—Pressure had risen with the exception of Berar, the Central Provinces and Central India, where it had been steady or had fallen slightly. The depression in Gujarat on Saturday, the 27th

January, had advanced in an easterly direction into the Central Provinces and Berar. A few light falls of rain and snow had been received in Baluchistan, the Upper India hills, Rajputana and the North-Western Provinces. Mean temperature was normal in Assam, the Punjab and Central India; in defect in North-Western Provinces, Bihar, Sind, Rajputana and Gujarat; and in large excess in Berar, Burma, the Central Provinces and the Deccan.

Monday, January 29th.—Pressure had risen briskly to rapidly in the Punjab and slightly to briskly in the Central Provinces, Chota-Nagpur, Orissa and South-West Bengal. The depression in the Central Provinces had partly filled up. A few showers had been received in Bengal, Bihar, and Chota-Nagpur and Trincomalee reported an inch of rain. Mean temperature was in slight to considerable defect in Bihar, Sind and Gujarat; normal in the North-Western Provinces, Central India and the West Coast and in slight to large excess elsewhere.

Tuesday, January 30th.—The barometer had fallen over the whole Indian region; the fall being brisk in Baluchistan, the Punjab, Sind and Gujarat. Light showers had fallen at Rangoon, Hazaribagh, Ranchi and Trincomalee. Mean temperature was in excess in all provinces except Baluchistan, Sind, Gujarat and the West Coast where it was normal or in slight defect. The excess averaged 10°½ in Berar, 7°½ in the Central Provinces and 5° in Burma and Chota-Nagpur.

Wednesday, January 31st.—Pressure had fallen briskly to rapidly in Kashmir and slightly to briskly in the Punjab, Rajputana, the North-Western Provinces and the east of Central India. A shallow depression had formed over the Eastern States of Central India and the adjacent districts of the North-Western and Central Provinces. Light showers had been received at Pachmari, Benares, Allahabad, Gaya and Sutna, and Trincomalee reported a fall of 1·14 inches: mean temperature was unusually high in all provinces except Sind, Gujarat and the West Coast where it was practically normal. The largest excess occurred in Berar, the North Western and Central Provinces, Chota Nagpur, Bihar and Bengal, where it ranged from 5° to 9°.

Thursday, February 1st.—Pressure had risen slightly to briskly in Baluchistan and North-West and Central India, and had fallen slightly to briskly in Bihar, Chota-Nagpur, Bengal, Assam and Upper and Central Burma. The depression in Bundelkhand and the adjacent districts had almost filled up, light to moderate rain and snow had fallen in Baluchistan and the North-West Himalayas and rain in the eastern districts of the North-Western Provinces and Behar. Mean temperature continued in excess except in Gujarat, Sind and the West Coast where it was normal or in slight defect. The excess was largest ranging from 10° to 12° at Jubbulpore, Seoni, Nagpur and Chanda.

Friday, February 2nd.—Pressure had fallen generally except in Baluchistan and the Indus valley where it had been steady. The fall was slight to brisk in the Konkan, the Punjab and the North-Western Provinces and brisk in Bengal, Assam, Upper Burma, Orissa and the east of the Central Provinces. A few very light showers were reported. Mean temperature was in general excess except in Gujarat and the West and Madras coasts, where it was normal. The excess ranged from 6° to 9°½ in Assam, Bengal, Bihar, Chota Nagpur, the Central Provinces and Berar.

Saturday, February 3rd.—Pressure had risen slightly to briskly in North-West India and had changed by small amounts elsewhere. Mean temperature was in slight defect in Sind and normal in Gujarat and the Madras Coast. The excess in the remaining provinces was largest in Bengal, Chota Nagpur, Orissa, Assam and the Central Provinces where it ranged from 6°½ to 9°. Light showers had fallen as Mymensingh and Mussooree.

Temperature.—On Sunday temperature was normal or below the normal in Berar, the Punjab, the North-Western Provinces, Sind, Rajputana, Gujarat, Central India and the West Coast, but rose during the next 24 hours and during the remainder of the week was in excess of the normal in most provinces. The mean temperature of the week was practically normal in Sind, Gujarat, and the West Coast and in excess in all other provinces. The excess was most marked

in Berar, the Central Provinces, the Deccan, North-East India and Burma. The largest variations from the normal were Berar, (+8°), the Central Provinces (+7°½), Chota-Nagpur (+5°½), Burma and Bengal (+5°), the Deccan (+4°½) and Orissa (+4°) ; night temperature was in large to very large excess in Burma, North East India and Orissa during the latter half of the week, the variation from the normal ranging from 5° to 11°½.

The following table gives mean temperature variation data of the week :—

Province.	Variation from normal of mean temperature of 24 hours preceding 8 A.M. of							Mean variation of week.
	28th.	29th.	30th.	31st.	1st.	2nd.	3rd.

South India	+2·8	+2·2	+3·1	+4·1	+3·8	+2·2	+3·0	+3·0
Mean for whole of India	+1·8	+2·1	+3·2	+4·0	+4·0	+4·3	+3·9	+3·3

The mean temperature for the whole of India was in excess throughout the week, the excess ranging from 1°·8 on Sunday to 4°·3 on Friday. For the whole week the excess averaged 3°·3.

Rain.—The rainfall of the past week has occurred chiefly in Chota-Nagpur, Bihar, the North-Western Provinces, the Punjab Hills and Baluchistan. Showers have also been received in Tenasserim, parts of Assam, Bengal and the Punjab, the Central Provinces, the east of Central India, East Rajputana and South Madras. The rain fall has been equal to, or in excess of the normal quantity, in Central and North Bengal, Chota Nagpur Bihar, Oudh, the North Western Provinces (with the exception of the central and hills divisions) the central division of the Central Provinces and the east division of Central India. The average rainfall of the division exceeded an inch only in South Bihar.

The last three columns of the table at the end show that the rainfall of the period, December 31st to February 3rd was normal or in excess of the normal in Central Bengal, Chota-Nagpur, Bihar, the North Western Provinces, the hills, submontane and north divisions of the Punjab, the Baluchistan hills, Central India (east), the central and east divisions of the Central Provinces, Malabar, South Central Madras and Mysore.

The following gives the largest amounts received at individual stations :—

South Bihar—Gaya		2·23 inches.
Ditto	Aurangabad (Gaya)	2·94 ,,
Ditto	Bhabua (Shahabad)	3·40 ,,
North-Western Provinces—Robertsganj (Mirzapur)		2·13 ,,

W. A. BION,
for *Meteorological Reporter to the Government of India.*

SIMLA, *'h February, 1900.*

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 10th February.*—No rain has fallen. Irrigation supplies continue to diminish and are scanty in parts. Cultivation is confined to limited irrigable areas, but harvesting still affords much employment in parts. Standing crops where not effectively irrigated are deteriorating. Harvesting has been nearly completed; what continues is yielding an indifferent outturn. Pasturage is scanty, but fodder is generally sufficient and the condition of cattle continues to be normal. Prices are generally stationary though slightly dearer in parts of the Circars. Two test works were opened in Cuddapah and attracted 818 men, 1,277 women, and 652 children; total 2,747. The number of weavers relieved in their own craft was 235 men and 217 women.

Bombay.—*For week ending 12th February.*—Very slight rain fell in Karachi, Shikarpur and Hyderabad. The standing spring crops are in good condition in the Konkan and in irrigated lands in Baroda, in three districts of Gujarat and four of the Deccan. Spring crops are still alive in parts of the Karnatak where westerly winds are favourable to them, but they have withered in parts of Nasik, Ahmednagar, Poona and Dharwar and have been damaged by frost in parts of Sind. The fodder supply is scanty in Dharwar and in parts of Sind and the Deccan. Cattle are suffering severely owing to insufficiency of fodder in Rajkot and Baroda, and in four districts of Gujarat and parts of five districts of the Deccan. Prices have fallen in three districts, have risen in four districts, and are stationary elsewhere.

The daily average numbers on relief are as follows:—British districts—On test works, 30,116; on relief works, 713,992; dependants, 227,586; total on works, 971,694. In poor-houses, 14,732; on village relief, 47,410; total on gratuitous relief, 62,142. Native States:—On relief works, 301,066; dependants, 38,549; total on works, 339,615. In poor-houses, 26,020; on village relief, 6,903; total on gratuitous relief, 32,923. Grand total on relief, 1,406,374.

Bengal.—*For week ending 12th February.*—Rain fell in small quantities in diverse districts in Bengal Proper and in Bhagalpur, Monghyr and Balasore during the week. The standing spring crops are generally reported to be doing well, and some of the early crops are being harvested. The pressing of sugarcane is in full swing. Spring rice is doing well, and ploughing for autumn rice is beginning. In Ranchi the mango and *mahua* trees are flowering. The price of common rice fluctuated somewhat unsteadily, the results in neighbouring districts being dissimilar. It increased in 11 districts and decreased in 9, and is stationary in the remainder. Cattle are in good condition, there being sufficient fodder for them in every district.

North-Western Provinces and Oudh.—*For week ending 14th February.*—The weather has been clear except in six districts where a little rain fell during the week. The spring crops are generally in a flourishing condition and are beginning to ripen. Peas, *sarson*, rape-seed, and *arhar* are being harvested, and the preparation of fields for extra crops and for the next autumn sowings continues. Sugarcane is being planted in places. The poppy crops are doing well and are being weeded. Slight damage by insects to standing crops is reported from Partabgarh, by rust in some places in Azamgarh and Jaunpore and by damp in Benares. Supplies and fodder are generally ample. Prices are almost stationary, having slightly risen in five districts only.

There were 2,775 persons on four relief works in the Jhansi district; 443 persons on gratuitous relief and 107 in the Jhansi poor-house. One test work at Kagarol, in the Agra district, was closed on the 11th February. There were eleven persons in the Agra poor-house including three strangers. The poor-house in Muttra contained 196 inmates.

Punjab.—*For week ending 14th February.*—Rain has fallen more or less in all districts except Rohtak, Gurgaon and Delhi. The standing crops are being watered. Ploughing and sowings of extra spring crops and of certain autumn crops have been commenced. The condition and prospects of standing irrigated crops are good to fair in Hissar, Rohtak, Gurgaon, Karnal, Ferozepore, Gujrat and Peshawar; average to below average in Delhi, Jullundur, Mooltan, Rawalpindi and Dera Ismail Khan and improving in Sialkot. The standing crops have been benefited by the recent rain in Bannu and Dera Ismail Khan. Rain is urgently wanted in Gurgaon, Delhi, Gujrat and Shahpur. Crops irrigated by brackish well water have suffered in Rohtak and Gurgaon, and they are being damaged by caterpillars in parts of Ferozepore; they have also been damaged by cold day winds in parts of Lahore. Cattle are reported to be in good condition in Peshawar; fair in Karnal and poor elsewhere. They are dying of starvation in Gujrat, Shahpur, Jhelum and Bannu. Fodder is said to be generally scarce, and this scarcity is keenly felt in some districts. Cattle are fed on leaves and branches of trees. Prices, especially of wheat the staple food grain, are rising in Gujrat, Shahpur and Peshawar; they are falling in Rohtak, Gurgaon, Karnal, Jullundur and Dera Ismail Khan, and are unchanged elsewhere. The prices of other food grains are generally unsettled. Wheat is selling from $9\frac{3}{4}$ to $12\frac{1}{2}$, gram $11\frac{1}{4}$ to $16\frac{1}{16}$, barley $11\frac{1}{4}$ to 13, great millet $10\frac{3}{4}$ to 14, bulrush millet $9\frac{3}{4}$ to $12\frac{1}{2}$, maize 11 to $13\frac{9}{16}$ and rice from 9 to 10 seers per rupee.

The average number on relief was as follows. In British districts:—relief workers, 103,641; dependants, 33,362; test workers, 27,169. In poor-houses, 4,006; otherwise relieved, 19,501. Total on relief, 187,679. In Native States:—relief workers, 1,465; gratuitous relief, 1,882; total, 3,347. Grand total on relief, 191,026. No report about relief workers has been received from Delhi and from one work in Karnal.

Burma.—*For week ending 10th February.*—In Lower Burma the reaping of paddy is practically completed. Threshing and winnowing are finished in three districts and nearly finished in five districts. In Upper Burma the reaping of paddy is completed in Minbu, Pakokku and Magwe, and almost completed in Mandalay and Meiktila. The reaping of *juar* continues in parts and the transplanting of dry weather paddy. The standing crops are good, except in the Salin subdivision of the Minbu district, where remissions of revenue appear to be necessary owing to the wheat crop being attacked by rust, and to the irrigated paddy crops suffering from defective water supply. In Mandalay insects have done damage to the crops, and in the Shwebo township the crops on the islands are not good. The price of paddy has fallen slightly in three and risen slightly in one district.

Central Provinces.—*For week ending 13th February.*—The nights are clear and the mornings cool, but the days are warm. *Tur* (Cajanus indicus) is being cut in Hoshangabad. The pressing of sugarcane continues in Betul, and the harvesting of spring crops is in progress. The outturn is estimated at 45 to 90 in Mandla; in the other districts of the Jubbulpore Division and in Narsingpur the yields are fair, but they are very poor elsewhere. The preparation of land for autumn sowings is in progress in Mandla and Nagpur. Water and fodder are generally scarce. Prices have slightly fallen in Seoni, Damoh and Narsinghpur; they are steady in the Chattishgarh Division and in Saugor, Jubbulpore, Mandla, Hoshangabad, Nimar, Betul and Nagpur. There are local fluctuations of prices elsewhere. The cheapest prices are—wheat, 12; gram, 15; rice, $11\frac{7}{8}$; juar, $12\frac{1}{2}$ seers per rupee. The dearest prices are—wheat, $8\frac{1}{2}$; gram, $9\frac{1}{2}$; rice, 8; juar, 9 seers per rupee. Harvesting operations are drawing labourers off relief works, especially in the Jubbulpore division, and over the whole province there is a net decrease of 31,000.

There are 137 Public Works Department works open. The number on relief at the end of the week were as follows:—Relief workers, Public Works Department—adults, 564,424; children, 86,605; village works, 271,101; grass cutting works, 36,247; weaver relief, 23,226; total, 981,603. Dependants—adults, 4,343; children, 106,251. Gratuitous relief:—poor-houses—adults, 235; children, 108; kitchens,—adults, 17,917; children, 171,608; otherwise relieved—adults, 98,194; children, 28,172; total on gratuitous relief, 316,234. Total on all forms of relief, 1,408,431; Feudatory States:—relief workers, 7,179; gratuitous relief, 5,542; total, 12,721; but information is only available from five States.

Assam.—*For week ending 13th February.*—Slight rain has fallen in most of the plains districts. Land is being prepared for early rice in parts of the Assam Valley and for low land late rice in Sylhet. The pruning of tea, the pressing of sugarcane and the gathering of mustard and pulses are in progress. The prospects of mustard are generally good. The prospects of sugarcane are good in Sylhet and Lakhimpur; elsewhere they are indifferent. Fodder is scarce in the Naga and Khasia and Jaintia Hills and in parts of Sylhet. Prices are :—Common rice, Silchar, 16 to 17; Sylhet and Dhubri, 17; Gauhati, 19; Tezpur, 15; Nowgong, 20; Sibsagar, 13; Dibrugarh, 12 seers per rupee.

Mysore and Coorg.—*For week ending 13th February.*—MYSORE: The standing crops are withering in parts for want of rain. Prices have slightly risen in Bangalore and Shimoga and have fallen in Hassan and Chitaldroog. Ragi (*Eleusine coracana*) has been harvested in Bangalore, Tumkur and Kadur. Water and fodder are reported scarce in Tumkur and Kadur.

COORG: The harvesting of rice is almost finished. Prices of food grains are rising. Water and fodder for cattle are sufficient.

Berar and Hyderabad.—*For week ending 10th February.*—BERAR: The days are warm and nights cool. The winter crops sown on well lands are in fair condition. The wheat crop sown on unirrigated land in the Kelapur taluq is doing fairly well. The preparation of land for the ensuing crop continues in some places. Fodder is sufficient only in the Basim taluq. Water is insufficient. Prices:—Akola, 9¾; Amraoti, 10½; Basim, 9¼; Ellichpur, 9; Wun, 11 seers per rupee. Relief workers, 137,759; dependants, 17,235; occupants of poor-houses, 2,583; in receipt of village doles, 2,705; total, 160,282.

HYDERABAD: *For week ending 10th February.*—There was no rain during the week. The total rainfall from the 1st January is 13 cents. The failure of autumn and spring crops has told much upon agricultural prospects. The distress is deepening in the Aurangabad division where the spring crop is not likely to give more than a two-anna yield. Winter rice cultivation, is confined to wells which have yet some water left in them. Cattle are faring very badly for want of pasture and fodder. The water supply is insufficient throughout the Nizam's Dominions. Prices:—wheat 5½, coarse rice 6⅓, and juar 9¾ seers per current sicca rupee. Total number of persons on relief works including dependants are 89,121 and gratuitously relieved 7,011.

Central India.—*For week ending 14th February.*—No rain fell during the week. Agricultural operations are in progress everywhere. There has been no change in the condition of the standing crops, agricultural stock and pasturage since last report. Prices are steady in Gwalior and Indore; high in Bhopal; above normal in Bundelkhand; below normal in Baghelkhand and rising in Malwa. The prices of staple food grains are 12 seers in Gwalior; 9 to 12 in Bhopal; 11 to 14½ in Bundelkhand; 11 to 14 in Baghelkhand; 9½ to 10¼ in Malwa; 8 to 9 in Bhopawar; and 7 to 9 in Indore.

Number on relief works:—Gwalior, 2,163; Bhopal, 17,231; Bundelkhand, 2,220; Baghelkhand, 6,164; Malwa, 9,238; Bhopawar, 51,493; Indore, 6,126. On test works:—Gwalior, 2,852. On gratuitous relief:—Gwalior, 144; Bhopal, 1,072; Bundelkhand, 335; Baghelkhand, 305; Malwa, 1,974; Bhopawar, 2,947; Indore, 4,853.

Baroda.—*For week ending 3rd February.*—There has been no change in agricultural prospects except that the wheat crop has been slightly spoilt in the Amreli district. The condition of agricultural stock is not satisfactory for want of fodder and water in many places. The prices of food grains are as follows:—Bajri, 19; juar, 22; wheat, 16; rice, superior, 12; inferior, 19 pounds of 40 tolas per British rupee. The average number of persons employed on relief works in Baroda territory was 45,739 and the number on gratuitous relief 13,890.

Rajputana.—*For week ending 7th February.*—No rain fell during the week except a few showers at Gwar and Jaipur. The condition of the standing crops and cattle remains unchanged. Pasture is very scarce. Prices are

rising in seven States Prices :—Marwar, $8\frac{3}{4}$; Sirohi, 8; Gwar, $8\frac{1}{16}$; Jhalawar, $9\frac{1}{16}$; Kotah, $7\frac{15}{16}$; Tonk, $9\frac{1}{4}$; Bundi, 8; Shahpura, $9\frac{1}{2}$; Ajmer, $9\frac{3}{4}$; Beawar, $10\frac{3}{4}$; Jaipur, $13\frac{7}{16}$; Kishangarh, $10\frac{1}{4}$; Bharatpur, $12\frac{5}{16}$; Alwar, $11\frac{1}{16}$. The number employed on relief works was as follows :—Sirohi, 3,289; Marwar, 85,093; Mewar, 76,231; Kotah, 10,323; Jhalawar, 1,980; Tonk, 4,172; Bundi, 6,049; Shahpura, 2,432; Ajmer, 32,436; Merwara, 64,073; Jaipur, 33,883; Kishangarh, 5,273; Bharatpur, 11,481; Alwar, 5,688; Bikaner, 26,992; Jaisalmer, 1,397. On gratuitous relief :—Sirohi, 335; Marwar, 21,953; Mewar, 13,950; Kotah, 1,724; Jhalawar, 1,616; Tonk, 1,752; Bundi, 274; Shahpura, 888; Ajmer, 4,307; Merwara, 15,078; Jaipur, 21,072; Kishangarh, 2,958; Bharatpur, 768; Alwar, 1,286; Bikaner, 7,649; Jaisalmer, 139. Besides these, 738 persons in Bharatpur, 221 in Ajmer and 8,243 in Marwar are returned as relieved by private charity. Total on relief works, 370,792: and on gratuitous and charitable relief, 104,951. Bundi reports 28 deaths from starvation and Shahpura, 14.

Kashmir.—*For week ending 13th February.*—A good deal of snow has fallen twice since the last report. The weather was frosty, but has been clear since the 12th. Prices continue below normal. The price of rice continues at 27 seers the rupee.

JAMMU.—*For week ending 14th February.*—Good rain has fallen. Prices are rising slightly. Wheat is selling from $9\frac{1}{4}$ to 16; maize $11\frac{1}{2}$ to 20 seers the rupee. The recent rain has been beneficial to the standing crops. Green grass has srpung up in many places. Dry fodder is scanty.

Nepal.—*For week ending 10th February.*—No rain fell during the week. The weather is foggy and cold. The price of rice is 9 seers per rupee.

The number of persons in receipt of relief during the preceding and present weeks in each Province is shown in the following table :—

Name of Province.	Preceding week.			Present week.			Increase or decrease.

T. W. HOLDERNESS,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from returns obtained from Local Governments and Political Officers, and give the District details of the Provincial totals published weekly in the Crop and Weather Summary of the *Gazette of India.*

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons gratuitously relieved in poor-houses or at their homes.

CALCUTTA, *the 15th February, 1900.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

ARRANGEMENTS BETWEEN HER MAJESTY'S GOVERNMENT, THE IMPERIAL INSTITUTE AND THE LONDON UNIVERSITY FOR TRANSFERRING A PORTION OF THE BUILDINGS OF THE IMPERIAL INSTITUTE TO THE LONDON UNIVERSITY.

Circular No. 6-1—2.

Extract from the Proceedings of the Government of India in the Department of Revenue and Agriculture (Practical Arts and Museums), dated Calcutta, the 2nd February 1900.

RESOLUTION.

Read the following :—

Memorandum, dated October 1899 by the Honorary Director and Secretary, Imperial Institute, London, and enclosures, regarding the recent arrangements between Her Majesty's Government, the Imperial Institute, and the London University for transferring a portion of the buildings of the Imperial Institute to the London University, and for assigning the remaining portion to the general work of the Institute in such a manner that its practical utility may not be prejudicially affected.

MEMORANDUM.

Negotiations have recently been completed between Her Majesty's Government and the Governing Body of the Imperial Institute, having for their object the devotion, to the housing of the London University, of portions of its Main Building which are not required by it for carrying on its operations connected with the practical representation by collections of the resources of the Colonies and India, the advancement of the commercial interests of the various portions of the Empire, and the accommodation of Fellows of the Institute and of others desirous of obtaining information available at the Institute in connection with all Countries composing the British Empire.

The publicity given to the proposals which led to these negotiations resulted in the promulgation by the Public Press, at home and in the Colonies of many statements of a more or less erroneous and misleading character, based in part upon the assumption that the contemplated relinquishment by the Institute of portions of the building, erected in commemoration of the 50th year of the reign of Her Majesty, must arrest, or at any rate prejudicially affect, the operations and future of the Institute.

The Executive Council have therefore directed that the following statement be communicated to Colonial Authorities and to others concerned or interested in the work of the Institute.

The design of the Main Building of the Institute, accepted in 1887, provided an amount of accommodation very considerably in excess of the actual requirements of the Institute, allowing even for important future expansion of its work. The Institute-Authorities, in adopting this design, contemplated the possibility that house-room might have to be provided for certain then existing Societies, or Institutions, whose objects and work were more or less akin to those of the Institute. The space available for such purposes in the Main Building constituted about two-thirds of the East Wing. In meeting the proposal to provide accommodation for the University it has been found practicable, by a concentration of the arrangements for carrying on the administrative portions of the Institute, to surrender the whole of the East Wing for that purpose. In addition thereto, the Halls attached to the centre of the building have been placed at the disposal of the University, with the stipulation that the Institute should have the use of them when required, by arrangement with the University Authorities. Other apartments hitherto devoted to the accommodation of Fellows, and situated in the Central Block, have, together with the Main Entrance, also been made over to the University, the Government having undertaken the erection of corresponding apartments for the use of Fellows as an addition to the West Wing, a special Main Entrance being also provided to this—the Institute portion of the Main Building.

The East Wing of the Main Building included two Conference Rooms, the one for India and the other for the South African Colonies. The latter will be furnished with corresponding accommodation in the West Wing, while India has had made over to it the large addition to the East Wing, the cost of

the erection of which, some years ago, was covered by special contributions received from India. The Government of India has, however, arranged that the large Conference Hall and the Entrance thereto, which form part of this Indian Section of the Buildings, shall be used by the Institute for its Lectures, Conferences, or for special functions.

The Galleries in which the Colonial and Indian Collections are housed are in no way interfered with by the arrangement made with the Government in the interests of the London University. Their sub-division among the Colonies, which was carried out as soon as the buildings were erected, remains intact.

The North Gallery remains as heretofore available for special exhibitions illustrative of the progress of particular industries, and for other objects of interest and importance included in the sphere of action of the Institute.

The accommodation provided for Fellows (Reading, Writing, and News Rooms, Retiring Rooms, etc.) will now be in apartments in the West Wing, corresponding to those which the Fellows have occupied in the East Wing. Commodious Dining and Smoking Rooms, with accessories, will, as already stated, be built, and will immediately adjoin the other apartments devoted to Fellows.

The Library will be removed to the West Wing, and will, in future, be divided into a General Library and an Official Library, which will be in distinct contiguous rooms.

The weekly special Lectures, by well-recognised Authorities, on subjects relating to the various countries composing the Empire, and on matters of special Imperial interest, will be delivered during the Winter Season as heretofore, and will be open to the General Public as well as to Fellows and their Friends. But in view of the more or less heavy losses which have been sustained by the Institute in providing open-air musical entertainments during the Summer (to which Fellows had free access), the Council resolved, early this year, to discontinue the maintenance of the enclosed gardens, and the provision therein of the Concerts referred to. This action of the Council was taken before the proposal to house the University of London in the Institute Buildings was made the subject of negotiation with Her Majesty's Government.

Upon the completion of those negotiations the Institute Buildings were transferred to the Government, from whom, as has been shown, the Institute authorities have secured the retention of the Galleries, and of the necessary accommodation in the Main Building for the proper conduct, and further extension, of the work of the Institute. In addition, the Institute has been relieved of considerable burdens of debt, of very heavy taxation, and of several important incidental liabilities and expenses. The Governing Body will consequently find itself, in the future, in a position to promote, to a greater extent than heretofore, the pursuit and elaboration of the work of the Institute in the interests of the various Countries composing the Empire.

It follows, therefore, that so far from the prospects of usefulness of the Institute having been interfered with or prejudicially affected, they have been very materially improved by the conclusion of the arrangements which enable the Government to house the University of London in portions of the Institute Buildings.

There are more especially two Departments of the Institute whose operations have been steadily developed in the last few years, the practical value of which, to the Colonies, to India, and to the United Kingdom, has already been decisively and amply demonstrated, and the more extensive utilisation of which by the Colonies rests entirely with their Governing Authorities and public Institutions. These are *the Commercial Information Department*, and *the Scientific and Technical Department*, with its Laboratories, its staff of trained Chemists, its Scientific, Technical and Commercial Referees, etc.

Accompanying this Memorandum are two Papers which give illustration of the useful, and often important, work accomplished in these two Departments in connection with the development of our knowledge of the nature and commercial value of the natural products of the Colonies and India, as

well as with every variety of commercial subjects, and with other matters of direct interest and utility to the various countries composing the Empire.

To meet the requirements of merchants and others whose business operations are conducted entirely or in part, in the City of London, a branch of the Commercial Information Department of the Institute has been established in a very convenient quarter of the City. This Branch is in telephonic communication with the head office at South Kensington and includes a very completely equipped Commercial News Room for the use of Fellows and of Subscribers to the City Intelligence Office.

The arrangements in course of organisation by Her Majesty's Board of Trade for the establishment of a Government Commercial Intelligence Office are intended to provide for co-operation with the Imperial Institute, which is to be represented by two members upon a mixed Committee to be appointed for directing the work of this new Government Department. The Institute will take part in carrying out the arrangements for the reception, from the Colonies and Foreign Countries, of samples of materials and of manufactured goods representing supplies made from Countries which compete with British manufactures and Merchants;—their exhibition at commercial centres of the United Kingdom ;—their circulation and eventual storage and exhibition at the Institute, as reference-collections for purposes of comparison, etc.

It is hoped that this brief statement will serve to demonstrate that the operations of the Imperial Institute will continue, and increasingly, to promote the interests, and to assist in developing the resources and commerce, of the various countries composing the British Empire.

Some Examples of Information of a Commercial Character supplied by the Intelligence Department.

From the Chief Office, South Kensington, S. W., and the City Branch, 112, Cannon Street.

Names of Enquirers.	Subjects of Enquiry.
Agent-General for Queensland, London	Report on, and commercial valuation of, hibiscus fibres produced in Queensland.
Ditto ditto . .	To bring to the notice of London and Suburban Vestries Queensland hardwood blocks for street paving.
Ditto ditto . .	Commercial value of rutile (titanium dioxide).
Reporter on Economic Products to the Government of India.	Statement or the quality and value of Indian sisal fibre.
Ditto ditto . .	Report on commercial value of samples of gums.
Creator of Canadian Section . .	Valuation of Canadian graphite.
W. Fosbery, 20, Glazbury Road, West Kensington.	Valuation of India-rubber from the Niger Coast Protectorate.
Geo. Matthey, F.R.S., Hatton Garden.	Umbogazembe fibre, from Natal, opinion desired.
Ditto Ditto .	Value of a specimen of kieselguhr from South Africa.
India Office	Conditions necessary for the safe carriage in India of carbonic acid gas in cylinders.
Ditto	Tests for viscous petroleum.
Hall & Ladyman, 25, St. George's House, Eastcheap.	Information on steatite requested.
Agent-General for New South Wales .	Commercial prospects of Xanthorrhea gum.
Thirkell & Co., 155, Fenchurch Street .	Specimens of fibres, obtained from various Colonies, suitable for hat-making and matting, for introduction into the British markets.
James Bros., London	Samples of jarrah and karri woods supplied, with particulars as to durability, cost, etc.
H. C. Wilson, London . . .	Report respecting sources of supply, in United Kingdom, of hydrocarbons suitable for liquid fuel.
Reichardt Bros., Hull	Prospects of trading in wools in Thibet, and samples of Thibetan wools supplied.

Names of Enquirers.	Subjects of Enquiry.
A. Philips, Birmingham . . .	Licenses required by commercial travellers in South Africa.
W. J. Bush & Co., London . . .	Names of firms in Jamaica who would collect leaves of Hedyosmumnutans.
Sperling & Williams, London . .	Names of Colonial firms exporting ox tongues.
A. Maidment, South Africa . . .	Where nitrate of potassium is produced, how worked, price in London, etc., and some information as to mica and asbestos.
M. Lamm, London	Whether patent fuel made in Belgium requires specially marking for entry into Mauritius.
Metal Manufacturing Co., Delhi . .	Manufactures of sheet metal exported to India. Makers of special tools for manufacturing sheet metal hollow wares. If silver sheets are exported to India from England or the Continent.
W. V. V. Lidgerwood, London . .	Makers of plant for producing artificial ice for skating rinks.
Cundall & Sons, Shipley, Yorkshire .	Various Customs in Foreign business transaction.
Peter de Abrew, Colombo . . .	Asking for name of an agent or broker who would act as London representative.
"Oil and Colourman's Journal," London	Samples of, and names of, dealers in tung oil.
D. Bodden & Co., Glasgow . . .	Canadian manufacturers of wood-wool.
S. Holmes, Hull	Prices realised for vanilla beans in London.
R. G. Norman, Dublin . . .	Market for diatomacious clay (kieselguhr) in the United Kingdom.
Allan & Co., London	Canadian maple sugar and firms supplying it.
J. Geddes, Chicago	Development and future prospects of the hog trade in Australia.
"Oils, Colours & Drysalteries," London .	Information on, and samples of, tung oil.
W. A. Grosuk, London . . .	Duties on spirits and wines in Cape Colony and average rents in bonded warehouses.
The Institute of British Carriage Manufacturers.	Asking for the names of the principal timbers in favour in our various Colonies for carriage-building, with prices, and as to the possibility of the exportation of supplies to this country.
Ditto ditto . .	As to the possibility of finding a Colonial timber suitable as a substitute for lancewood for carriage shafts.
Ditto ditto . .	Substitutes for English ash, for use in carriage-building, from the Colonies.
C. H. Pigott & Co., London . . .	As to price and sale of mica in London.
T. B. Harbottle, London . . .	Customs tariffs of the Colonies and India.
W. Barlow, Chorlton-cum Hardy . .	Commercial prospects in the Soudan.
G. Crosfield & Co., Liverpool . .	List of principal Colonial importers likely to introduce coloured cube sugar.
C. H. Whiteman, Nova Scotia . .	Particulars of process for converting fish offal into guano.
Daniel de Pass, London . . .	Particulars as to brown-paper mills in the United Kingdom.
Jamaica Fibre Co., Ld., Kingston .	Value of samples of ramie fibre grown in Jamaica.
Thirkell & Co., London . . .	Where to obtain material of the nature of silk or tussore waste suitable for felting.
Lever Brothers, Ld., Birkenhead . .	Details of crop, shipments, costs, exports, etc., of copra in Ceylon, India, New Guinea, Philippine Islands, Fiji and South Sea Islands; value of the oil-cake, therefrom.
Kamm & Schrempt, Liverpool . .	Information regarding shipments of castor seed, linseed, ground-nuts and butter beans from Natal and various West Indian Colonies; also of Aniseed and Linseed from Cyprus.
J. T. Boyde, Isle of Man . . .	Prospects of obtaining markets for large deposits of fuller's earth.
W. A. Stephens, London . . .	Discharging capabilities of Fremantle Harbour.
W. Berridge, Southend . . .	Yacht-building in Australia.
Union Steamship Co., Ld., London .	Causes, etc., of spontaneous combustion in coal barges.

Names of Enquirers.	Subjects of Enquiry.
Plymouth Chemical Works, Plymouth	Manufacture of, and trade in, chemical manures in Australasia.
E. M. Macnaghton, Windsor	London importers of jams, crystallised fruits, etc.
R. J. Ferguson & Co., Brighouse	Singapore firms exporting rice, etc., and importing woollens and cottons.
H. T. Buckland, Birmingham	Cost of building and general plan followed in constructing public library in Port Elizabeth.
W. Crawford, Belfast	Linen goods suitable for the Indian market.
E. Enderlein, Manchester	Importers of Manchester goods in various foreign countries.
Scrempft & Co., Liverpool	Exporters of seed in Bombay and Alexandria.
J. H. Row, Poole	Market for bone and fish manure in India.
Barrow Iron & Steel Co., Barrow	Newfoundland iron mines.
British Chamber of Commerce, Paris	Manufacturers of white felt.
P. A. Cobbold, Ontario	Demand for, and prices of, pencil-cedar.
S J. Waring & Son, London	Colonial woods suitable for panelling.
Miss Mary Louch, Lympston	Processes of salt manufacture and names of manufacturers in the United Kingdom.
F. W. Heilgers, London	Substitutes for diamonds in boring drills.
A. S. Hughes, London	Demand in Colonies for celestine (sulphate of strontia).
Ditto ditto	Colonies importing fire-bricks and blue bricks.
Bethell, Gwyn & Co., London	Growth and preparation of sponges.
C H. Havercross, London	Firms in Cape Colony in varnish and spirit trade.
Lambeth Brass & Iron Co., Ld., London	Colonial importers of hardware.
Moreau Marble Co., London	Vendors of Malta stone.
B. Samaraweera, Ceylon	Obtaining a market for citronella oil.
K. Takayama, London	Manufacturers of certain goods suitable for the Japanese markets.
E. H. Rohl, Hamburg	Australian exporters of dried fruits.
M. Warlow, Haverfordwest	Market for ginger, liquorice, and other roots from Queensland.
A. G. Dawson, Brussels	Introducing aniline dyes into Zanzibar.
Cyprus Government, Cyprus	Conditions and extent of the market for terra umbra, and means for developing trade in the Cyprus product.
Reade Bros. & Co., Ld., Wolverhampton.	Export and samples of Barbados asphaltum.
Hugh Low & Co., Middlesex	Procuring rubber plants and seeds.
H. K. Gordon, Bombay	Commercial value, and uses of yellow ochre, and prospects of establishing Indian export trade.
R. Craig, Garstone	The grafting of sugar canes as practised in Queensland
S. Mabson, Bristol	Bee culture in New Zealand.
H. Moore, Owen Sound, Canada	British importers of evaporated apples
G. E. Pike, London	Countries producing and exporting *Arachis hypogea*.
H. Dawson, Daren	Canadian importation of aniline dyes.
E. J. Ewart, Aberdeen	Jamaica's export fruit trade, freights, packing and size of consignments, most suitable seasons, best markets, prices realized, commission charged, cost of storage, etc., etc.
A. Walker, Calcutta	Market for plantain meal and flour; and machine for working plantain fibre.
J. W. Johnston, London	Cultivation of cinchona; and importation and manufacture of quinine.
C. S. Hawkes, Vienna	Market for Australian pelts.
Groome & Sons, Rushden	Boots and shoes suitable for export to Hong-Kong.
C. Mitchell & Co., London	Colonial trade in motor vehicles.
A. Bosworth, Sheffield	Mineral water manufacturers in India, Ceylon, and South Africa.
British Preserving Co., Braintree	Wholesale firms abroad willing to sell evaporated vegetables and fruits.
Schrempft & Co., Liverpool	Indian exporters of certain seeds and roots.
M. A. Hafeez, Bangalore	Manufacture of catgut.
G. L. Streatfield, London	Suitability of Jarrah for flooring.
Mander-Hannay Lead Co., Wolverhampton.	Sources of supply of Galena.

SOME EXAMPLES OF APPLICATIONS FOR STATISTICAL AND SPECIAL INFORMATION REGARDING BRITISH POSSESSIONS AND FOREIGN COUNTRIES.

Enquiries under this head embrace a most extensive list of subjects, comprising, amongst others Trade Returns, Agricultural and other industries, names of Works of Reference, etc., the following being a few specimen applications :—

Names of Enquirers.	Subject of Enquiry.
C. W. Anderson, Hull	Beet-root sugar industry.
Price's Patent Candle Co.	Export of candles from the United Kingdom.
W. Spencer, Batley	Export of osiers from Africa.
Sir Linton Simmons, London	Comparative prices of Australian and American meat.
Ellis, Munday and Clarke, London	Trade marks in Egypt.
"Admiralty and Horse Guards, Gazette," London.	Production of dried vegetables in the Colonies.
Darley and Butler, London	Aden trade statistics.
J. Ormsby Lawder, London	Six ports in England importing the most timber with amounts.
E. T. Rawson, Epsom	Statistics of the importation of Russian and American petroleum into India.
E. G. Barton, Bengal	Process, cost, and places of manufacture of cement, and export to India from the United Kingdom.
A. H. Cherry, Eccleshall	Sundry trade statistics.
Sir Eyre Massey Shaw, London	Gold production of British Guiana.
E. G. Wills, London	Gold mining in British Columbia.
Mons. Yrarrazaval, London	Prices of jute, jute butts, sacks, etc., and names of brokers.
G. Jones, Southbourne-on-Sea	Indian imports and exports of hides, skins, and leather for five years.
J. Smith, Keighley	Timber industry of the various Colonies.
C. R. Watson, London	Import of paper into Australia.
R. Thorp, Goole	Import and export trade of Belize.
Royal Danish Agricultural Society, Copenhagen.	(1) Importation of butter, bacon, hams, and condensed milk into India, Ceylon, Cape Colony, Natal, Lagos, Mauritius, Jamaica, Barbados, Trinidad and British Guiana. (2) Principal teak wood producing Colony.
C. A. Bordier, London	Cultivation of, and trade in, jute in Bengal.
F. V. Longstaff, Wimbledon	Timber imports into the United Kingdom.
British Chamber of Commerce, Paris	Reports on Commissions on Agriculture in th United Kingdom and foreign countries.
Ditto Ditto	Number of inhabitants, distinguishing males from females, in the United Kingdom.
Ditto Ditto	Whisky trade of the United Kingdom.
Thomas Harris, London	Sugar producers in Fiji and Mauritius.
Edward J. G. Gill, Huntingdonshire	Sugar refineries in India and Australia.
India Office, London	Prices of various kinds of raw and manufactured cottons.
J. Armstrong, London	South American rates of exchange.
"Trade Journals' Review," Manchester	Statistics of Japanese trade.
Hans Frey, Zurich	Australian hardwoods for paving.
J. F. W. Howley, London	Prices of oil-seeds, cattle-foods, etc.
Clayton Beadle, Erith	Import of ebony and miscellaneous details as to that wood.
H. J. Jarman, London	Mineral resources and prospects of development of Siberia.
R. Jenkis & Co., Rotherham	List of Consuls in Northern Europe.
W. T. Hollingworth, New Barnet	Importation of cattle into the United Kingdom.
Civil Service Musical Instrument Supply Association, London.	List of towns in various Colonies.
Haddon & Co., London	List of various local directories of the British Empire.
James Edward & Co., London	Export of rubber from Lagos.
House's Cement and Anticrustator Co., Limited, London.	Sources of supply of Mica.
B. L. Smith, London	Tin-mining in Straits Settlements.
A. C. Campbell, London	Average freight rates to Monte Video during ten years.

Names of Enquirers.	Subjects of Enquiry.
Captain J. Phillips, Southsea	Shipping, trade returns, and population of minor Indian ports.
G. E. Pike, London	Imports into the United Kingdom of dried vegetables; countries producing and exporting ground nuts.
Danish Export Union, London	Import into the United Kingdom of dead meat.
E. de la Penha, London	Russian weights, measures and coinage.
Osborn and Shearman, London	Imports of wall paper into Mexico and Central America.
P. C. Windsor, Worthing	Ostrich farming in South Africa.
J. Hewitt & Co., London	Home Firms dealing in Indian curios and antiquities.
Bryant and Aitkens, London	Tapioca and sago; process of manufacture, and forms in which they are exported.
G. M. Johnson, Fleet	Climate, products, prospects and conditions of trading and mining in Somaliland.
H. B. Geddes, London	Price of banana flour in West Indies, and freights.
Brook & Co., Limited, Lewestoft	Colonial and foreign fishing ports likely to purchase patent steam capstan engines.
G. R. Young, Darlington	Climate, cost of living, education and general conditions of life at Trichinopoli.
Manila Railway Co., London	Gauges of Colonial railways.
Frey & Co., Hamburg	Jamaica pimento crop.
Miss Christie, Malvern	Education, churches, and occupations of Cape population; climate, and cost of living at Kimberley.
L. Jarnefelt, Bjorneborg	Names and prices of periodicals relating to electric and acetylene-lighting.
W. F. Sedgwick, Limited, London	Colonial coats of arms.
A. J. Flux, Belvedere	Works of reference upon the expansion of the British Empire.
J. W. Hawkins, Royal Courts of Justice	Newspapers published in the vicinity of Currajong, New South Wales.
D. L. Anderson, Glasgow	New Zealand Company law.
Vandam & Co., London	Electrically lighted towns in South Africa.

Emigration Enquiries.

A considerable proportion of enquiries relate to the emigration to British Colonies, and embrace very varied written and personal requests for information respecting the best fields for emigration, and particulars of all kinds, *e.g.*, climatic conditions, prospects of employment in professions and trades, rates of wages, cost of living, best routes, outfits, etc. Great pains are taken to promptly furnish full details, and to render assistance in the way of introductions, etc.; the literature of the Emigrant's Information Office is also widely distributed to such applicants. Reports and statements from that office, together with particulars of the Parlimentary Emigration Returns are, moreover, regularly published in the Monthly Journal of the Institute. The Curators for Canada and for South Africa likewise furnish enquirers with information respecting the British Possessions they represent, whilst the British Women's Emigration Association has its home at the Institute, and carries out a large amount of valuable work in selecting suitable females for Colonial employment. The Association secures for such persons proper protection during their voyage, and adequate reception upon arrival. Many instances of the success attending these various efforts are on record, letters expressing gratitude for the assistance rendered having been received from persons in Australasia, Canada, South Africa, and some of the minor Possessions.

4th October 1899.

Illustrations of practical results attained, or in course of attainment, from information supplied by the Commercial and Industrial Intelligence Office and by the Scientific and Technical Department of the Imperial Institute.

Messrs. George Crossfield & Co., of Liverpool, wishing to place a new "rainbow cube" *sugar* on the Australasian and South African markets, were supplied with a list of firms in the different Colonies, likely to be interested, and the firm has sent samples and particulars with a view to orders.

A South African correspondent enquired about the prospects of a trade between the United Kingdom and Natal, in *thyme*, grown in the Colony. Samples were obtained from Natal, and reported on by the Institute's expert Referee; the probable result being that stills will be erected in Natal and a trade in the *essential oil of thyme* established.

Mr. E. B. d'Auvergne desired information as to *tea-planting in Ceylon*, viz.:—average price of suitable land; quantity of tea grown per acre; how long tea-plants take before bearing; labourers' wages; whether trade is exclusively in the hands of Companies; and other details only obtainable on the spot. The Corresponding Agent of the Institute in Colombo provided a full report explaining all the particulars.

The "Oil and Colourman's Journal" wrote for samples of *tung-tree oil*, and information as to the sources of supply. The samples and particulars were supplied. Several other enquiries respecting the same material have been dealt with.

Messrs. Stevenson & Son, Moygashel Mills, Dungannon, Co. of Tyrone, enquired whether samples of *cotton* and *linen* goods, suitable for *the South American Market*, could be inspected, they being anxious to manufacture similar qualities. The desired information was given.

Two firms of exporters, one in Brighouse, Yorkshire, and the other in Belfast, enquired as to the descriptions of *cotton* and *woollen* goods and of *linen* goods respectively, which were suitable for *the Indian markets*. Full information was given of the various kinds of textile manufactures in which trade might be developed.

NEWFOUNDLAND—

Steatite.—A sample of mineral, closely resembling steatite, and useful for most of the purposes for which steatite is used, was received from the late Premier of Newfoundland. The results of its analysis were reported to the Colony and brought to the notice of British traders in French chalk; a large firm in Liverpool, who use this mineral extensively, offered to take a trial shipment, and have been put in communication with the deposits.

Some specimens *of iron ores* (hæmatite, magnetite, and chrome iron ore) received from Newfoundland, were found by analysis to be of a nature and quality likely to prove valuable. Further, average samples are to be sent.

BRITISH GUIANA—

Crowa fibre seems likely to be a useful fibre and of a nature for which there is a demand in this country. Steps are being taken to induce merchants in British Guiana to undertake the export of this fibre.

FIJI—

Fibres for fancy articles.—Samples of fibres from Fiji, suitable for various articles for which a demand exists here, have been obtained at the instance of a London firm, who have taken up the matter with a view to placing these products on the market.

CANADA—

Timbers.—Enquiries have been made of the authorities in the Canadian Provinces and the West Indies, at the instance of the Institute of British Carriage Manufacturers, for timbers which might be useful as *substitute for English ash.* Various samples from Quebec, Ontario, Nova Scotia, etc., were submitted, and have been reported on. Among them were some which have been very favourably received, and details are now being obtained as to possibility of regular quantity being exported to this country.

JAMAICA, TRINIDAD—

Specimens of *woods* from these Colonies have also been obtained in connexion with the foregoing enquiry and have been tested. A larger sample, for practical trial, has been asked for of a wood from Jamaica which seemed promising.

BRITISH CENTRAL AFRICA—

Numerous samples of *metalliferous minerals, sands, coals,* etc., found in British Central Africa have been analysed in the Scientific Department and reports furnished to Her Majesty's Commissioner at Zomba.

NEW SOUTH WALES—

Australian sandarac (resin).—A sample of Australian sandarac was received from New South Wales and, being valued at less than the African sandarac at present on the market, on account of the alleged inferiority in point of solubility, etc., samples were examined in the Scientific Department and it was evident that the resin is not so inferior as the difference in valuation would indicate.

Copra oil-mills.—Messrs. Lever Brothers, Ld., of Birkenhead, enquired for details of the crop and exports of copra in Ceylon, India, New Guinea, Philippine Islands, Fiji and South Sea Islands; whether there were any oil-mills in these countries and of what type; whether there was any sale for the oil-cake, if so, where it was shipped and at what price. Full information was obtained from the Corresponding Agent of the Institute and communicated to the applicants, *with the result that the firm has established oil mills at Sydney,* thus introducing a new field for labour in New South Wales.

Messrs. Arnold & Co., timber merchants, of Woolwich, applied for particulars and samples of certain *timbers* from New South Wales, not hitherto introduced into the British markets. Samples and information were supplied, and they state that some of their customers have been favourably impressed with the samples and they expect business to result.

QUEENSLAND—

Information has been furnished, for the use of the Government, respecting the sources of supply of *arrowroot,* the cultivation of *agave* and the extraction and preparation of the fibre for the market; the commercial value of *various fibres*; the cultivation and extraction of *pine-apple fibre*; the cultivation of *ginger*; the commercial value of *rutile*; machines for *practically testing fibres,* etc.

Mr. R. Callard, having observed certain specimens of Queensland *woods* in the Section of that Colony, made enquiries as to importing some quantity for ornamental purposes. Small samples of the woods (*Casuarinas*) were supplied to him, together with the names of timber dealers in the Colony through whom supplies could be obtained.

WESTERN AUSTRALIA—

Coal.—A full chemical and technical report has been made on the Collie coal of Western Australia, samples of which were sent for the purpose by direction of the Premier.

BARBADOS—

Manjak.—Enquiries having been made for information as to "Manjak," a mineral of the nature of "glance pitch," which has been found to occur in large quantities in Barbados. Samples of the material have been supplied from the Commercial Collections to several enquirers and recommendations have been made to the owners at Barbados as to the preparation of the material for the market.

GRENADA—

Ground-nuts and castor seed—The Curator of the Botanic Gardens, Grenada, has made enquiries as to obtaining a market for the above products in the United Kingdom. It has been reported that there is an opening for new supplies of these products. This enquiry is of interest in connection with the request (see above) of Messrs. Kamm & Schrempft.

INDIA—

India-rubber.—A number of samples of india-rubber from Burma, Assam and Madras have been introduced to the notice of manufacturers, cable-makers and brokers. and their valuation of the samples have been reported to the Indian authorities. Samples of the rubber-like material obtained from certain new plants have been received and are under examination.

Jute. —A number of samples collected at various stages of the plant's growth, and submitted to certain treatment after retting have been investigated chemically and examined by commercial experts, with the view of ascertaining at what period of maturity the plant yields the most constant quality of fibre.

Castor oils.—A numerous series of castor-oils from various parts of India have been investigated as to their comparative properties and reported upon.

Indian dyes.—Professor Hummel and Mr. A. G. Perkin have investigated the dyeing properties and chemical constituents of a number of Indian dye-stuffs, amongst which may be mentioned Myrica Nagi, Morinda, Delphinium Zalil, etc., etc.

Fibres.—The following are some of fibres which, after chemical examination by the methods adopted for comparative valuation, have been brought to the notice of merchants and brokers, who have reported on their market value :—Sunn hemp, Phœnix paludosa, Agave rigida, Sansevieria (bow-string hemp), Pine-apple fibre, Calotropis silk floss, Ban riha fibre, Madar bark-fibre, Sabai fibre, Iacca bast, etc., etc.

Mica.—Various preparations of this mineral have been submitted to manufacturers for their opinions, at the request of the authorities in India.

The value of samples of mica from Jeypore has been determined and recommendations made as to the best methods of mining and preparing the products for the market.

Coals.—A full report on Indian coals, with an extensive series of analyses and practical tests, has been furnished to the Government of India.

Limestone.—In connection with smelting experiments with Madras iron ore and Bengal coal, a number of samples of Madras limestone are being analysed.

Iron ores.—A large number of analyses of iron ores from Madras have been made and published. Steps have since been taken to ascertain whether it would be possible to work these ores in Madras.

Turpentines.—A complete series of the turpentines produced in India, from various districts, is under investigation and has been partly reported upon.

Tanning materials.—Acacia arabica pods and bark, Cassia auriculata bark, Terminalia chebula fruit (myrobalans), Cæsalpinia bark, etc., etc. Many samples of these tanning materials have been analysed, and especially samples of the three first named, collected from trees of different ages, with the fruit or bark at various degrees of ripeness, have been compared, the object being to determine the best conditions for cultivation and the most favourable periods in the age of the plants for collecting the tanning materials for the market. At present the proportion of tannin in these materials as sent into the market, and their consequent value, varies very greatly.

A report on a number of samples of Mangrove barks and extracts as to both their tanning and dyeing value has been communicated to the Indian authorities.

Catech and catechu tannin.—Samples of these preparations have been analysed and a report on them is in preparation.

Edible Oils.—An extensive series of samples has been examined and the results published so as to receive the notice of manufacturers and consumers.

Medicinal plants.—A number of plants have been and are being investigated, both as to the chemical nature of their constituents and their therapeutic value, *e.g.*, *Indian aconites, Indian opium, Podophyllum, Indian henbane (Hyoscyamus muticus), Malabar kino, Castor-oil cake, etc.*

Timber.—A report was made by Professor Unwin on the strength and physical properties of pyinma wood, and reports were obtained from the War Office authorities as to its suitability for making gunstocks.

Food-grains.—A large number of food-grains (including famine foods) have been analysed and reported on, and others are now under investigation.

Sun-flower seed and hibiscus (musk mallow) seed have been dealt with as to their commercial prospects.

Tobacco from India has been analysed, and also reported on from the commercial point of view.

Gums.—A chemical enquiry has been made and supplemented by commercial reports, in reference to the value of some Indian gums occurring abundantly in certain localities, which appear likely to be serviceable as substitutes for gum arabic, or for frankincense.

Corundum.—Samples of this material from India have been brought to the notice of manufacturers.

For details of the above extensive researches see the REPORTS for 1896-97, 1897-98 and 1898-99 on the INDIAN SECTION OF THE IMPERIAL INSTITUTE, presented to the Under-Secretary of State for India, by the Special Sub-Committee for India at the Imperial Institute, composed of Sir Steuart C. Bayley, K.C.S.I., C.I.E. (Chairman), Sir Owen Tudor Burne, G.C.I.E., K.C.S.I., Sir Charles E. Bernard, K.C.S.I., Sir George C. M. Birdwood, K.C.I.E., C.S.I., and Sir Alexander Wilson,—together with temporary Honorary Members.

The following are further examples of work done for the Colonies in the Scientific and Technical Department:—

VICTORIA—

Thirty fibres grown in the Botanical Garden, Melbourne, examined by the chemical methods adopted for the comparative valuation of fibres.

Twenty essential oils, from Dunolly Scent Farm, chemically examined and their value determined, as compared with corresponding oils from known sources of supply. (Some of these will meet with ready demand in the London markets, when their manufacture has been sufficiently developed).

A sample of meat extract was analysed at the request of the Agent General.

QUEENSLAND—

Fibres of *Hibiscus* have been reported on by practical experts.

Seven timbers, for paving-blocks, submitted to Surveyors of Vestries with full particulars. The same timbers submitted to mechanical tests, and also to working tests, by experts.

Coffee.—Various samples, cultivated in the Colony, have been reported on by practical experts.

A full report was made on the quality and value of some *cured hides* and *skins* and samples of *leather*, and particulars as to Australian leather and the trade therein were obtained from experts

Samples of *divi-divi* pods were analysed and brought to the notice of consumers.

Analyses of a number of samples of *wine* produced in Queensland were made and experts' opinions obtained, with a view to recommending improvements and precautions in manufacture.

WESTERN AUSTRALIA—

Sample of water from a bore in Perth analysed.

TASMANIA—

Three timbers—Submitted to mechanical tests for strength, elasticity, etc., and also to practical tests. Results sent to the Colony and published.

NEW ZEALAND—

Limestone, iron-ore and oxide of iron paint. – Reported on.

"*Greenstone*," *jet* and *jasper*.—Samples valued and reported on.

Kouri timber—Submitted to tests as above. Report sent to the Colony and published.

HONG-KONG—

Tung oil—Recommended as a substitute for Baltic linseed oil.

BAHAMAS—

Sisal fibre—Examined.

JAMAICA—

Thirty timbers—Submitted to tests. Reports sent to the Colony and published both there and in Jamaica.

BRITISH GUIANA—

Fourteen timbers—Submitted to tests as above. Report sent to the Colony and published.

MONTSERRAT—

Two timbers—Submitted to tests as above. Report sent to the Colony and published.

ST. VINCENT—

One timber—Submitted to tests as above. Report sent to the Colony and published.

Groo-groo fibre—Investigated and valued as above.

TRINIDAD—

Chione glabra—Examined and reported upon to the Colony.

Seeds of *Omphlea megacarpa* are being examined.

Carapa oil—Examined and reported upon.

Sisal fibre—Examined and reported upon.

NATAL—

Samples of an oil-shale and *talc* analysed and reported on.

Experiments made and advice given as to the utilisation of the wood of the South African wattle for paper-pulp.

A sample of a rubber-yielding plant is under examination, as well as a number of medicinal plants.

Six timbers—Tested. Results sent to the Colony and published.

CAPE COLONY—

Analyses of a series of samples of wines have been made with the view of improving the characters and qualities of Cape wines for the English markets.

Three timbers—Tested. Results sent to the Colony and published.

Minerals—Examined.

CANADA—

Minerals, honey, etc.—Examined and reported upon.

CEYLON—

An extensive series of the *timbers* of Ceylon have been tested by Professor Unwin and working tests made as to their practical value.

Kekuna oil is being tested as to its medicinal value.

ORDER.—Ordered, that the Resolution be published for general information in the Supplement to the *Gazette of India*, and that copies be forwarded to the Local Governments and Administrations noted on the margin* for information and publication in the local *Gazette*, to the Chief Commissioner of Ajmer, to the Foreign Department, to the Reporter on Economic Products to the Government of India, and to the Chambers of Commerce noted on the margin† for information.

PART VI.

Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE INDIAN COUNCILS ACTS, 1861 AND 1892 (24 & 25 VICT., CAP. 67, AND 55 & 56 VICT., CAP. 14).

The Council met at Government House, Calcutta, on Friday, the 16th February, 1900.

PRESENT :

His Excellency Baron Curzon of Kedleston, P.C., G.M.S.I., G.M.I.E., Viceroy and Governor General of India, *presiding*.
His Honour Sir John Woodburn, K.C.S.I., Lieutenant-Governor of Bengal.
The Hon'ble Major-General Sir E. H. H. Collen, K.C.I.E., C.B.
The Hon'ble Sir A. C. Trevor, K.C.S.I.
The Hon'ble Mr. C. E. Dawkins.
The Hon'ble Mr. T. Raleigh.
The Hon'ble Mr. Denzil Ibbetson, C.S.I.
The Hon'ble Mr. P. M. Mehta, C.I.E.
The Hon'ble Nawab Mumtaz-ud-daula Muhammad Faiyaz Ali Khan.
The Hon'ble Mr. J. K. Spence, C.S.I.
The Hon'ble Mr. G. Toynbee.
The Hon'ble Mr. D. M. Smeaton, C.S.I.
The Hon'ble Mr. J. D. Rees, C.I.E.
The Hon'ble Maharaja Rameshwara Singh Bahadur of Darbhanga.
The Hon'ble M. R. Ry. Panappakkam Ananda Charlu, Vidia Vinodha Avargal, Rai Bahadur, C.I.E.
The Hon'ble Kunwar Sir Harnam Singh Ahluwalia, K.C.I.E., of Kapurthala.
The Hon'ble Mr. J. T. Woodroffe.
The Hon'ble Mr. J. Buckingham, C.I.E.
The Hon'ble Mr. H. F. Evans, C.S.I.
The Hon'ble Rai Bahadur B. K. Bose, C.I.E.
The Hon'ble Mr. Allan Arthur.

QUESTIONS AND ANSWERS.

The Hon'ble RAI BAHADUR B. K. BOSE asked :—

"Will the Government be pleased to lay on the table a return giving such information as the Director of Land Records and Agriculture, Central Provinces,

may be able to give, without any reference to the district officers, on the points noted below, regarding districts where the assessment of land-revenue as made under the new settlement is already in force, or has been announced to come into force from the next agricultural year :—

I.—Under the old settlement known as the proprietary settlement—

(*a*) Village assets as per settlement records.
(*b*) Land-revenue assessment.
(*c*) Amount of cesses including the Patwari cess, if any, payable under the terms of the Settlement Engagement.

II.—Village assets as realizable by the malguzars in or about the agricultural year preceding the fixation of rents and other village profits by the Settlement Officer for the purposes of assessment under the new settlement.

III.—Under the new settlement—

(*a*) Village assets as fixed by the Settlement Officer.
(*b*) Land-revenue assessment.
(*c*) Amount of cesses including the Patwari cess."

The Hon'ble MR. DENZIL IBBETSON replied :—"The Chief Commissioner has been requested to supply the information asked for, and it will be laid on the table as soon as received. I wish cordially to acknowledge the consideration which my hon'ble friend Mr. Bose has shown in abstaining from making any demand upon district officers in the Central Provinces at the present juncture."

The Hon'ble RAI BAHADUR ANANDA CHARLU asked :—

"1. Will the Government be pleased to state whether the Reuter's Agency supplies the Government of India and the several Local Governments with copies of the telegrams it supplies to the newspapers in India?

"2. Will the Government be pleased to state whether the said Agency supplies such copies (in case they are so supplied) free of charge or on payment for the same? If the latter is the case, will the Government be pleased to state what is the rate or amount of such payment?

"3. Will the Government be pleased to state whether the said Agency is given, by reason of such messages being supplied, any further concession than is accorded to Press messages generally? If so, will the Government be pleased to state what such further concession is, if any?

"4. Will the Government be pleased to state whether any, and if so, what insuperable difficulty exists to preclude the Government from placing before the public, as official communiqués, the telegraphic messages supplied by the said Agency or the substance thereof?

"5. Will the Government be pleased to state whether, apart from, and prior to the dates of, the papers furnished to the members of the Legislative Council, there was any, and if so, what correspondence suggestive of, and leading to, the introduction of the Telegraphic Press Messages Bill, now pending before the Council?

"6. Will the Government be pleased to place the said correspondence, if any, on the table, or state what objection, if any, exists to preclude their doing so?"

The Hon'ble MR. DENZIL IBBETSON replied :—

"1. The answer to the first question is in the affirmative.

"2. A payment of Rs. 1,200 per mensem is made by Government to the Agency on account of the messages supplied to the Government of India and the several Local Governments.

"3. The Agency's messages to Press subscribers are transmitted inland at deferred press rates, although treated as urgent. This concession was made in 1895 on the general grounds of the great importance of foreign telegraphic news, both to Government and to the public, and in return for an engagement on the part of Reuter that the amount of news provided should not fall below 57,600

words in the year, as compared with the number of 28,800 which had been stipulated in the previous contract. This arrangement has no direct connection with the system under which the Agency supplies messages to the Government of India and Local Governments.

"4. The telegraphic messages supplied by Reuter's Agency to Government are supplied on the condition that the officers receiving them shall not publish them, either by circulating them or posting them up in any place of public resort or in any other way, and the Government of India are therefore precluded from placing them, as official communiqués, before the public. The messages are not, in fact, the property of Government, as the question seems to infer. The Government merely pays a certain annual sum for the early receipt of the messages under specified conditions.

"5 and 6. The introduction of every Bill must necessarily be preceded by correspondence, since, except under very special circumstances, the previous sanction of the Secretary of State is obtained to its introduction. But it is the established practice of the Government of India to treat all correspondence prior to the introduction of a Bill as confidential, and to depart from this rule, in the present instance, would create a precedent for which there does not, in the circumstances of the case, appear to be any sufficient justification. All the correspondence that has taken place since the Bill was introduced has already been communicated to the Council."

WHIPPING BILL.

The Hon'ble MR. IBBETSON moved that the Report of the Select Committee on the Bill further to amend the Whipping Act, 1864, be taken into consideration.

The motion was put and agreed to.

The Hon'ble MR. WOODROFFE said :—"Before moving the amendment which stands in my name I ask permission to omit from that amendment the words 'or attempt to commit' in the fifth line."

His Excellency THE PRESIDENT said :—"The Hon'ble Mr. Woodroffe asks for permission to omit certain words from the amendment which he proposes to move. If Hon'ble Members have no objection to make, I have none to make myself."

The Hon'ble MR. WOODROFFE then moved that after clause 1 of the Bill, as amended by the Select Committee, the following clause be inserted and the subsequent clauses be renumbered :—

"2. After section 4 of the Whipping Act, 1864, as amended by the Indian Criminal Law Amendment Act, 1895, the following shall be added, namely :— VI of 1864. III of 1895.

'4A. Whenever any Local Government has, with the previous sanction of the Governor General in Council, by notification in the local official Gazette, declared the provisions of this section to be in force in any local area within its province, any person in that local area, who, being a member of an assembly of two or more persons, the common object of which assembly is to commit rape as defined in section 375 of the Indian Penal Code, abets, commits or attempts to commit such offence, may be punished with whipping in addition to any other punishment to which, for such abetment, offence or attempt, he may be liable under the said Code.'" XLV of 1860.

He said :—"The punishment of whipping—I do not speak of correction with a birch rod or cane properly administered to youthful delinquents—the most ignominous perhaps now in existence in any civilized state, should, I venture to think, be inflicted only upon offenders, upon whom whipping while acting as a deterrent, one of the objects of punishment, should not subject them to such an amount of degradation as would destroy every chance of reformation, another and more important object of punishment. To satisfy this condition the offender who can with propriety be whipped must have committed offences of great moral turpitude, offences which by their very nature mark out the offence as one devoid of all the nobler qualities of manhood, one whom whipping cannot degrade.

"Of such a character is the offence proposed to be dealt with in the proposed new section when committed under the circumstances therein described. So committed the offence is of a peculiarly brutal and inhuman character, wanting, in many instances, even the poor palliation of overmastering desire, and presenting, in its most loathsome, its most despicable aspect, the tyranny of numbers over a weak and defenceless woman to her utter and irreparable injury. Entertaining these opinions I need hardly say how completely I agreed with the recommendations of the Hon'ble the Chief Justice of Bengal and such of the Hon'ble Judges, his colleagues, as with him concurred in the minute of Mr. Justice Wilkins upon the advisability of extending the provision of this Act to what is known as gang-rape. Among the learned Judges who concurred in his recommendation I note especially Justices Ghose and Banerji, Judges of wide experience and, from their knowledge of the people of this country, competent to assist the Legislature in providing a remedy for this growing and most grievous offence.

"From Mr. Justice Wilkins' minute I read the following extract:—

'There is one offence which I think certainly calls for an extension of the provisions of section 2 of the Act (VI of 1864); I refer to what may be called 'gang rape,' when a number of men join together to violate a woman. The offence is prevalent only in certain districts of Eastern Bengal—notably in Mymensing, and I think that any of the Judges of this Court who has sat on the Criminal Bench during the last three years, will support me in my assertion that it is an offence committed in a peculiarly brutal and inhuman manner. The perpetrators, in the cases which have come before me, have always been Mahomedans of the lower classes; their victim is generally a young married girl; they wait till she is left unprotected by the absence of her husband or her parents; and they then attack her and forcibly carry her off. The motive is not always the same; at times, it is revenge; at times merely the gratification of their own passions. But the consequences to their victim are, of course, terrible and irreparable. The crime is, apparently, not on the decrease, and seems to have sprung into existence of late years. It would very probably be at once suppressed, as 'garrotting' was in England, if one or more of the guilty parties were to be subjected to a well-deserved, if severe, flogging.'

"The minutes of the Hon'ble Judges to which I have referred are not unnaturally confined to the commission of the offence in Bengal where, I am relieved to find it stated, it is more or less restricted to the Eastern districts of that province. A recent trial in Burma has, however, disclosed the fact that this offence is not unknown in other parts of this Empire, and that, with shame be it confessed, offenders of the inhuman and brutal type proposed to be dealt with, may perhaps be found even in the ranks of the British Army.

"The proposed section leaves it open to the Local Governments to extend its provisions, with the previous sanction of the Governor General in Council, to any local area within these provinces. In view of the deliberate opinion of so many of the Judges of the High Court at Calcutta, I venture to express the hope that His Honour the Lieutenant-Governor of Bengal will be among the first to use the powers, which, if the proposed new section is approved of by this Council, will be placed in his hands."

The Hon'ble MR. IBBETSON said:—"My Lord, I support this amendment. The general suggestion, backed by the weighty authority of several Judges of the Calcutta High Court, was one of those which were considered by the Select Committee, and are referred to in paragraph 5 of their report. They did not feel themselves able to act upon it, partly because they regarded it as not falling within the scope of the Bill as referred to them, and, partly because they were of opinion that it was unsafe to accept the suggestion without consulting the Local Govenments. Our experience in the matter of the 'rioting' section which has now been expunged from the present Bill, shows how exceedingly necessary such consultation is, even in so apparently small a matter as that before us; and I should have been unable to accept any proposal to add the offence which is defined in the amendment to the list of offences punishable with whipping throughout India, without allowing to local Governments the opportunity of expressing an opinion upon it. But the addition of the first three lines of the amendment, which the honourable and learned Mover has accepted, entirely meets this objection. I agree that no more brutal or inhuman crime than that described by the Hon'ble Mr. Woodroffe can well be imagined, and I heartily support the motion."

The Hon'ble RAI BAHADUR ANANDA CHARLU said:—"I am no believer in the rod as an instrument of good. Its use is degrading and humiliating, and it destroys all sensitiveness to shame and all sense of self-respect, no less in the juvenile than in the adult. But the classes to whom the amendment relates are beasts in human shape. To them my remarks do not apply. As to them, therefore, I cordially support the Hon'ble Advocate General's amendment as to what I may call gang-rape."

The Hon'ble MR. REES asked:—"Do we speak to the amendment now, and to the principle of the Bill afterwards?"

His Excellency THE PRESIDENT replied:—"Yes, speeches can be directed only to this amendment now, and speeches on the principle of the Bill can be made on the motion that the Bill be passed."

The Hon'ble MR. REES said:—"My Lord, the section proposed by my hon'ble friend Mr. Woodroffe is permissive, and can thus be applied by any Local Government with the previous sanction of your Excellency in Council, to the locality in which this crime is prevalent. For I hope and believe for the credit of India that it is peculiar to Mymensing. Since the amendment is moved, no one is likely to vote against its adoption. Certainly, I would not. But there are others of equal importance. The Select Committee advisedly limited the present Bill to the matters with which it deals, though it obviously recognized the necessity for other amendments. When Mr. Justice Prinsep was a member of this Council, he used to urge the inconvenience of these piecemeal legislative patches, and once he drew up a list of enactments, showing what a very large proportion were mere amendments. I do not know that periodical amendment is less admirable in a Legislature than in an individual, but Sir Henry Prinsep preferred to find a place for a more comprehensive, and, therefore, a more glorious, repentance, in a revising and consolidating statute. I hope such revision and consolidation of the Whipping Act will not be long deferred, and meanwhile vote for this amendment, as it deals with one matter, but not, I think, with one of the most pressing matters, which call for action. I understood the hon'ble and learned Advocate General to express the same opinion I now express in his speech, when we last met, upon the Transfer of Property Act, and I believe he has only departed from the sound position he then took up, owing to his indignation at the horrible character of the crime of gang-rape."

His Honour THE LIEUTENANT-GOVERNOR said:—"My Lord, I had not had the advantage of seeing the opinion of the High Court, when I was called upon to submit my own opinions on this Bill to the Government of India. But the suggestion to which effect is given in this amendment had been presented to me, and I refrained from proposing this addition to the penalty that is prescribed for rape. The penalty which is prescribed by the Penal Code for rape is the heaviest penalty that is imposed on any offence that is short of actual murder. The penalty for rape is transportation for life. I had no doubt, and I have no doubt, that the Hon'ble High Court and the Sessions Judges who are subordinate to it, will avail themselves of all the discretion that is given them by the law in inflicting exemplary punishments, whenever and wherever the state of crime calls for it. Our difficulty in dealing with this particular class of crime, in Bengal at least, lies not in the inadequacy of the punishment but in the inadequacy of the evidence that is brought to prove the alleged crime. The cases, I am informed, are unfortunately extremely frequent in which the charge of rape is brought simply to cover and conceal detected adultery, and the cases are often of great difficulty and doubt. These were the reasons which led me to hesitate as to whether the addition to the already heavy punishment prescribed for rape was necessary or expedient, but I admit that the Hon'ble Judges of the High Court have had far longer and more minute opportunities of judging of these cases than I have, and in deference to their authority, which no one will admit more readily than I to be of the highest, I offer no objection to the amendment."

The Hon'ble MR. WOODROFFE said:—"Though I confined my observations to this particular amendment, it is not to be understood that I am not

largely in accord with the opinions expressed by the Hon'ble Mr. Rees. It does seem to me that there exists a necessity to consolidate and amend the whole law of whipping. The original Act has almost disappeared from the Statute Book. Even the preamble has been altered and sections have, from time to time, been changed till it is more difficult to find out what the law is than to administer it when found out. In strictness the Whipping Act of 1874 as amended from time to time forms part of the Penal Code, and my hope is that, this amendment, which I have proposed, may hereafter find its proper place, in some amending and consolidating Act, if not in an amendment or consolidation of the Penal Code which, I understand, is before the Council."

His Excellency THE PRESIDENT said:—"In putting the new clause I would remind Hon'ble Members that the words 'or attempt to commit' in the 5th line have already, on the motion of the Hon'ble Mr. Woodroffe, which has been accepted by this Council, been expunged."

The motion was put and agreed to.

The Hon'ble MR. MEHTA moved that, for clause (*b*) of section 5 of the Whipping Act, 1864, as proposed to be substituted by clause 2 of the Bill, as amended by the Select Committee, the following be substituted, namely:—

"Any offence punishable under any other law with imprisonment, which the Governor General in Council may, by notification in the Gazette of India, specify in this behalf";

and that the proviso to the said section be omitted. He said:—"The amendment which I propose is calculated to achieve the very same object as the section now stands. The only difference will be that that object will be attained not in a wholesale and indiscriminate fashion but with care and deliberation. It has been pointed out by the experienced Indian Judges of the High Court of Calcutta that, according to native sentiment, whipping is a far more degrading and hardening punishment than that of imprisonment. I think they have described the native sentiment in this respect correctly. At the same time I am bound to confess that there is a great deal of force in the argument that it was much better not to subject juvenile offenders to the demoralising influences of a jail life. It is therefore most important, taking both these arguments into consideration, that the way in which we proceed in this matter should be as deliberate as possible. The section as it now stands is capable of doing one thing more than is generally supposed. It is said that no Magistrate would inflict whipping unless he was prepared to inflict imprisonment in its stead. But, my Lord, it seems possible that Magistrates will sometimes go beyond that; where they could possibly have inflicted a fine, they might in its place inflict whipping. I would put a concrete instance, suggested by the papers submitted to the Select Committee, as illustrating what I say. There is a very common offence known in this country as commission of nuisances. It is possible no Magistrate would inflict imprisonment if the juvenile offender is convicted on that section, but it is very possible that he would inflict whipping in lieu of fine, under the belief that so far as the juvenile offender himself is concerned, he would not be punished by a fine which his friends would pay. If we remember the state of native society, and the common practice of parents to send children on to the street, the result would be that, not only will the children be punished for the sins of their parents, but the parents themselves would escape scot-free, because they have escaped the fine which they would otherwise have paid. It is not at all improbable that cases of whipping of that character will occur, and it therefore seems to me that we should proceed with care and deliberation in saying what offences only should be brought under clause (*b*). That there are cases which ought to be excluded from the purview of clause (*b*) is apparent from the admission involved in the proviso which has been appended to that clause, which gives power to the Governor General in Council to exclude such offences as he may think not fit to be included in the operation of that clause. It seems to me the safer course will therefore be to ask the Governor General to go carefully through the infinite variety of local and special laws, which, so far as moral turpitude is concerned, many of them are only conventional offences, than that the door should be shut after the mischief is done. As the clause now stands

in the amended Bill, it is only after the mischief is done that the local or special law may be excluded."

The Hon'ble MR. IBBETSON said :—" My Lord, I feel bound to oppose this amendment, because it seems to me to conflict with the general principle upon which the law regarding the whipping of juveniles is based. I think that the Hon'ble Mover has failed to distinguish between the principle upon which we whip an adult and the principle upon which we whip a juvenile. In the case of the adult our object is to inflict upon a hardened or degraded criminal what is probably the only punishment which he really dreads—to impose upon him a penalty more severe than that of imprisonment. We regard the offence committed as an index to the character of the offender, and select certain offences as proper to be punished by whipping The case of the juvenile is widely different. Here our object is to save him from the contamination of prison life—to impose a penalty which is less severe and less injurious to him than that of imprisonment. We are concerned with the age rather than with the character of the offender, and we regard, not the offence which he has committed, but the punishment which is to be inflicted upon him To attain our object, therefore, it is necessary to legalise whipping as a possible alternative to imprisonment in the case of all offences for which imprisonment may be inflicted. The Bill, indeed, in the proviso to the amended section 5, empowers the Governor General in Council to exclude any offences which he may think fit from the operation of the section. But the rule, to which exceptions are thus allowed, is to be that if an offence is properly punishable with imprisionment, it is, in the case of a juvenile, still more properly punishable with whipping. The motion before us would reverse this order, and make what is now the rule, the exception.

" It is not proposed to make whipping compulsory for any offence. The words of the Bill are " may be punished," not " shall be punished." There are, no doubt, numerous individual cases in which a juvenile offender become liable to imprisonment under the Criminal law, but in which it would obviously be improper to whip him. But in such cases it would generally be still more improper to imprison him. We already trust to the discretion of our Magistrates in the matter of imprisonment, and I think we may safely do so in the matter of whipping also. As a fact, the general experience is that they are not too ready, but too unwilling to inflict corporal punishment."

The Hon'ble MR. WOODROFFE said :—" I support the amendment of the Hon'ble Mr. Mehta. I do not think the Hon'ble Mr. Ibbetson's reasons for opposing this amendment touch the matter of the Mover's speech at all. It is distinctly admitted that the whipping which is administered to juvenile offenders is punishment not correction, punishment of a penal character inflicted, no doubt, with less severity upon them than upon adutls. My Lord, clause 2 of the Bill as amended leads us into a wilderness of law, where it is difficult to ascertain, amidst the vast mass of these various legislative enactments, those under which whipping is an appropriate punnishment. It has been pointed out by one of the Hon'ble Judges of the Madras Court that in the vast majority of offences under special and local laws punishable with imprisonment it is not advisable that sentences of whipping should be passed. It is stated, in the papers that have been circulated to Council from Hyderabad, that :—

'There are, no doubt, many offences under special or local laws in which the sentence of whipping may be administered to juvenile offenders. But there are many more in which the sentence of whipping would be improper. If a young boy of 15 who has inherited from his father a gun, for which the father held a license, does not renew the license after the father's death, he becomes guilty under clause (*f*), section 19 of the Arms Act, XI of 1878. The offence is punishable with imprisonment. It would be unjust to punish the young man with whipping. Similarly, if a boy, having cattle in his possession, allows them to trespass into a reserved forest, he is guilty of an offence under section 25 of the Forest Act, VII of 1878, punishable with imprisonment. Instead of making by law all offences punishable with whipping and leaving it to the Executive Government to determine in what cases such punishment may not be awarded, the proper procedure on well recognized principles is, in my opinion, for the Legislature itself to determine in what cases such punishment may be allowed. The proposed addition to section 5, therefore, requires to be differently drawn.'

"The Hon'ble Mover of the amendment does not go to the full length of the writer of this minute, because, as I understand him, he proposes to leave it to the Executive Government to determine, by notification in the first instance, what offences should be punishable with whipping among those other laws. For myself I should have preferred those offences determined by the Legislature. But if this is not to be, let us have at least a notification now specifying the offences under these other laws punishable with whipping rather than several notifications hereafter specifying offences not so punishable. The sentence of whipping is irreparable. Once done, it cannot be undone. The conviction may be reversed, the whipping cannot, and having in view the numberless cases in which—one is mentioned, for instance, in the papers which have been submitted from the Assam Government—juvenile offenders have been improperly whipped, it appears to me sufficient to shew that it is eminently desirable that the offences which are to be punished by whipping should in the first instance be examined into and publicly notified by the Governor General in Council. The case there mentioned is a case, known to the Chief Commissioner, in which the officer who had witnessed the offence, one of a trivial character, himself not only arrested, tried and convicted the offender, but also inflicted the corporal punishment with his own hand. Among the reports of the Calcutta cases I find another instance of the like improper procedure. There in a summary trial, held by a Magistrate, who was himself the principal witness, time to adduce evidence for the defence was refused, and a non-appealable sentence including stripes, which were inflicted, passed. The High Court set the whole conviction aside. Of course, the punishment of whipping could not be undone.

"There would be no difficulty, it seems to me, if action were taken by the Executive in the manner in which it is proposed by the Hon'ble Mover of this amendment. Among these various laws, my Lord, there are the Post Office Act, the Telegraph Act, the Railways Act, the Arms Act, the Forests Act, the Excise Act and the Christian Marriage Act. It has been said by the Hon'ble Mr. Ibbetson, that we do not say he "shall" be whipped, but that he "may" be whipped. Is it desirable that this large option should be left to the magistracy of this country—many of them, no doubt, distinguished by integrity, by learning and by a sense of justice, but amongst whose numbers, unfortunately, there are to be found many who are wanting—I will not say in law, but even in the prime necessity of common sense—and who punish, without rhyme or reason, ignorantly and sometimes even improperly? Is it advisable to permit them to wander without a guide amidst this maze of "other laws", to give them, without a note of comment on all these divers laws, the power of inflicting thereunder a punishment which cannot be undone? It is, I submit, better that the door should be shut before the horse is stolen, and that it is no use to say that we should let these Magistrates exercise their own free and uncontrolled discretion as to whether they shall, or shall not, whip; and that when there comes an outcry against some glaring instance of wrong, the Executive shall then step in and declare that it shall no longer be done. That, my Lord, will not heal the wounds of those who have been punished injudicioulsy or improperly. It is always a question whether whipping is a punishment appropriate to the offence, and there are here a variety of offences for which certainly whipping is not appropriate. But being punishable by imprisonment if the law passes as it stands at present, each and every one of those persons may be whipped, and whipped, without redress. For these reasons I have great pleasure in supporting the Hon'ble Mr. Mehta's amendment."

The Hon'ble MR. BOSE said:—"The law as it now stands does not contemplate the suspension of the sentence of whipping pending an appeal; so that an acquittal in appeal is nugatory so far as the carrying out of the sentence is concerned. The degradation and marks of infamy resulting from the punishment abide, even though the person punished be ultimately found innocent. Such being the case, this mode of punishment should not be extended to any new class of offences, except after fullest consideration. As the clause stands an indefinite class of offences is brought within the Act, without any previous examination of the propriety of such an inclusion. The existence of the proviso involves an admission that there may be certain offences covered by the clause,

which should not be so covered. It is but reasonable that the necessary discrimination between those offences which are proper subjects for inclusion and those which are not, should be made before the law is made to apply to any particular class of offences. Speaking generally, the Governor General in Council will not exercise the power of exemption under the proviso unless moved by the Local Government, which again in its turn will not take any action unless moved by the district officers. These latter would only act, when some case of exceptional hardship would arrest their attention or be brought to their notice. Thus it will be long before effect will be given to the proviso. In the meantime the Act will continue to operate in cases where its application may ultimately be found to be improper. Such cases could easily be mentioned, as for instance, offences provided for by the Cattle Trespass Act and the Acts intended to protect the public revenues. These offences need not necessarily involve any moral turpitude. I beg therefore to support the amendment."

The Hon'ble Mr. EVANS said :—"To appreciate rightly the question raised by the amendment before the Council, it is necessary to bear in mind the clear distinction in the manner in which the Whipping Act in its present form deals with adult offenders from that in which it treats juvenile offenders. Not only is the punishment of whipping inflicted on an adult very different to the whipping of a juvenile offender: but with regard to adult offenders it is recognised that to determine whether whipping is a suitable punishment, it is to the nature and character of the offence that regard must primarily be had, and for this reason certain offences were selected as properly punishable with whipping, and power was given to the Courts to inflict that punishment if they should think it advisable in any instance. In regard to juvenile offenders the case is altogether different. Section 5 of the Act prescribes whipping as an alternative punishment for juvenile offenders, not for certain selected offences, but for all offences under the Penal Code—making no distinction in regard to the offences: because it was held that whipping would be, for many reasons, in many instances, a more suitable punishment than imprisonment for juvenile offenders, whatever was the offence committed. The proviso attached to clause (*b*) of the new section 5 is based on the assumption that *primâ facie* all offences punishable with imprisonment should be made punishable with whipping in lieu of imprisonment, and this assumption seems to me the only one consistent with the principle on which the law as it at present stands is based.

"The Hon'ble Member who has moved the amendment is of opinion that the large number and diversified character of the special and local laws renders it inadvisable to make offences by juvenile offenders under them generally punishable with whipping: and the Hon'ble Member is apparently apprehensive that whipping will be inflicted as a punishment for offences which it would be an obviously inappropriate penalty. But in the case of juvenile offenders, as was felt by the framers of the Whipping Act, it is not so much the character of the offence as the circumstances of the offender, such as his age, previous history, social rank, which determine, in each instance, the question whether whipping should be substituted for imprisonment as less injurious to the offender's moral character. It is not thus by the exclusion of offences under this or that special law that sound judgment in passing sentences of whipping can be secured. For that we must look to the Courts. The majority of the Criminal Courts are presided over by gentlemen who are natives of the country, and as such in the best position to distinguish cases in which whipping would be an unsuitable punishment. In spite of the opinion expressed by the Hon'ble Mr. Woodroffe, I venture to say that the experience of the 35 years during which the Whipping Act has been in force, warrants us in looking with confidence to the same judgment and discrimination on their part in dealing with offences under other laws as they have shown in dealing with offences under the Penal Code.

"For these reasons I am of opinion that it is quite sufficient that power should be issued for the Governor General in Council to exclude from the application of clause (*b*) such offences as experience will show call for such exceptional treatment. I am therefore unable to support the amendment."

The Hon'ble MR. WOODROFFE said :—"May I ask Your Excellency's permission to add one matter by way of explanation of my reference to the Railways Act, which I accidentally omitted from my previous remarks."

His Excellency THE PRESIDENT said :—"I see that under the rules an Hon'ble Member may, with my permission, speak once again after a previous speech by way of explanation. If the Hon'ble Member desires to speak again in this sense, I can permit him to do so."

The Hon'ble MR. WOODROFFE said :—"I referred, my Lord, to the Railways Act, as one of the other laws under which punishment of whipping can be inflicted, and I desire to explain that under that law the punishment of whipping can only be given to a juvenile under the age of 12. If the amendment be not carried, there will, in fact, be an alteration of the Railways Act by this Act by extending the age of juveniles from 12 to 16."

The Hon'ble SIR HARNAM SINGH said :—"My Lord, although I am glad to gather from the Select Committee's report that the most objectionable provision regarding riots is removed from the Bill, still the Bill as it stands is open to objection.

"My opinion is adverse to this form of punishment of juveniles for attempting or abetting to commit an offence under the Penal Code. The punishment of whipping is regarded in this country as being of a very degrading character. A boy under 16 years of age is a juvenile and is hardly conscious of the gravity of the offence he abets or attempts to commit. Considering his immaturity of judgment, the degrading character of the punishment, and the ruinous effect it will have on his future career, I believe that the proposed punishment in such a case is undesirable.

"I have to make the same remarks about making offences by juveniles against laws other than the Penal Code punishable by whipping. Having regard to the fact that such offences do not generally involve the same degree of moral turpitude as those under the Penal Code, it is undesirable to punish them with whipping, which is regarded by the people as a more degrading form of punishment than even imprisonment. Prison contamination is bad enough, but the degrading and hardening effect of the punishment of whipping would be worse, as pointed out by the Indian Judges of the Calcutta High Court. The Chief Commissioner of Assam has known a case in which a Magistrate, who saw children playing with fireworks on the highway, caused them to be locked up for the night, convicted them himself on his own evidence the next day, and then inflicted corporal punishment on them with his own hands. This is the kind of thing which may be expected to occur if the punishment of whipping is extended to such cases, and I agree with the Chief Commissioner in deprecating any extension of whipping powers to petty offences, such as may be committed under laws other than the Penal Code.

"My Lord, I think flogging is not calculated to reform the character of a boy, and I do not see the necessity of going beyond what is already provided for in the Indian Penal Code. In these circumstances and as my hon'ble colleague Mr. Mehta's amendment tends to limit the number of cases in which this punishment can be inflicted, I feel it my duty to accord it my support."

The Hon'ble RAI BAHADUR ANANDA CHARLU said :—"The real issue before us is, Should any case be permitted to occur in which the skin might be ripped open, when it should not be? There can be but one answer to it, and that the negative."

The Hon'ble MR. REES said :—"I agree with the Hon'ble Member who moves the amendment that it is better that the Government should notify, from time to time, to what offences under laws other than the Penal Code, the new section 5 of the Whipping Act should apply, than that the section should embrace all such offences punishable with imprisonment, unless the Governor General in Council otherwise directs, but I oppose the amendment, because I think

it is the function of the Legislature to decide, when passing a law, what specific offences are punishable with different kinds of punishment.

"More than one learned Judge, who has been consulted by Local Governments, has arrived at the same conclusion.

"I should prefer that the offences to which the new section 5 (*b*) is to apply should be specified in the Bill. Either it is, or it is not, desirable that a certain offence should be punishable with whipping. That is a matter which could be decided now, once and for all, and circumstances will not change so as to make whipping a proper punishment in the future for an offence in respect of which it is at present an unsuitable correction.

"Much advantage would result from the law being definitely laid down in this behalf. I was much struck with the same two cases as those selected by the Hon'ble Advocate General. A boy under 16 years of age, in charge of cattle which strayed into a forest reserve, would be liable to be whipped, or a youth of the same age who succeeded to the possession of his father's gun, and did not renew the license. These boys may be heads of families corresponding with yeomen in England and in their little world, they would be degraded, having committed no serious offence. Never since the time of Robin Hood has the breach of forest laws, however necessary such laws may be, been looked on as an offence involving disgrace and loss of character, and as the Magistrate of a district, I should have much regretted the infliction of whipping in such cases as these. An estimable youth, cultivating on the margin of a jungle, and keeping a gun for the purpose of co-operating with the agriculturists' firmest friend, the tiger, in keeping down the head of deer, might, without any bad intention, omit to renew his license.

"Whipping would not be a suitable punishment in such cases, and, indeed, the feeling of the inhabitants of India upon, and their attitude towards, this subject are not, I think, altogether similar to those of Europeans

"I remember that the commotion consequent upon the infliction of very moderate corporal punishment by a schoolmaster, gave a sharp shock to a well known educational institution.

"Again, at any time it may happen that the whipped boy is a married man—at such an early age do striplings in this country take upon themselves the pains and pleasures of manhood. The higher the caste, the earlier the marriage—and the less suitable corporal chastisement for a culprit, whose offence very possibly may not argue great moral turpitude.

"The amendment would prevent the infliction of this punishment in any case to which it had not been made specially applicable, but I think that the offences should be specified in the Bill, as those offences are specified in the Whipping Act, that both the section and the amendment are open to equal objection, and that the latter should be rejected and the Whipping Act revised."

The Hon'ble MR. TOYNBEE said:—"My Lord, I think that there is great force in the arguments which the Hon'ble Mr. Mehta has given for the amendment which he has moved. If the question is raised before a Court as to whether or not the punishment of whipping is applicable to a juvenile offender who has committed an offence under some law other than the Penal Code, it would undoubtedly be safer to solve the question by the production of a *Gazette of India* notification specifying the laws under which whipping *may* be inflicted, than to produce a similar notification specifying laws under which it may *not*. The former, which I may call the *positive* method, seems to me to be safer and simpler than the latter, or *negative*, method, because in the first case the whipping could not be legally inflicted unless the law concerned was found to be specified, whereas in the second case the Court would have, as it were, to prove a negative, and might illegally inflict a sentence of whipping by reason of its not being able to find a prohibitive notification which actually existed. As a prohibitive notification seems to me to run a greater risk of being overlooked than a permissive one does, I support Mr. Mehta's amendment. There seems to be considerable misapprehension, my Lord, as to the alleged degrading nature of a whipping inflicted on a juvenile offender. But it need

in no case be of such a nature; for section 392 of the Code of Criminal Procedure says:—'In the case of a person under 16 years of age it shall be inflicted in such mode, and on such part of the person, and with such instrument, as the Local Government directs'. And section 390 of the same Code says 'the sentence shall be executed at such place and time as the Court may direct'. The whipping need not, therefore, be inflicted in public; and at least one Local Government, that of Bengal, has directed that it should be inflicted 'in the manner of school discipline."

The Hon'ble MR. RALEIGH said:—"The case in support of this amendment turns a good deal upon the general statement that the people of this country regard whipping as a hardening and degrading punishment. I wish to deal very considerately with a feeling of that kind, but it seems to me that in the case of a boy, the question whether whipping is more or less degrading than imprisonment, turns entirely on the circumstances of the case, and that, if advantage is taken of the provisions that the law gives, if the whipping be administered without undue publicity and severity, it is far less hardening to a boy, especially to a boy not belonging to the criminal classes, than a sentence of imprisonment would be. The case made by the Advocate General turns a good deal upon this, that if we make merely a general provision that whipping may be substituted for imprisonment for boys, that general provision may be abused. May I point out to my hon'ble friend that, if the word *may* is to be used in this argument, it is possible to make a case against any existing law whatever. Every criminal law operates for good or for mischief, according to the judgment with which it is applied, and if it be assumed that a Magistrate inflicts whipping when the case is clearly one that ought not to be brought under the criminal law at all, or where the offence is one unsuitable for that penalty, that would be an act on the part of the Magistrate proving him more or less unfit for his position and rendering him liable to censure. Then it is argued that the sentence of whipping is irreparable. I think perhaps that argument has been pushed a little too far, considering that the effects of whipping (it is a sharp and summary punishment) are not of very long duration, and to say that the effects of whipping are more irreparable than the effects of detention in imprisonment upon a boy, appears to me to be rather an exaggerated way of stating the case. And let me point out this, that if we take the course which the Hon'ble Mr. Mehta proposes and my hon'ble and learned friend supports, and we empower the Governor General to specify the offences, or if we go the whole length of what has been suggested by my hon'ble friend Mr. Rees and put the offences into an Act of this Legislature, we shall still, from my hon'ble friend Mr. Woodroffe's point of view, not be very much better off than we were before, because we shall have to specify a large number of offences where the choice between whipping and imprisonment will still call for the exercise of magisterial discretion, where mistakes of the kind described by the Advocate General may be made, and where the effects of the mistake will be just as serious as in the case of those offences which we should leave out. Whilst therefore I support any proposal that we should make a general provision that whipping may be substituted for imprisonment in the case of juvenile offenders, we should trust to the discretion of the Magistrate, under the supervision to which Magistrates are subjected in this country, to determine which are the offences to which they ought to apply the general rule."

The Hon'ble MR. MEHTA said:—"I should like to say one word in reply. All that the Hon'ble Mr. Rees says in opposition to my amendment is that I do not go far enough. He is prepared to go very much further, but, as I am not able to go all the way, he won't accompany me even part of the way. With regard to what has fallen from the Hon'ble Mr. Ibbetson and the other Hon'ble Members who have spoken in support of the original section, it seems to me they have not met the case which I have put before the Council. Their case is that Magistrates, under the section as it stands, will inflict whipping in lieu of imprisonment, but it has to be remembered that the section does not only include offences which are punishable with imprisonment only. It includes

also offences which are punishable with fine or imprisonment, and all those cases would be included under clause (*b*); so that Magistrates would have the right to inflict whipping in lieu of fine also. That, I submit, would be an intolerable state of things, and when it is remembered that there is no appeal from a sentence of whipping and that whipping once inflicted is irreparable, the necessity for proceeding with caution and discrimination is extremely urgent."

The Council divided:—

Ayes—9.	*Noes—11.*
The Hon'ble Mr. Allan Arthur.	The Hon'ble Mr. H. F. Evans.
The Hon'ble Rai Bahadur B. K. Bose.	The Hon'ble Mr. J. Buckingham.
The Hon'ble Mr. J T. Woodroffe.	The Hon'ble Mr. J. D. Rees.
The Hon'ble Kunwar Sir Harnam Singh.	The Hon'ble Mr. J. K. Spence.
The Hon'ble Rai Bahadur P. Ananda Charlu.	The Hon ble Nawab Faiyaz Ali Khan.
The Hon'ble Maharaja of Darbhanga.	The Hon'ble Mr. Denzil Ibbetson
The Hon'ble Mr. D M. Smeaton.	The Hon'ble Mr. T. Raleigh.
The Hon'ble Mr. G. Toynbee.	The Hon'ble Mr. C. E. Dawkins.
The Hon'ble Mr. P. M. Mehta.	The Hon'ble Mr. A. C. Trevor.
	The Hon'ble Major-General Sir E. H. H. Collen.
	His Honour the Lieutenant-Governor of Bengal.

So the motion was negatived.

The Hon'ble MR. WOODROFFE moved that the words "after making such enquiry (if any) as may be deemed necessary" and the words "the finding of the Court in all cases being final and conclusive" in the Explanation to section 5 of the Whipping Act, 1864, as proposed to be substituted by clause 2 of the Bill, as amended by the Select Committee, be omitted. He said:—"Among the papers circulated by the Government of India with this Bill will be found the remarks of the Judicial Commissioner of Sindh, to which special attention has been drawn by the Bombay Government. In those remarks it is pointed out that the proviso, in the opinion of the Court, should be final and conclusive on the point of age is properly speaking a legislative direction and cannot appropriately be included in a mere explanation. This proviso found no place in Act VI of 1864. It was first introduced by section 6 of Act III of 1895. Beyond the suggestion that it was sometimes found difficult to determine a boy's age and that it was thought desirable that the opinion of the Court of first instance should be taken as final, Sir Alexander Miller, in moving that the Report on the Bill should be taken into consideration by the Council, made no case for this strange addition to the law. For upwards of 30 years the law had stood unaltered. It had been declared by the High Court of Bombay very shortly after the Act of 1864 was passed that unless an accused person was found to be under the age of 16 he could not be punished under Act VI of 1864. It was not suggested then, nor is it suggested now, that there had or have occurred cases in which there had been any failure of justice owing to the supposed difficulty of ascertaining a boy's age. It was not suggested then, and it is not suggested now, that it is more difficult to determine whether a boy is under 16 than a man is over 45; yet under section 393 of the Criminal Procedure Code no male person can be whipped if the Court considers him to be more than 45, and that section, be it observed, further contains, and that rightly, no such legislative direction as is appended to the explanation now under consideration, though it would in the vast majority of cases be, I think, more difficult to determine whether a man is over 45 than whether a boy is under 16. Moreover, as the law now stands, no appeal can be preferred by a convicted person in cases in which the Court of Session or the District Magistrate or other Magistrate of the first class passes a sentence of whipping only. See section 413 of the Criminal Procedure Code. There is therefore no such difficulty to be encountered as that which was suggested by the Hon'ble the then Legal Member in moving the introduction of this clause in 1895 nor, except in a certain limited class of cases, any question as to the finality of the decision of the Court of first instance. This being so, it

appears to me in the highest degree desirable that there should appear upon our Statute Book nothing which can in any way throw doubt upon the necessity for the exercise of the duty of determining judicially whether the delinquent does or does not come within the provisions of the law. The determination of the sentence is, I venture to think, no less important than the determination of the commission of the offence. Moreover, a sentence of whipping is irreparable, and I am hardly prepared to go so far as the Hon'ble Legal Member (Mr. Raleigh) does when he says that the memory of it quickly passes away. That very much depends upon the hand which has laid it on, and even though the punishment of whipping a juvenile offender be conducted as it may be conducted under circumstances not involving the publicity of the whipping, yet the fact that that person has been whipped is a fact which cannot be concealed, and Members of Council will remember that in this country a juvenile offender means and includes a man who has probably two or three children. You are extending the punishment of whipping very far, and are, as a matter of fact, making persons punishable under this section, who are not in any true or real sense of the term juvenile offenders. It is, I venture to think, also in the case of juvenile offenders even more necessary perhaps than in the case of adults to see that no such brand should be fixed upon them. They are not old, hardened, or habitual offenders, and the disgrace attendant upon a whipping in this country is not looked upon in the light of a tunding at Winchester or similar punishment at our public schools. We have to deal with the people of this country and their feelings in estimating the propriety of the punishment which should be meted out. I venture to think, further, from another point of view, that it is most desirable that all Magistrates, especially those from whose decisions there does lie an appeal, should be bound to exercise their functions judicially. There are far too many cases, unfortunately, to be found in our reports of sentences of whipping improperly passed and carried into immediate execution, to render it in any degree proper for a Magistrate to pass a sentence of whipping without making due enquiry. The nature and extent of that enquiry must, of course, vary with the circumstances of each particular case, but should it go forth that it rests with the Magistrate to determine whether he will make any enquiry or not, there will, I very much fear, be very many more instances in which whipping will be inflicted upon persons not liable to be so punished than at present. In my opinion, the changes that have been introduced into the explanation in the Select Committee, so far from indicating, as in the Report it appears to be thought, to the Courts the necessity of making an enquiry in cases in which an enquiry is necessary, confers upon them the arbitrary power of determining, and that finally, whether any enquiry is necessary or not. For my part, I would very much have preferred that, if that explanation were to stand, it should stand as it did in the Bill as originally reported on. The words "if any" introduced in the explanation seem to me to forebode mischief, and it is wholly unexplained why there should be a different language introduced into our law in the case of the whipping of juveniles and whipping of adults. The law as regards adults provides that 'if it considers him to be above 45.' Why not in precisely the same language 'considers him or thinks him to be over 16'? I would therefore suggest that at least our law should be consistent, and that there is no reason why juveniles should be treated differently from adults. The Court considers the matter and arrives at its conclusion only upon evidence. By the adoption of the proposed amendment, whether there lies an appeal or not, Magistrates will understand that there is a duty laid upon them the breach of which will subject them to the animadversion of the High Court."

The Hon'ble MR. IBBETSON said:—"I find myself unable to accept this amendment. I take the second part of the proposal first, namely, to strike out the provision that the finding of the Court as to the age of a juvenile offender shall be final and conclusive. I have listened most attentively to all that has fallen from the lips of the hon'ble and learned Advocate General, and I am still wholly unable to realize what practical effect he proposes to

himself as likely to flow from his amendment. I understand the suggestion underlying the proposal to be that, under the law as it stands, Magistrates are careless in coming to a conclusion in the matter of age. I confess that I cannot see how the excision of the words in question will make them more careful. If the Magistrate is a 1st class Magistrate, there is no appeal from his decision, and his finding is final and conclusive, whether the Whipping Act says so or not, and he knows it. If he is not a 1st class Magistrate, an appeal lies. But since sentences of whipping only, which are the sole sentences that can be passed under the section, are carried out at once, the appeal is practically from the conviction only, which is not affected by the question of age. Thus, I do not think that the amendment will attain the object with which it is proposed.

"On the other hand, there seem to me to be positive objections to the proposal. There are numerous 2nd class Magistrates, specially empowered to pass sentences of whipping, from whose decision an appeal lies. (I am taking, for the present, the law as it stands, without reference to the Hon'ble Sir Harnam Singh's amendment.) Now it may be fair enough that the accused should have an appeal from the conviction, so as, if possible, to clear his character by proving his innocence of the charge. But there is nothing to be gained by allowing him to appeal also on the question of age, which affects, not his guilt or his innocence, but merely the legality of a punishment which has already been inflicted. We all know how greatly the liberty of appeal is already abused in India. The proposed amendment will simply give a new opening to the petition-writer or to the unscrupulous pleader; and we shall have the money of the people and the time of the Courts wasted upon the question, whether the age of a native lad, who has already had his whipping, is 15½ years or 16½. The provision in question has been part of the law of India for the past five years, and I see no necessity whatever to alter it.

"As for the other proposal, to omit the words 'after making such inquiry (if any) as may be deemed necessary', the suggestion to insert these words emanated, I think, from my hon'ble friend Mr. Mehta. It struck me, and I think the other members of the Select Committee also, as an eminently reasonable and proper suggestion. The words 'if any' were inserted to make it clear that no inquiry need be made in the case, say, of a boy of 12 years, who was obviously and undoubtedly under 16 years of age. It seems to me that the law, as it stands in the Bill, is exactly what is wanted. It provides for a final decision upon a point which must be settled on the spot, after a summary inquiry when there is any room for doubt, by the Magistrate who has the lad before him, and who is really the only person capable of deciding. It is notoriously impossible to ascertain exactly the age of a native of the poorer classes. And if a lad whose age cannot be ascertained exactly is so developed physically that he looks as if he were 16, it surely is only reasonable that he should be treated as if he really was 16; for the probability is that his mind and character will have developed together with his body."

The Hon'ble MR. REES said:—"My Lord, I cannot see that because it is difficult to decide whether a man is over 45, an attempt should not be made to deal with the question whether a boy is under 16, and it is not so long since I exercised the functions of a Magistrate that I cannot remember how the time of that unfortunate functionary is wasted, whenever the law gives the opportunity. The fact is, in regard to the man and the boy the decision is pure guess work. This seems to me to be an additional reason why all the offences for which whipping can be administered should be stated in the Act. I would oppose this amendment."

The motion was put and negatived.

The Hon'ble SIR HARNAM SINGH moved that the following clause be added between clauses 2 and 3 of the Bill, as amended by the Select Committee, and that the present clause 3 be renumbered clause 4:—

"3. (1) Notwithstanding anything in the Code of Criminal Procedure, 1898, an appeal shall lie in every case in which a juvenile offender has been sentenced to whipping, and no such sentence shall be executed until a period of fifteen days has elapsed from the date of

V of 1898.

sentence, or, if an appeal is made within that time, until the sentence is confirmed by the Appellate Court.

"(2) The Judge or Magistrate who has passed any such sentence shall have all such powers of admitting any such juvenile offender to bail as are conferred on Appellate Courts by section 426 of the Code of Criminal Procedure, 1898:

V of 1898.

"Provided that, if no application for bail is made at the time when such sentence is passed, the sentence shall, notwithstanding anything in sub-section (1), be carried out forthwith at such place and time as the Court may direct."

He said:—"As it has been practically decided to extend the Whipping Act to offences punishable by laws other than the Penal Code, I would suggest that whipping be lightly administered in the form of school discipline, as provided in the Criminal Procedure Code, in the presence of a District Magistrate or a Magistrate having 1st class powers, and that the punishment be inflicted in a place not exposed to public view, and as marked a difference as possible be made between the whipping of a juvenile offender and the whipping of an adult. I would also suggest that a right of appeal be given, and the juvenile offender be released on bail till the result of the appeal is known. It does not seem equitable that a juvenile offender, who, if he were sentenced to a term of imprisonment, would have, in most cases under the Code, a right of appeal, should, simply because a different form of punishment is arbitrarily substituted for that term of imprisonment, lose his right to have the question of his sentence and conviction reconsidered, and I therefore beg to move the amendment of the Bill which stands in my name."

The Hon'ble MR. IBBETSON said:—"I am unable to accept the proposal to allow an appeal in the case of all sentences of whipping which are passed upon juveniles. It is not desirable to add to the liberty of appeal which is already enjoyed except on grounds of the clearest necessity. And this seems to me to be pre-eminently a case in which it is not advisable to allow an appeal. If a lad is to receive 5 or 10 strokes by way of school discipline, he should receive them at once, and have done with it. I cannot conceive why he should have a right of appeal which is denied to an adult who is to receive 30 stripes that may perhaps mark him for life. And what strikes me most forcibly about the proposal is, its cruelty to the boy himself. For the sake of the one boy in a hundred, whose conviction will be upset, the other 99 are to be kept waiting for a fortnight, and for as much longer as the Appellate Court may take to decide the appeal, with the whipping hanging over their heads, in terrified apprehension, which is infinitely worse than the reality. Surely, if there ever was a case which it is desirable to dispose of promptly, it is that of the whipping of a juvenile.

"Apart from the merits of the proposal, moreover, there are other grounds on which it seems to me to be open to strong objection. If the amendment is carried, a Magistrate will turn to section 413 of the Criminal Procedure Code and find the following:—

'Notwithstanding anything hereinbefore contained, there shall be no appeal by a convicted person in cases in which a Court of Session or the District Magistrate or other Magistrate of the 1st class passes a sentence of * * * * * whipping only,'

"He will then turn to the Whipping Act,—and it must be remembered that under that Act a sentence of whipping passed upon a juvenile offender as such must be a sentence of whipping only,—and he will find the following:—

'Notwithstanding anything in the Code of Criminal Procedure, 1898, an appeal shall lie in every case in which a juven ile offender has been sentenced to whipping.'

"The fact is that the proposal is really one to amend, not the Whipping Act, but the Code of Criminal Procedure. It is not yet two years since that Code was passed in its present form, after full discussion; and I think that it would require far stronger grounds than have been shown in the present instance to justify the virtual repeal of one of its provisions."

The Hon'ble RAI BAHADUR ANANDA CHARLU said:—"In 1889 or 1890 two cases occurred in this Presidency, with which every one in Calcutta must

be familiar. In the first of those cases, a Magistrate inflicted the sentence of whipping and immediately carried it out. The matter went up before the High Court, and that Court set aside the conviction and passed severe remarks on the impropriety of the sentence having been carried out. Before the same Magistrate, and soon after, another case came up similar in nature. The Magistrate had the perversity again to inflict the sentence of whipping and to carry it out, setting the admonitions of the High Court deliberately at naught. The High Court handed the Magistrate up to the Government, and the result was, that he was placed in a situation in which he could not exercise the powers conferred upon him by the Whipping Act. But I am told, facetiously I hope, that the officer was promoted in consequence.

" Reference was made to the fact that the Criminal Procedure Code was only amended so recently as in 1895, and it is too soon to meddle with it. But it so happens, and that more recently still, *i. e.*, so lately as June or July, 1899, that another Magistrate was found to do exactly the same thing, and the High Court, in setting aside the conviction, could do nothing more than regret at the whipping having been administered. This shows how the necessity for staying the sentence till the appeal is disposed of is extremely urgent. Certain reasons were assigned by the Hon'ble Mr. Ibbetson in support of his position. The very same reasons I claim in support of the amendment before us. He says that there will be a delay in the disposal of the appeal and that the sentence of whipping would be hanging over the head of the culprit in the interval. I think that when an inconsiderate juvenile offender has this interval, after knowing what punishment the error he had drifted into brought upon him, he will very probably reflect and repent of it and avoid becoming callous in consequence of undergoing the penalty in that spirit. The effect of delay may thus only prove salutary and not harmful."

The Hon'ble MR. REES said :—" My Lord, my hon'ble friend Mr. Ananda Charlu and I, in the last five years, have generally presented the spectacle of a united family from Madras. On this occasion I regret that I cannot agree with him. I would oppose the proposed interpolation of a wholly new and vital section between clauses 2 and 3 of the Bill. I would myself prefer that every offence for which whipping may be awarded should be stated in the Bill, as I said in speaking on the first motion, but I cannot think it desirable to provide on this occasion a system of bail and appeal for the whole law relating to the whipping of juvenile offenders. It is contrary to the conception of providing a different class of procedure for juveniles, and it seems to me that either the law should enact that a boy convicted of a certain offence, for which the Legislature had deliberately decided whipping should be inflicted, should be sentenced and whipped outright, or that in regard to such an offence, the ordinary procedure which obtains in respect of adults should apply. To release a boy on bail, and then after a long interval to call him up to be judicially whipped, seems to me to convert the homely birchen rod into a sword of Damocles, and to give a solemnity to personal correction, which is, in fact, somewhat foreign to the inherent character of corporal castigation.

" As it is evident from what I said in speaking to the first motion that I am opposed to the wholesale application of the rod to the backs of our younger fellow subjects, I have therefore the less scruple in opposing this amendment. If it is fated to become law, at least Local Governments should express their opinions of it and a Select Committee should sit upon it, for I hope and believe that Select Committees have not in India become, as a leading journal said yesterday morning of Select Committees elsewhere, ' instruments of insincerity, procrastination and oblivion.' My Lord, I trust this amendment will not slip through without undergoing that careful and prolonged examination which should be the prelude to all legislation. This matter should be taken up, I think, when a revising and consolidating Act is undertaken.

" I ask Your Excellency's leave to refer to what my hon'ble friend Mr. Mehta said, *viz.*, that I would go the whole way with him but not half way. Surely, if an Hon'ble Member thinks that offences punishable with whipping should be specified in the Act, Mr. Mehta's amendment, equally with the section, is open to objection

and should be rejected. On the other hand, to object to one section as it stands is no sufficient ground for rejecting the whole Bill."

The Hon'ble MR. RALEIGH said:—"The main part of the hon'ble and learned Member's contention in favour of the amendment is the same argument as that used with regard to the hard cases, which I have already described as rather misleading in reference to another amendment proposed by my hon'ble friend the Advocate General. Mr. Charlu thinks that the delay which the Bill involves will have an excellent moral effect, because it will give the offender time for repentance. It appears to me that that effect of delay in the execution of a sentence is, to say the least, a little uncertain. There is another effect of delay, which is almost certain, and this is the consideration which I wish to suggest to Council. If you allow a longer delay for appeal, it becomes objectionable to carry out the sentence at all, and there is a certain cruelty in saying to a boy 'you can go away now, and after three months you will be brought back, and then you will be whipped.' I think the ordinary feeling would be against that, and I have not the least doubt that, if we allow an appeal, the effect would be largely to hamper and pervert the operation of the law. For these reasons I vote against the amendment."

The motion was put and negatived.

The Hon'ble MR. IBBETSON moved that the Bill as now amended be passed. He said:—"My Lord, I gather from the question that was asked of Your Lordship at an early stage in the course of the debate, that some remarks may possibly be made upon the general principle on which the Bill is based, and I may therefore be allowed to say a very few words in support of it. It is no new principle. It was affirmed 34 years ago, when the Whipping Act of 1864 was passed, that whipping is often the most suitable form of punishment for a juvenile: and the present Bill simply extends that same principle to offences which have, for the most part, been created since the Act of 1864 became law—extends it, indeed, in a restricted form, since it does not authorize whipping for any offence which is punishable with fine only.

"I confess myself unable to understand the assertion that a moderate whipping, inflicted upon a young lad under proper conditions, must necessarily harden and degrade him. It would not do so if inflicted by his father, or by his schoolmaster: and I fail to see why it should do so, merely because it is inflicted by the order of a Magistrate. At any rate, association, for ever a short time, with the class of juvenile criminals which are too often to be found in our jails, may do him an irreparable injury; while the disgrace of incarceration in jail seems to me, to say the least of it, to be as great as that of whipping. I fully realize that the feelings of the natives of India on the subject of corporal punishment are very different from our own. I have often had reason to regret this fact in connection with the management of schools. We are, however, bound, in legislation such as this, to give the fullest weight to those feelings as they exist. But if the effects of whipping young lads were really so disastrous as we are told, surely, during the 35 years for which the Act has been in operation and during which many thousands of lads must have been whipped, we should have had some more tangible evidence of the evil effects of our legislation than has so far been put before us"

The motion was put and agreed to.

INDIAN COMPANIES (BRANCH REGISTERS) BILL.

The Hon'ble MR. DAWKINS moved that the Report of the Select Committee on the Bill to authorize certain Companies registered under the Indian Companies Act, 1882, to keep branch registers of their members in the United Kingdom, be taken into consideration. He said:—"I would like to draw attention to one modification introduced by the Select Committee into the original draft Bill. In the original draft authorization to Indian Companies to establish branch registers in the United Kingdom was limited to Companies having a capital of not less than Rupees twenty lakhs and having existed for three years. These limitations do not exist in the case of

the Companies Colonial Registers Act, which we have been following, and in view of the almost unanimous representations of the Chambers of Commerce that these restrictions would tend to minimise the utility of the Act, the Select Committee decided to withdraw them. I may also ask leave to call attention to the notifications which have been placed upon the table, conveying exemption from Indian stamp and probate duty of shares of Indian Companies liable to payment of such duties in the United Kingdom, owing to their inscription on the branch register in London. After the Bill had left the Select Committee, my learned friend the Hon'ble the Advocate General suggested that these exemptions, which were promised in the Statement of Objects and Reasons, should be incorporated in the Bill itself. It was, however, felt to be inexpedient to modify two existing Acts by a third Act and to take powers for giving exemptions when such power was already existing and vested in the Governor General in Council under the Indian Stamp Act and Court-fees Act. It was, therefore, decided to meet the practical difficulty pointed out by my learned friend the Hon'ble the Advocate General, namely, that the Act as it stands would not acquaint an investor with the fact that this exemption existed, by an undertaking that the notifications to issue under the Stamp and Court-fees Acts should be bound up in the pamphlet form in which the new Act will be sold to the public. These are the notifications which lie on the table."

The motion was put and agreed to.

The Hon'ble MR. REES moved that after the word "discontinued", in clause 3, sub-clause (2), of the Bill, as amended by the Select Committee, the words "and the Registrar shall record such notice" be added. He said :—" My Lord, in clause 3, sub-clause (2), no provision is made for recording the notice of situation of the British register. It is not to be supposed that the Registrar of Joint Stock Companies will consign such notices to his waste-paper basket, but the recording of the notice is a judicial act, and it is expressly provided by section 64 of the Indian Companies Act that the Registrar shall record the notice of situation of the registered office in India. A similar provision should apparently be made in respect of notice of situation of the British register, since the Bill is, under clause 5, to be construed as one with the Indian Companies Act. It happens, moreover, that in some provinces Registrars are under existing rules forbidden to record, upon receipt of a fee, anything the record of which is not expressly enjoined by the Companies Act."

The Hon'ble MR. DAWKINS said :—" I think that we should be well advised in accepting this amendment. As the Act stands, the Registrar would probably not deposit any notice given to him in the waste-paper basket, but, at any rate, the amendment will provide that he shall not do so under any circumstances, and it will certainly render the Bill more complete."

The motion was put and agreed to.

The Hon'ble MR. DAWKINS moved that the Bill, as now amended, be passed.

The motion was put and agreed to.

LOWER BURMA COURTS BILL.

The Hon'ble MR. IBBETSON moved that the Bill to consolidate and amend the law relating to the Courts in Lower Burma be referred to a Select Committee consisting of the Hon'ble Mr. Raleigh, the Hon'ble Mr. Smeaton, the Hon'ble Rai Bahadur Ananda Charlu, the Hon'ble Mr. Woodroffe and the mover.

The motion was put and agreed to.

The Council adjourned to Friday, the 2nd March, 1900.

J. M. MACPHERSON,

Secretary to the Government of India,

Government of India Notifications, Appointments, Promotions, etc.

MILITARY SECRETARY'S OFFICE.

NOTIFICATION.

Calcutta, the 21st February 1900.

No. 220-*M*.—His Excellency the Viceroy and Governor General will leave Calcutta for Assam on Friday, the 2nd March 1900, starting from Sealdah by Special Train at 10-45 P.M. (Calcutta time). His Excellency's departure from Calcutta will be *private*.

His Excellency will visit Dibrugarh, Tezpur and Gauhati, and return to Calcutta on Thursday, the 15th March 1900, arriving at Sealdah by Special Train at 7 P.M. (Calcutta time). His Excellency's arrival at Calcutta will be *private*.

All covers intended to reach His Excellency the Viceroy and Governor General and party during His Excellency's journey should be addressed "Viceroy's Camp," without the addition of any post-town.

The party accompanying His Excellency on tour is as follows:—

Her Excellency Lady Curzon of Kedleston.
Sir William Cuningham, K C.S.I., Foreign Secretary.
Mr. W. R. Lawrence, C.I.E., Private Secretary.
Major the Hon'ble E. Baring, Military Secretary.
Lieutenant-Colonel E. H. Fenn, C.I.E., Surgeon to the Viceroy.
Captain R. G. T. Baker Carr, Aide-de-Camp.
Captain W. McL. Campbell, Aide-de-Camp.

All communications connected with business of a mere routine nature should be sent, as usual, to the headquarters of the several departments.

By Command,

E. BARING, *Major*,
Military Secretary to the Viceroy.

A. F. COX,
Comptroller-General.

The 23rd February 1900.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

INVENTIONS and DESIGNS.

Calcutta, the 22nd February 1900.

NOTIFICATIONS.

No. 708 P.—APPLICATIONS in respect of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, during the week ending 17th February 1900:—

No. 66 of 1900.—A. Subramanya Sarviy, cultivator, son of Arunachala Sarviygar, Athicadu, Theckur, Tirupathur Taluk, Sivaganga Jamin, Madura District, Madras Presidency. *Triangular joint ploughs.*

No. 67 of 1900.—Francis Edward Elmore, electrometallurgist, of Pontefract road, Hunslet, Leeds, in the county of York, England. *Improvements in separating metallic from rocky constituents of ores and apparatus therefor.*

No. 68 of 1900.—Henry James Kimman, machinist, of 1235 Lawndale Avenue, Chicago, Cook county, Illinois, U. S. A. *Improvements relating to pneumatic rivetting apparatus.*

No. 69 of 1900.—George Falvey Beyts, district engineer, East Indian Railway, Allahabad. *An improved tent table.*

No 70 of 1900.—Eugen Sandow, athlete, of 32 St. James street, London, England. *Improvements in dumb-bells for physical culture exercises.*

No. 71 of 1900.—Theodor Eugen Schiefner, manufacturer, of 7 Doblhofgasse, Vienna, I., in the empire of Austria. *A process of mercerisation of yarns and threads made from vegetable fibres.*

No. 72 of 1900.—Harry M. Girling, engineer and tea planter, of the Cherras, Cachar. *An open top hood for Messrs. Jackson's cross action rolling table.*

No. 73 of 1900.—Ruth Macbeth, diplomaed midwife and sick nurse, of Nicholson road, Lahore, in the Punjab, India. *An apparatus for use in midwifery to be called the "Branfoot portable douche stand."*

No. 74 of 1900.—Mydial Singh, commission agent of Lahore foundry and ginning factory, Lahore, of Barnawa in Meerut district, living at present at Rohtak district. *A waterlift for irrigation and drinking purposes.*

No. 709 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, North-Western Provinces and Oudh. These and other specifications are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 233 of 1899.—Tanjore Kadambur Amurthalinga Achary, goldsmith and manufacturer, residing at 9 Gungannen street, Washermanpetta, Madras. *A contrivance for lifting and self-tilting water from wells and tanks to be called "The Havelock Water-lift."* (Specification filed 6 November 1899.)

No. 248 of 1899.—The Printing Arts Company, Limited, of 119 Shaftesbury Avenue, in the County of London, England. *Improvements in multi-colour printing and in apparatus therefor.* (Specification filed 13 February 1900.)

No. 249 of 1899.—John James Marsland, Engineer, of Nesbit Road, Mazagon, Bombay. *An improved water closet for the use of natives of India, to be called the "Aryan water closet."* (Specification filed 12 February 1900.)

No. 253 of 1899.—Acetylite limited, manufacturers, and John Harwood Clarke, engineer, both of 400, New John street, west, in the city of Birmingham. *Improvements in apparatus for the production of acetylene gas.* (Specification filed 12 February 1900.)

No. 254 of 1899.—Valdemar Poulsen, engineer, of Alhambravej 17, Copenhagen, Denmark. *A method of and apparatus for effecting the storing up of speech or signals by magnetically influencing magnetisable bodies.* (Specification filed 12 February 1900.)

No. 255 of 1899.—Albert Silbermann, manufacturer of Berlin, in the Kingdom of Prussia' German Empire. *A multiplex and duplex printing telegraph.* (Specification filed 15 February 1900.)

No. 256 of 1899.—The French-Hickman Flax Fibre Company, Limited, a corporation organized and existing under and by virtue of the Companies Act, 1862—1890, and having registered offices at 23, 24, and 25 Billiter Street, London, E.C. *Fibrous stock and process of making the same.* (Specification filed 15 February 1900.)

No. 261 of 1899.—Thomas Ballantine, engineer, of Grant Street, South Melbourne, in the Colony of Victoria, Australia. *A child's carriage or perambulator.* (Specification filed 15 February 1900.)

No. 318 of 1899.—The Acetylene Purifying Company, Limited, manufacturers and merchants of 83, Farringdon Road, in the City of London, England. *An improved process for purifying acetylene and apparatus for same.* (Specification filed 9 February 1900.)

No. 346 of 1899.—Joseph Vogt, manufacturer, of Massevaux, Alsace, Germany. *Improvements in apparatus for deep boring.* (Specification filed 9 February 1900.)

No. 347 of 1899.—William Mather, engineer, of Salford Iron Works, Manchester, in the County of Lancaster, England. *Improvements in the treatment of textile materials with liquids, vapours or gases, and apparatus for that purpose.* (Specification filed 12 February 1900.)

No. 348 of 1899.—William Mather, engineer, of Salford Iron Works, Manchester, in the County of Lancaster, England. *A process and apparatus for continuous bleaching of fabrics in open condition.* (Specification filed 12 February 1900.)

No. 368 of 1899.—George Higgins, civil engineer, of "Hybla," Wallace Street, Toorak, in the Colony of Victoria. *Improvements in suction dredges.* (Specification filed 9 February 1900.)

No. 466 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230 Stratford Avenue, Pittsburg, in the County of Allegheny, State of Pennsylvania, U. S. A. *Improvement in method of and means for varying the speed of direct current electric motors.* (Specification filed 13 February 1900.)

No. 468 of 1899.—Harry Phillips Davis, electrical engineer, of 327 Neville Street, Pittsburg, Gilbert Wright, electrical engineer, of 409 Ross Avenue, Wilkinsburg, and Alexander Jay Wurts, engineer, of Fifth Avenue, Pittsburg, all in the County of Allegheny, State of Pennsylvania, U. S. A. *Improvements in controllers for electric motors.* (Specification filed 13 February 1900.)

No. 12 of 1900.—Harry Phillips Davis, electrical engineer, of 327 Neville Street, Pittsburg, and Gilbert Wright, electrical engineer, of 409 Ross Avenue, Wilkinsburg, both in the County of Allegheny, State of Pennsylvania, U. S. A. *Improvements in electric circuit breakers.* (Specification filed 15 February 1900.)

No. 13 of 1900.—Harry Phillips Davis, electrical engineer, of 327 Neville Street, Pittsburg, in the County of Allegheny, State of Pennsylvania, U. S. A. *Improvements in fuse blocks for electric circuits.* (Specification filed 15 February 1900.)

No. 14 of 1900.—Harry Phillips Davis, electrical engineer, of 327 Neville Street, Pittsburg, and Frank Conrad, electrical engineer, of 709 Whitney Avenue, Wilkinsburg, both in the County of Allegheny, State of Pennsylvania, U. S. A. *Improvements in electrical measuring instruments.* (Specification filed 15 February 1900.)

No. 710 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 80 of 1888.—Henry Thompson. *Improvements in the method of and apparatus for drying tea leaf.* (From 17 April 1900 to 17 April 1901.)

No. 12 of 1889.—Alfred Nobel. *Improvements in the manufacture of explosives.* (From 23 February 1900 to 23 February 1901.)

No. 248 of 1890.—John Donnelly. *Improvements in the manufacture of axle boxes.* (From 14 March 1900 to 14 March 1901.)

No. 152 of 1892.—Henry Thompson. *Improvements in the method of and apparatus for drying tea leaf and the like.* (From 10 March 1900 to 10 March 1901.)

No. 306 of 1892.—Rudolf Diesel. *A process for producing motive work from the combustion of fuel.* (From 19 April 1901 to 19 April 1902.)

No. 12 of 1893.—Edward Garlick. *A refuse and excrement incinerator, to be called " Garlick's patent refuse and excrement incinerator."* (From 29 June 1900 to 29 June 1901.)

No. 212 of 1893 —James Watson. *Improvements in baling presses.* (From 2 March 1900 to 2 March 1901.)

No. 242 of 1893.—Arthur Octavius Wright. *Improvements in the manufacture of metal laths for use in the formation of ceilings roofs partitions and other such purposes.* (From 7 March 1900 to 7 March 1901.)

No. 243 of 1893.—Arthur Octavius Wright. *Improvements in laths and sheets for forming ceilings floors partitions and other such like purposes and in the machinery for manufacturing the same.* (From 7 March 1900 to 7 March 1901.)

No. 352 of 1893.—Henry Thompson. *A new or improved process for rolling tea and improvements in tea rolling and curling machines applicable thereto.* (From 27 June 1900 to 27 June 1901.)

No. 88 of 1894.—Alfred Dieudonné Estienne. *Improvements in machines for decorticating ramie and other plants.* (From 27 April 1900 to 27 April 1901.)

No. 314 of 1894.—Isaac John Collins. *Improvements in overhead regenerative gas lamps.* (From 23 February 1900 to 23 February 1901.)

No. 316 of 1894.—John Arthur Torrens. *An improved appliance for picketting horses.* (From 23 February 1900 to 23 February 1901.)

No. 366 of 1894.—William McDonnell Mackey. *Improvements in making potassic cyanid and apparatus therefor.* (From 15 February 1900 to 15 February 1901.)

No. 40 of 1895.—Hermann Reisenegger. *Improved manufacture of dry alizarine.* (From 20 March 1900 to 20 March 1901.)

No. 223 of 1895.—George Murray Collom. *"Collom's patent mesh cleaning apparatus"* (From 18 February 1900 to 18 February 1901.)

No. 14 of 1896.—William Garlick, Edward Garlick, and Adolph Gothard Christiansen. *The manufacture of decorative cement flooring tiles.* (From 29 February 1900 to 29 February 1901.)

No. 711 P.—The following Notification is published in substitution for that bearing No. 550 P., dated the 14th February 1900, which appeared in Part II of the *Gazette of India* dated the 17th idem and is hereby cancelled :—

WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act, 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2) of the said Act, the exclusive privilege of making, selling and using the said inventions in British India, and of authorising others so to do, has ceased :—

No. 134 of 1895.—Charles Walke. *The safety trace hook.* (Specification filed 8 November 1895.)

Fee in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof—

The sum of R50 for the above invention.

No. 37 of 1888.—Thomas Toussaint Watson. *Pulling punkhas by a machine to be driven by water or steam power, compressed air, electricity, vacuum or other motive power.* (Specification filed 8 November 1888.)

Fee in respect of the continuance of an exclusive privilege—

4 (*h*) After the expiration of the tenth year and before the expiration of the eleventh year from the date of the filing of the specification —

The sum of R100 for the above invention.

NOTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be addressed to the "Secretary to the Government of India, Department of Revenue and Agriculture (PATENTS BRANCH), CALCUTTA."

The Office of the Secretary under the Act is open for the transaction of business from 11 A.M. to 4 P.M. on all days except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's office are now on sale to the public at one anna and eight annas a copy, respectively.

Attention is requested to the rules made by the Government on the 10th October, 1895, in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitor's room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified; or, if the tenth day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

S. C. HILL,

Offg. Secy. under the Inventions and Designs Act, 1888.

Catalogue of Books procurable from Thomason College Book Depot, Roorkee.

Application to be made to Curator.

CASH MUST ACCOMPANY ORDER. ARTICLES WILL BE SENT BY VALUE-PAYABLE POST TO PERSONS IN GOVERNMENT EMPLOYMENT ONLY.

It is requested that letters containing remittances be registered.

N.B.—The Revised Prices herein entered cover the cost of packing, postage, and other incidental charges (except commission for Value-payable supplies), and are for all purchasers other than resident College Students.

ROORKEE TREATISE ON CIVIL ENGINEERING IN INDIA.

Royal Octavo, with numerous Plates.

Volumes I and II are published in separate convenient sized sections, as below, but can be bound up if required:—

VOLUME I.*

Section	I.	Building Materials (1898),	R2-0.
„	II.	Masonry (1898),	R1-4.
„	III.	Carpentry (1898),	R1-8.
„	IV.	Earthwork (1892),	R1-4.
„	V.	Tools and Plant (never published).	

VOLUME II.*

Section	VI.	Buildings (1899),	R1-4.
„	VII.	Bridges (1897),	R4-4.
„	VIII.	Roads (1897),	R1-8.
„	IX.	Railways (1891),	R1-4.
„	X.	Irrigation Works.	(Under revision.)

ROORKEE MANUAL OF APPLIED MECHANICS.

Vol. I. Direct and Transverse Strain, principally by Analytical Methods. R7

„ II. The Stability of Structures, mostly by Graphic Methods (in the Press).

MANUALS.

VII. Surveying (by Major Firebrace, R.E.) (7th edition, with Curve Table). R3.

XIII. Drawing (by Lieut. R. Pulford, R.E.). † R6.

XIIIa. Drawing, First Principles of Geometrical (by do.) R1-4.

XIV. Simple Applied Mechanics, (3rd edition), Parts I and II in one. R1-8.

Simple Applied Mechanics, Part II (1st edition). 8a.

XV. Examples of Estimating. Comprising a progressive series of Estimates (with Plans of Buildings and Bridges, worked in detail). By P. Keay, Esq., and revised by C. C. Sullivan, Esq., Head Master (5th edition). R3-12.

XVI. Earthwork Estimating, with Practical Tables and Diagrams. By Major A. M. Brandreth, R.E. R1.

XVII. Specimens of Printing used in the College Drawing Course and Entrance Examinations. 6a.

Note.—The complete Treatise forms the course of the Civil Engineer and Upper Subordinate classes at the Thomason College in Civil Engineering. The other Manuals are the complete course for both Classes in the several subjects of which they treat.

MISCELLANEOUS.

ENGINEERING WORKS.

Curve Tables, complete, for laying any curve. 4a.

Scantlings of Timber for Roofs. Tables and investigation of formulæ for determining size of timbers for Flat Roofs from 8 to 22 feet span, and for Trussed Roofs from 16 to 50 feet span (2nd edition). By P. Keay, Esq., Head Master. 12a

Notes on Chemistry of Building Materials. R1-8.

Tate's Mechanism. R1.

Barman's Descriptive Mineralogy. R2-4.

* Date of Edition on sale.

† Originally published at R15, reduced to R6.

Useful Rules and Tables relating to Measurement of Timber. Rules for computing the cubic contents of Round Logs, as well as of Sawn Timbers, with Tables, etc. By Rai Kunhya Lal. R2-8.

O'Callaghan's Earthwork Tables for India, in one large sheet, 12a.; mounted on cloth and bound. R1-12.

Tables for Computing Earthwork in Distributaries and small open Channels, in use in Irrigation Department, N.-W. Provinces. 12a.

Tyndall's Hand-Book of Specifications. (In the Press.)

The Indian Engineer's Pocket Book. R1.

Wooden Bridges and Designs. By Rai Kunhya Lal. (In the Press.)

Blasting under Water (2nd edition). 10a.

Waugh's Instructions for Topographical Surveying R1.

Analysis of Lime and Cement Stones. By Murray Thomson, Esq., M.D., F.R.S.E. 6a.

Chart, giving by a graphic method the discharges of earthen channels up to 40 feet bed width, very useful for Projects. R1-6.

SCIENCE BOOKS.

Wilson's Inorganic Chemistry. R1-8.

MATHEMATICAL.

Boileau's Tables of Wages and Rent, and of the value of goods. Tables for converting Seers and Chittacks into decimals of a Maund, and Annas and Pies into decimals of a Rupee. With a few others of general utility (4th edition). R1-6.

Boileau's Tables of Log sin² ½ P (for computing time 4a.)

Cape's Logarithms, with Tables of Squares, Cubes, etc. R1-4.

Cape's Geometry. R1-4.

Cape's Mechanics. 8a.

Todhunter's Plane Trigonometry. R2-8.

Todhunter's Differential Calculus. R2-8.

Military Topography. 8a.

HINDUSTANI

Elements of Hindustani Grammar. 8a.

Technical Dialogues—English and Urdu. R1.

A Vocabulary of Common and Technical Words in English-Urdu. 12a.

History of India (*Itihas Timirnásak*), Hindi, Parts I and II. Both 6a.

Short Account of Ganges Canal (English and Urdu). Each 4a.

NOTE AND FIELD-BOOKS, etc.

Note-Books (Section paper), large. Each R1-4.

Surveying Field-Books (ruled). 12a.

Levelling Field-Books (English Pattern). R1-4.

" " (Canal "). R1-4.

" " (College "). R2-0.

P. W. D. Note-Book. R1-4.

" **Measurement Book.** R1-4.

Circular Card-board Protractors, 12 inches. R2.

British Burma, 19 Plans.
Central Provinces.
} Whole lot R2. Each 6a.

A set of Professional papers both loose and quarterly numbers inclusive of Railway freight R10. This is not quite complete.

PROFESSIONAL PAPERS ON INDIAN ENGINEERING.

(FIRST SERIES.)

Vol. I. (Quarterly, Nos. 1 to 5), bound R1-8.

Quarterly, Nos. 1, 2, 3, 4, and 5,
Vol. II, Quarterly, Nos. 6 and 7,
" **VI,** " **No. 25,**
" **VII,** " **Nos. 26, 27, 28, and 29,**
Extra No., April 1870.
} 4a. each, inclusive of postage.

(SECOND SERIES.)

Quarterly Numbers of Vols. I, II, and IX of the series, 4a. each, inclusive of postage.

Quarterly Number 41 A of Vol. X. Each 8a.

Cloth covers for Volumes of 1st and 2nd Series, at 8a. each.

Index to Professional Papers and loose Papers, 1st and 2nd Series, at 2a. each.

FERROTYPE PRINTING.

Chemicals and Lithographic Paper for this process can be purchased from Thomason College Book Depôt. Application to be made to the Curator.

Apparatus for Printing can be made up at the Roorkee Workshops, and all particulars obtained from the Superintendent.

CIRCULARS.

Circulars containing the Rules of admission to the different classes of the College will be forwarded to applicants.

J. CLIBBORN, *Lieut.-Col., I.S.C.,*
Principal, Thomason Civil Engineering College, Roorkee

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.

The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.

In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1876 :—

Terms of subscription payable annually in advance.

For the Complete Series, *including postage* . . . R22-8

	Without postage.			With postage.		
	R	a.	p.	R	a.	p.
For the Calcutta Series	10	0	0	12	8	0
„ each of the Madras, Bombay, and Allahabad Series	6	0	0	7	0	0
„ a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...			2	0	0
„ a part of each of the Madras, Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	...			1	0	0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit :—

	For town.			For motussil.		
	R	a	p.	R	a.	p.
For the Calcutta Series ; per copy	0	8	9	0	10	0
„ each of the Madras, Bombay, and Allahabad Series ; per copy	0	5	3	0	5	9
„ the Calcutta Series For the year	7	2	6	8	6	3
„ each of the Madras, Bombay, and Allahabad Series. For the year	4	4	6	4	11	0

Persons desiring to subscribe for, or purchase, the Report should apply to—

Superintendent, Government Press, Madras.

The Superintendent, Government Central Press, Bombay.

The Curator of Government Books, North-Western Provinces and Oudh.

The Officer in charge, Bengal Secretariat Book Depôt.

Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrapped of the Indian Law Reports, Calcutta Series, at the following rates payable in advance :—

	One page.	Half page.	Quarter page.
For one issue	R 20	R 14	R 9
„ three issues	„ 55	„ 36	„ 24
„ six „	„ 103	„ 68	„ 45
„ nine „	„ 145	„ 96	„ 64
„ twelve „	„ 180	„ 120	„ 80

Several volumes of the BENGAL LAW REPORTS, from August 1868 to December 1875, and FULL BENCH RULINGS, Parts I and II, are available at the following rates :—

	Without postage.			With postage.		
	R	a.	p.	R	a.	p.
Bengal Law Reports, for one year	20	0	0	22	8	0
Single copies, R2 per copy.						
Full Bench Rulings, Parts I and II	20	0	0	22	8	3

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta.

Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription R22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calender year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

PURE SULPHATE OF QUININE.

Manufactured at the Bengal Government Cinchona Plantation.

From 1st April, 1898, the price of this Quinine will be as follows :—

1-pound tin, R17, or, post-free, R17-12.
½ „ R8-8, „ R9-0.
¼ „ R4-4, „ R4-12.

Analysis shows this Quinine to be of the purest manufacture ; and it is guaranteed to be free from wilful mixture with the inferior alkaloids, Cinchonine and Cinchonidine. It is for sale only to Government officers, and only for cash, and may be had from the Superintendent, Botanic Garden, Seebpore, near Calcutta.

বঙ্গদেশের গবর্ণমেণ্টের সিন্‌কোনা আবাদে প্রস্তুত বিশুদ্ধ কুইনাইন।

১৮৯৮ সালের ১লা এপ্রেল হইতে এই কুইনাইনের নিম্নলিখিত মূল্য হইবে, যথা—

১ এক পৌণ্ড টিন ১৭৲ বা ডাকমাশুল বিনা ১৭৸৹
॥ আধ „ „ ৮॥৹ „ ৯৲
। শিকি „ „ । ৪।৹ „ ৪৸৹

পরীক্ষা করিয়া দেখা গিয়াছে যে এই কুইনাইন অতি বিশুদ্ধ রূপে প্রস্তুত করা হইয়াছে, এবং ইহা যে সিন্‌কোনাইন ও সিন্‌কোনিডাইন নামক অপকৃষ্ট ক্ষারের সহিত ইচ্ছা পূর্ব্বক মিশান হয় নাই তাহার গারাণ্টী দেওয়া যাইতেছে। ইহা নগদ মূল্যে কেবল গবর্ণমেণ্টের কর্ম্মচারীগণের নিকট বিক্রয় করা যাইবে, এবং কলিকাতার নিকট শিবপুরের কোম্পানির বাগানের সুপারিণ্টেণ্ডেণ্টের নিকট পাওয়া যাইতে পারে।

NORTH WESTERN RAILWAY.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, February 10th, 1900.

Very little rain has fallen in India during the past week. Conditions were disturbed in Persia on Sunday and Monday, and on Tuesday a very rapid fall of the barometer indicated the formation of a depression of moderate intensity in South Persia which gave snow at Teheran and heavy rain at Bushire. The depression was apparently an extensive one affecting a large tract of country, as there was a simultaneous rapid fall of the barometer in Baluchistan and North-West India accompanied by light rain at Quetta. The depression advanced rapidly eastwards during the next 24 hours and had entered South Baluchistan and Sind on Wednesday morning, but it had filled up to a great extent; and, as it advanced into South Rajputana, gave only light snow and rain in Baluchistan and the North-West Himalayas and light rain in the Punjab and Western Sub-montane districts of the North-Western Provinces. The largest amounts reported were only ·40 inch at Srinagar and a quarter of an inch at Minimarg, Mooltan and Quetta. By Friday morning the depression had apparently advanced rapidly into the North-Western Provinces but had almost completely filled up. Weather conditions, however, continued unsettled in Persia, Afghanistan and Baluchistan, and on Saturday pressure gave way briskly to rapidly in Baluchistan and North-West India, the fall being most marked in Upper Sind and the West Punjab. A depression was shown in course of formation in the Punjab and skies were thickly clouded or were overcast in the Punjab, the Upper India Hill districts and Upper Sind, but no rain had fallen.

Daily Summary.—*Sunday, February 4th.*—Pressure had risen slightly to briskly in the Central Provinces and Assam and had been steady or had risen

slightly elsewhere. A shallow low pressure area was lying over North Bengal. No rain had been reported. Mean temperature was in moderate defect in Lower Sind and normal in the Punjab, Gujarat and the Madras Coast. The excess in the remaining provinces was most marked in the Central Provinces, Burma, Orissa, Bengal and Chota Nagpur.

Monday, February 5th.—Pressure had been steady or had changed by only small amounts. It had risen slightly in Rajputana and had fallen slightly in Lower Sind, Gujarat, the Central Provinces and Bombay. The shallow depression in North Bengal had filled up. There had been no rain. Temperature had fallen rapidly in the Punjab, the North-Western Provinces and Gujarat. Mean temperature was in defect in the Punjab and Sind and in excess in other provinces, the excess being from 5° to 6° in the Central Provinces, Berar, Chota Nagpur, Burma and Bengal.

Tuesday, February 6th.—Pressure had fallen briskly to rapidly in Baluchistan, the Punjab, Sind and West Rajputana and had risen slightly to briskly in Assam and Burma. The barometer had fallen rapidly in Persia, and a depression in South Persia had given light snow at Teheran and heavy rain at Bushire. Light showers had been received at Tavoy and Quetta and a few drops of rain at Chaman. Mean temperature was in defect in the Punjab, the North-Western Provinces and Rajputana, and normal in Bihar, Sind and Central India. The excess in the remaining provinces was largest in Burma, Orissa, Bihar, the Deccan and Mysore.

Wednesday, February 7th.—The barometer had fallen briskly in Baluchistan and slightly to briskly in Sind and Rajputana. It had risen briskly along the hills in Northern India. The depression advancing from Persia was in South Baluchistan and Sind, and a shallow low pressure area was lying over Orissa and the north-west angle of the Bay. Very light showers of rain had fallen in Baluchistan. Mean temperature was in moderate to considerable defect in the North-Western Provinces and Bihar; in slight defect in Central India; normal in Assam, Chota Nagpur and the Punjab and in excess elsewhere.

Thursday, February 8th.—Pressure had risen briskly to rapidly in Baluchistan, the Punjab and Sind, had fallen briskly to rapidly in North Kashmir and had been steady or had risen rapidly elsewhere. The depression from Persia was lying over Sind and South Rajputana but had almost filled up. Light snow and rain had fallen in Baluchistan and the North-West Himalayas and light rain in parts of the Punjab, and the Western Submontane districts of the North-Western Provinces. Mean temperature was in excess in all provinces except the Punjab, where it was normal, and Bihar and the North-Western Provinces where it was from 3° to 3½° in defect. The excess in Rajputana and Berar averaged 7° and in Orissa and Sind 5½°.

Friday, February 9th.—Pressure had risen slightly over the Western desert, but in all other parts of the Indian region the barometer had fallen, the fall having been brisk to rapid over the Punjab, the more central parts of the country and Bengal. The shallow depression in South Rajputana had advanced eastwards and a shallow low pressure area was shown over east of the North-Western Provinces. Light snow had fallen in Kashmir and light rain in Persia and Baluchistan. Mean temperature was higher than usual practically every where, but the excess was large only in North Bombay, Rajputana, the west of the North-Western Provinces, the central parts of India and South-West Bengal where it ranged from 6° to 10°.

Saturday, February 10th.—Pressure had given way briskly to rapidly in Baluchistan and North-West India and had changed by small amounts elsewhere. A depression was in course of formation in the Punjab and Upper Sind and a shallow low pressure area was lying over the east of the Central Provinces and Orissa. A few drops of rain had fallen at Quetta, Sambhar and Sibsagar. Day and night temperatures both continued in general excess, the mean temperature ranging from 5° to 7½° above the normal over a large area comprising Bengal, Orissa, Chota Nagpur, the North-Western and Central Provinces, the Punjab, Sindh, Rajputana, Gujarat, Central India, Berar and the Bombay Deccan.

Temperature.—Temperature has been in general excess throughout the week, the excess being most strongly marked on Friday and Saturday. The only provinces in which the mean temperature of the week approached the normal were Bihar, the North-Western Provinces and the Punjab, where the excess ranged from ·5° to ·9°. The largest variations from the normal occurred in Berar (+5°·9), Orissa (+5°·8), the Central Provinces (+5°·3) and the Bombay Deccan (+4°·7).

The following table gives mean temperature variation data of the week:—

PROVINCE.	VARIATION FROM NORMAL OF MEAN TEMPERATURE OF 24 HOURS PRECEDING 8 A.M. OF							Mean variation of week.

South India	+3·9	+3·3	+2·8	+2·3	+4·1	+2·8	+2·8	+3·1
Mean for whole of India	+3·3	+2·9	+1·9	+1·7	+2·9	+3·9	+4·8	+3·1

The mean temperature for the whole of India has been above the normal throughout the week, the largest variation occurring on Sunday (+3°·3), Friday (+3°·9) and Saturday (+4°·8). For the whole week the excess has averaged 3°·1.

Rain.—Showers have been received during the week in East and Central Bengal, the Brahmaputra Valley, Orissa, the West Submontane and Hills divisions of the North-Western Provinces, in all the divisions of the Punjab, in Sind and the Baluchistan Hills, but the rainfall received was in all cases in defect of the normal quantity, except in the Baluchistan Hills where it was in slight excess.

The last three columns of the table at the end shew that the rainfall of the period, December 31st to February 10th, was practically normal or in excess in Central Bengal, Chota Nagpur, Bihar, the North-Western Provinces, the Submontane, Hills and North divisions of the Punjab, the Baluchistan Hills, the Central and East divisions of the Central Provinces, Central India (East), Malabar, Mysore and South Central Madras.

The following gives the largest amounts received at individual stations during the week. The amounts are all small, none of them being equal to even one inch.

	Inch.
Assam—Dibrugarh	·78
Punjab—Hangu (Kohat)	·70
Baluchistan Hills—Quetta	·63

W. A. BION,
for Meteorological Reporter to the Government of India.

SIMLA, *15th February, 1900.*

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 17th February.*—No rain has fallen. Water supplies are diminishing and are generally deficient. Where not protected by irrigation, the standing crops are deteriorating. The harvesting continues and the yield is an indifferent one. Pasturage is scanty everywhere but fodder is generally sufficient and the condition of cattle normal. Prices continue almost unaltered. Four test works were opened in Cuddapah and attracted 917 men, 1,551 women, 688 children; total 3,156. Advances were also given for 350 looms employing 864 men and 668 women weavers.

Bombay.—*For week ending 19th February.*—A very slight fall of rain occurred in Hyderabad. The standing spring crops are in good condition in the Konkan and in Shikarpur and in irrigated lands in Baroda, also in four districts of Gujarat and three of the Deccan. Spring crops have withered in parts of Nasik, Ahmednagar, Poona and Dharwar, and have been damaged by frost in parts of Sindh. The reaping of remnants of spring crops is in progress in parts of the Karnatak and the Deccan. The fodder supply is scanty in parts of the Karnatak, Sindh and the Deccan. Cattle are suffering severely owing to insufficiency of fodder in Rajkot and Baroda and in four districts of Gujarat; also in parts of four districts of the Deccan. Prices have fallen in one district, have risen in eight, and are stationary elsewhere.

The daily average numbers on relief are as follows:—British districts.—On test works, 32,204; on relief works, 769,860; dependants, 222 147; total on works, 1,024,211. In poor-houses, 16,048; on village relief, 56.472; totalon gratuitous relief, 72,520. Native States:—On relief works, 318,112; dependants, 45,773; total on works, 363,885. In poor-houses, 26,481; on village relief, 6,964; total on gratuitous relief, 33,445. Grand total on relief, 1,494,061.

Bengal.—*For week ending 19th February.*—There was rain during the week over a considerable area of Bengal proper and in some portions of Orissa and Chota Nagpur. The rain has been useful for ploughing, which is being carried on in some parts. The reports of the spring crops are generally good. The early spring crops are being gathered and the lancing of poppy has begun. The pressing of sugarcane is being pushed on vigorously. In Ranchi the prospects of the mango and *mahua* crops are so far good. The price of common rice has fallen in nine districts and risen in five; elsewhere it is practically stationary. Fodder is generally sufficient and cattle are in good condition.

North-Western Provinces and Oudh.—*For week ending 21st February:*—The rainfall of the week was very slight and was confined to the Himalayan, western submontane and Upper Doab districts, Garhwal having received about an inch and Dehra Dun about three-fourths of an inch. The standing spring crops are generally reported to be in good condition and some of the early crops are being gathered. Ploughing and sowings of extra spring crops continue, and ploughing for certain autumn crops has begun in places. Poppy crops are generally thriving and are being watered and weeded. Extraction of opium has begun in one or two districts. Some spring crops have been slightly damaged by frost in Jalaun. Supplies and fodder are available, but the price of the latter continues high in four districts. Prices are generally stationary or have fallen slightly, but have risen in three districts. There were 3 114 persons on four relief works in the Jhansi district and 443 persons on gratuitous relief; the number of persons in poor-houses was:—Jhansi, 102; Mahroni, 11; Agra, 9 (of whom two were immigrants); Muttra, 194.

Punjab.—*For week ending 21st February.*—Rain is reported to have fallen in all districts except Hissar, Rohtak, Gurgaon and Delhi. A slight fall has also occurred in Amritsar and Bannu. Standing crops are being irri-

gated from artificial sources. Sowings of extra spring crops and ploughings for sugarcane and cotton crops are in progress. Owing to the recent rainfall, late spring sowings have commenced in Dera Ismail Khan. The standing irrigated crops are reported to be in good to fair condition in Hissar, Rohtak, Karnal, Ferozepore, Amritsar, Gujrat, Shahpur and Peshawar and from average to below average in Gurgaon, Delhi, Mooltan, and Rawalpindi. The condition of crops irrigated by brackish wells in Rohtak and Gurgaon and those sown late in Shahpur is not favourable. The recent rainfall has benefited the standing crops and improved their condition in Sialkot and Dera Ismail Khan. Unirrigated crops have totally failed in Delhi. More rain is urgently wanted in Delhi, Lahore, Sialkot, Gujrat and Shahpur. The water supply in the Kalapani stream in Dera Ismail Khan is increasing The outturn of *gur* is reported to be below average in Sialkot. Gram, barley and rapeseed crops are being damaged by caterpillars in parts of Ferozepore. Cattle are said to be in fair condition in Karnal, Amballa and Peshawar. In other districts their condition is generally poor. They are dying of hunger and overwork in Rohtak, Lahore, Gujrat, Shahpur and Jhelum. Fodder is generally scarce and the scarcity is keenly felt by the public. It is sufficient for local requirements in parts of Peshawar. Leaves and branches of trees, reeds, etc., are generally used as fodder. Prices of wheat are generally tending to fall on account of recent rains; the price is still rising in Dera Ismail Khan and is unchanged in Rohtak, Delhi, Karnal, Gujrat and Rawalpindi. The prices of other food grains are unsettled. Wheat is selling from $10\frac{7}{16}$ to $12\frac{3}{4}$; gram, 11 to $13\frac{3}{4}$; barley, 12 to 14; great millet, $10\frac{3}{4}$ to 14; bulrush millet, $9\frac{3}{4}$ to 12; and maize, $11\frac{1}{2}$ to $13\frac{9}{16}$ seers per rupee. Rice is being sold at 9 to 10 seers per rupee in Sialkot.

The average number on relief was as follows:—In British districts—Relief workers, 113,978; dependants 38,961; test workers, 29,467. In poor-houses, 4,136; otherwise relieved, 20,455. Total on relief, 206,997. Native States—Relief workers, 1,337; gratuitously relieved, 2,060; total, 3,397 The test work opened in Umballa has been temporarily closed and a new work opened in the Naraingarh tahsil. The works opened in this district did not attract any labourers. No report about relief workers has been received from two works in Karnal.

Burma.—*For week ending 17th February.*—In Lower Burma the reaping of paddy has been completed. Threshing and winnowing are nearly completed in five districts and have been completed elsewhere. The outturn of crops is expected to be good. In Upper Burma the reaping of paddy is practically finished everywhere. The reaping of *juar* has been completed except in two districts. The ploughing of land for sowing and transplanting of dry weather paddy has commenced generally. The cultivation of inland crops is practically over. Hail has done slight damage in the Mitkyana district. The standing crops are otherwise good. The price of paddy has risen slightly in three and considerably in one district and has fallen in Pegu and Thayetmyo.

Central Provinces.—*For week ending 20th February.*—The weather is clear; nights and mornings are cool and the days warm. Harvesting of spring crops is in progress everywhere. In Saugor the outturns are very varied but generally fair in the south and poor in the north of the district. Preparation of land for autumn sowings continues in Mandla and Nagpur. The pressing of sugarcane continues in Betul. Water-supply and fodder are generally inadequate. Prices are steady in the Chhatisgarh districts and in Jubbulpore, Mandla, Narsinghpur and Nagpur; there are local fluctuations elsewhere. The new harvest is having no appreciable effect on prices, but gram appears to be slightly cheaper in consequence. The cheapest prices are wheat, 12; gram, 15; rice, $11\frac{7}{8}$; and *juar*, 12 seers per rupee. The dearest prices are:—wheat, 8; gram, $9\frac{1}{2}$; rice, 8; and *juar*, 9 seers per rupee. Harvesting operations continue to draw labourers off relief works in Saugor and Seoni and in the districts of the Nerbudda division; but in the districts of the Nagpur division, except Balaghat, and in Raipur and Bilaspur, the numbers have increased and all over the province there is a net increase of 9,452.

There are 144 Public Works Department relief camps now open. The numbers on relief at the end of the week were as follows:—Relief workers:—Public Works Department—adults, 574,481; children, 89,390; village works, 281,165; gra[illegible]ting works, 28,557; weaver relief, 23,589; total, 997,182.

Gratuitous relief :—Dependants—adults, 4,001 ; children, 110,143 ; poor-houses —adults, 234; children, 111 ; kitchens—adults, 20,251 ; children, 165,272 ; otherwise relieved—adults 98,006 ; children, 22,683. Total on gratuitous relief 420,701. Total on all forms of relief, 1,417,883. Feudatory States.—Relief workers, 9,471 ; gratuitous relief, 9,364 ; total 18,835 ; but information is only available from eight States.

Assam.—*For week ending 20th February.*—Slight rain has fallen in all districts except Darrang. Land is being prepared for early rice in parts of the Assam Valley and for lowland rice in Sylhet. The pruning of tea, the pressing of sugarcane and the gathering of mustard and pulses are in progress. The prospects of mustard are generally good. The prospects of sugarcane are good in Sylhet and Lakhimpur and elsewhere indifferent. Fodder is scarce in the Khasi and Jaintia Hills. Prices are :—Common rice, Silchar, 16 to 17 ; Sylhet, 18 ; Dhubri and Tezpur, 16 ; Gauhati, 18 ; Nowgong, 20 ; Sibsagar, 13 ; and Dibrugarh, 12 seers per rupee.

Mysore and Coorg.—*For week ending 20th February.*—MYSORE : The standing crops are withering in parts for want of rain. Prices have risen slightly in Bangalore, Tumkur and Shimoga. Ragi has been harvested in parts of Bangalore and Kadur. Water and fodder are reported to be scarce in parts of Bangalore, Hassan, Tumkur, Chitaldrug and Shimoga.

COORG : The harvesting of rice is almost finished. Prices of food-grains are rising. Water and fodder for cattle are sufficient.

Berar and Hyderabad.—*For week ending 17th February.*—BERAR : The weather is warm during the day and cool at night. The winter crops on well-irrigated lands are in fair condition. Harvesting has commenced in the Melghat taluq and ploughing operations are in progress in four taluqs. Fodder and water are insufficient. Prices :—Akola, 9½ ; Amraoti, 10¼ ; Ellichpur, 9 ; Wun, 11 seers per rupee. The number of persons employed on relief works was 264,917 ; dependants, 34,776 ; occupants of poor-houses, 3,631 ; in receipt of village doles, 5,115 ; total, 308,439.

HYDERABAD : *For week ending 17th February.*—No rain fell during the week. The total rainfall from 1st January is 13 cents. The harvesting of autumn crops is progressing. The winter rice crop sown under wells is suffering in parts for want of water. The condition of cattle is deteriorating. Distress is deepening in the Aurangabad division. Prices :—Wheat, 5⅞ ; coarse rice, 6⅛ ; and juar 9¾ seers per current sicca rupee. Total number of persons on relief works including dependants, 106,227 ; and gratuitously relieved, 7756.

Central India.—*For week ending 21st February.*—No rain fell during the week. Agricultural operations are in progress. There is no change in the condition of standing crops, agricultural stock and pasturage since last report. Prices are steady in Gwalior and Baghelkhand ; high in Bhopal ; above normal in Bundelkhand, rising in Malwa and, fluctuating in Indore. The prices of staple food grains are 12 seers per rupee in Gwalior ; 9 to 12 in Bhopal ; 11¾ to 14¼ in Bundelkhand ; 11 to 14 in Baghelkhand ; 9 to 10½ in Malwa ; 8 to 9 in Bhopawar ; 7 to 9 in Indore. Number on relief works :—Gwalior, 2,173 ; Bhopal, 20,426 ; Bundelkhand, 1,581 ; Baghelkhand, 23,042 ; Malwa, 11,920 ; Bhopawar, 53,741 ; Indore, 6,054. On test works :—Gwalior, 166. On gratuitous relief :—Gwalior, 104 ; Bhopal, 662 ; Bundelkhand, 1,262 ; Baghelkhand, 312 ; Malwa, 3,794 ; Bhopawar, 4,790 ; Indore, 6,018.

Baroda.—*For week ending 10th February.*—There is no change in agricultural prospects. The condition of agricultural stock also remains unchanged. Prices :—bajri, 16 ; *juar*, 19 ; wheat, 16 ; rice superior, 12 ; inferior, 18 pounds of 40 tolas, per British rupee. The average number of persons employed on relief works in Baroda territory was 48,902 ; and the number on gratuitous relief 13,764.

Rajputana.—*For week ending 14th February.*—No rain has fallen. The condition of standing crops and cattle remains unchanged. Prices are rising in three States and falling in six. Prices :—Sirohi, 8 ; Marwar, 8¾ ; Mewar, 8 1/16 ;

Jhalawar, $9\frac{1}{8}$; Kotah, $8\frac{5}{16}$; Tonk, $8\frac{9}{16}$; Bundi, $8\frac{9}{16}$; Ajmer, $9\frac{7}{8}$; Beawar, $10\frac{3}{4}$; Jaipur, 14; Kishengarh, $10\frac{3}{4}$; Bharatpur, $12\frac{5}{16}$; Alwar, 11; Bikaner, $8\frac{1}{2}$; Jaisalmer, $8\frac{1}{2}$ seers per rupee. The numbers employed on relief works were as follows:—Sirohi, 3,493; Marwar, 92,177; Mewar, 76,231; Jhalawar, 2,288; Kotah, 15,829; Tonk, 4,930; Bundi, 4,900; Shahpura, 2,432; Ajmer, 29,773; Merwara, 63,038; Jaipur, 39,020; Kishengarh, 5,542; Bharatpur, 11,567; Alwar, 7,320; Bikaner, 35,626; Jaisalmer, 1,370. On gratuitous relief:—Sirohi, 593; Marwar, 23,388; Mewar, 13,950; Jhalawar, 1,798; Kotah, 2,393; Tonk, 1,332; Bundi, 330; Shahpura, 868; Ajmer, 4,188; Merwara, 15,539; Jaipur, 20,043; Kishengarh, 2,770; Bharatpur, 577; Alwar, 1,395; Bikaner, 963; Jaisalmer, 144. Besides these, 517 persons in Bharatpur, 220 in Ajmer, and 9,002 in Merwar are returned as relieved by private charity. Total on relief works, 395,536; and on gratuitous and charitable relief, 100,130.

Kashmir.—*For week ending 20th February.*—The weather is clear. Prices continue below normal. The price of rice is 27 seers the rupee.

JAMMU.—*For week ending 21st February.*—No rain has fallen. Prices are stationary. Wheat is selling from $9\frac{1}{4}$ to 16, and maize from 12 to 20 seers per rupee. The condition of the standing crops is fair. There is sufficient green grass, but fodder is scarce.

Nepal.—*For week ending 17th February.*—The weather is cloudy. The prospects of the wheat crop are good. The price of rice is $8\frac{1}{2}$ seers per rupee.

The number of persons in receipt of relief during the preceding and present weeks in each Province is shown in the following table:—

* The figures exhibited in the statement appended to the report published on 17th February were incomplete.

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from returns obtained from Local Governments and Political Officers, and give the District details of the Provincial totals published weekly in the Crop and Weather Summary of the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons gratuitously relieved in poor-houses or at their homes.

The dates at the head of the table are the dates of the *Gazette of India* in which the Provincial totals were published. The figures, however, actually show the numbers on relief in each preceding week.

T. W. HOLDERNESS,

Secretary to the Government of India

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.
RAILWAY STATISTICS.

STATEMENT OF APPROXIMATE GROSS EARNINGS OF INDIAN RAILWAYS FROM 1ST JANUARY TO 11TH FEBRUARY 1899, AND FROM 1ST JANUARY TO 10TH FEBRUARY 1900.

N.B.—As regards the figures in column *Total earnings from 1st January 1900*, audited figures have been used, as far as possible.

Railway.	Average earnings per mile per week during the 1st half of 1899.	Week ending 11th February 1899. Mean mileage worked.	Week ending 11th February 1899. Earnings. Total.	Week ending 11th February 1899. Earnings. Per mile open.	Week ending 10th February 1900. Mean mileage worked.	Week ending 10th February 1900. Earnings. Total.	Week ending 10th February 1900. Earnings. Per mile open.	Earnings from 1st January to 11th February 1899.	Earnings from 1st January to 10th February 1900.	Increase.	Decrease.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

MR. HAFFKINE'S SYSTEM OF ANTI-PLAGUE INOCULATION.

Nos. 462—477.

Extract from the Proceedings of the Government of India in the Home Department ($\frac{Sanitary}{Plague}$),*—under date Calcutta, the 22nd February 1900.*

READ—

(1) Home Department Resolution No. 4360 - 74, dated the 11th November 1898.

(2) The Report of the Indian Plague Commission on Mr. Haffkine's Anti-Plague Inoculation.

RESOLUTION.

THE complete report of the Commission appointed by the Government of India, with the approval of Her Majesty's Secretary of State in November 1898, to make a scientific inquiry into various questions connected with the epidemic of plague in India, is not yet ready for publication, but the Government of India have received that portion of it which deals with Mr. Haffkine's system of anti-plague inoculation, and it is now published for general information.

2. The report summarizes a searching inquiry into the composition and preparation of the vaccine, the possibility of effecting improvement in the method of preparing it, the physiological results of inoculation, its preventive and curative effect, the attitude of the people towards it, and its place in the administration of plague preventive measures. The examination by the Commission of the materials which came before them is of a very minute and detailed character. It would not be of advantage for the Governor General in Council to recapitulate the arguments and conclusions of the Commissioners, but some broad facts emerge therefrom to which His Excellency in Council thinks it desirable to draw the attention of the public.

3. The Commission observe that the essential points in an anti-plague vaccine are, firstly, that it shall be capable of preventing and favourably modifying attacks of plague; secondly, that it shall be capable of conferring an effect which will last some time; and, thirdly, that it shall be capable of producing these good results without entailing any evil consequences.

4. The Governor General in Council thinks it desirable to refer to the last point first. The investigations of the Commission make it clear that fear of injury or disease from the use of Mr. Haffkine's vaccine need not be entertained. After careful inquiries in the various centres where anti-plague vaccinations have been performed, the Commission found the statement that serious ill consequences have resulted from them to be unsupported by any evidence. A fear of inoculation has been produced at some places owing to persons who before being inoculated appeared to be quite healthy having died suddenly in a few hours after inoculation. The Governor General in Council thinks it important to draw public attention to the opinion which the Commissioners have expressed as to these cases. "We have come to the conclusion," they remark, "that these cases are not to be imputed to any defect in the anti-plague vaccine. In addition to the fact that they have been quite isolated occurrences, there is the fact that no such cases of death have been reported to us as having occurred in two or more persons who were inoculated with the same vaccine. These cases of sudden death have always occurred at a time when plague cases were actually occurring, while they have not occurred in the absence of a plague epidemic. We are, therefore, of opinion that such sudden deaths are probably imputable to the fact of the inoculation having been made into a person who had already contracted the infection of plague." There is thus no ground whatever for asserting that death has resulted from inoculation

against plague. The Commissioners also observe: "In the overwhelming majority of cases no evidence was adduced to show that any injurious effects had supervened upon inoculation." In a few isolated cases, indeed, abscesses had occurred at the seat of injection, but it is not certain that these abscesses were imputable to the condition of the vaccinating material. There have also been in some instances long-continued reaction at the seat of inoculation and considerable fever. But the cases in which these results have been observed have not been numerous, and the Government of India think that it can safely be said that a person in good health may subject himself to inoculation without any fear of the consequences.

5. The greater portion of the report is occupied with the discussion of the evidence regarding the extent to which the preventive and curative effects of the vaccine have in practice been established. The Commissioners found it necessary to discard the data which were placed before them regarding the inoculation of certain groups of persons. They have expressed in the two tables printed in paragraphs 68 and 70 of their *ad interim* report the statistical results of their inquiry as deduced from the data which they considered to be suitable for the purposes of comparison. The first table relates to the effect of inoculation in preventing, and the second to its effect in modifying, an attack of plague. These tables, they observe, "show that in every case, except that of Bulsar, inoculations had a considerable effect in warding off plague attacks from the inoculated, and that in every case without exception they rendered attacks among the inoculated less fatal than attacks among the uninoculated."

6. The Commission have summarized the results of their critical study of the nature and effect of Mr. Haffkine's vaccine in the following terms :—

"I. Inoculation sensibly diminishes the incidence of plague attacks on the inoculated population, but the protection which is afforded against attacks is not absolute. On the one hand, plague has attacked persons who have undergone inoculation as many as four times in the course of two years previous to their attack. On the other hand, as many as 8 per cent. of the inoculated population may suffer from plague, as was the case in Bulsar. Many varying influences have been at work in determining the rate of attack in different places, and it is impossible to give a numerical expression for the measure of protection against attack which inoculation confers.

"II. Inoculation diminishes the death-rate among the inoculated population. This is due not only to the fact that the rate of attack is diminished, but also to the fact that the fatality of attacks is diminished. Here, again, no numerical expression for the amount by which the death-rate is diminished can be given.

"III. Inoculation does not appear to confer any great degree of protection within the first few days after the inoculation has been performed. This fact, we may note in passing, has an important bearing on the risk of infection which would be incurred by recently inoculated persons if they were left behind in surroundings so plague-infected as to render their evacuation by the uninoculated desirable.

"IV. Inoculation confers a protection which certainly lasts for some considerable number of weeks. It is possible that the protection lasts for a considerable number of months. The maximum duration of protection can only be determined by further observation.

"V. The varying strength of the vaccine employed has apparently had a great effect upon the results which have been obtained from inoculation. There appears to be a definite quantum of vaccinating material which gives the maximum amount of protection; and provided that this quantum can be injected in one dose, and provided also that the protection turns out to be a lasting one, re-inoculation might with advantage be dispensed with. The best results of inoculation will only be obtained after an accurate method of standardization has been devised."

The Government of India therefore regard it as established that inoculation sensibly lessens the liability to plague, and greatly increases the chance of recovery from an attack of the disease.

7. The Commission have drawn attention to several important matters in connection with possible improvements in the preparation of the vaccine. The question of the proper standardization of the dose appears to the Government of India to be very important. The normal dose is 2½ cubic centimetres, but the average dose injected has been 7¼ cubic centimetres, and the dose has been at times as high as 20 cubic centimetres. It is very desirable that the dose should be reduced both because with a smaller dose the work of inoculation will become much less laborious, and also because the reduction in its volume will diminish the inconvenience to the person inoculated. It is also, the Government of India think, essential that there should be no possibility of the vaccine becoming contaminated either in the laboratory or after it has been distributed for use. The appended report by Major Bannerman, dated the 18th July 1899, gives an account of improvements carried out in order to protect the vaccine from contamination. The precautions now taken render it very unlikely that the vaccine will be contaminated in the laboratory, but the adoption of the suggestion made by the Commission that it should be resterilized at a temperature of 60° C. after it has been sealed up in the bottle would give still greater security. This question and that of the standardization of the dose are the most important matters which have to be dealt with in the Plague Laboratory at Parel. In order to prevent the possibility of the contamination of vaccine while in use, instructions should be issued to all persons employed on inoculation that, after a bottle has been opened and only a portion of its contents actually used, the remainder should be invariably thrown away. Another point on which His Excellency in Council desires to lay special stress is that the actual operation of inoculation should only be entrusted to trained and reliable persons, and that supervision should be exercised over them to ensure that they use sterilized implements. The Commission suggest that, with a view to remove any possible ground for distrust as to the conveyance of disease by inoculation from one person to another, the syringe should be sterilized in the presence of the person about to be inoculated. The suggestion commends itself to the Government of India, and it appears to them desirable that all persons employed in performing inoculations should be provided with a spirit lamp for sterilization by holding the needle of the syringe in the flame. In one important matter a discovery has been made since the Commission made their inquiries. Major Bannerman, I.M.S., has recently succeeded in preparing an effective anti-plague vaccine by growing the bacilli of plague in a medium manufactured from wheat, thus avoiding the use of any other than purely vegetable substances. A letter describing the experiments is appended to this Resolution.

8. In summing up the attitude of the people towards inoculation the Commission state that hitherto the principal motive which has induced individuals to come forward to be inoculated has been the desire to obtain exemption from the inconveniences of the plague measures ordinarily applied, rather than that of protecting themselves against an attack of plague. They express the hope that, when the beneficial effects of inoculation are more widely known, native opinion may be won over to its favour, and they allude to the valuable assistance towards bringing about this more satisfactory state of affairs which can be rendered by influential persons among the native communities. With regard to the possibility of adopting a general policy of inoculation, the conclusions of the Commission are as follows:—

"(1) Experience gained hitherto has shown that it is very seldom possible to get a large proportion of the inhabitants of an uninfected place inoculated.

"(2) It has been possible, where the inducement of exemption from segregation and eviction has been offered, to get a large proportion of the inhabitants of an infected place inoculated quickly.

"(3) It has been possible in one place, Mysore City, even where no inducement that touched the great mass of the people could be

offered, to get a considerable proportion of the inhabitants of an infected place inoculated quickly.

"(4) It has been possible also to induce a large proportion of particular communities, such as the Khojas of Bombay and Karachi, to be inoculated under the influence of their leaders."

9. The Governor General in Council accepts the opinion of the Commission that inoculation should be encouraged wherever possible, and in particular among disinfecting staffs and the attendants of Plague Hospitals. His Excellency in Council is not without hope, now that the benefits of inoculation have been clearly established by an independent inquiry, that people will be more ready to be inoculated than they have hitherto been. It is, in the opinion of the Governor General in Council, most important to make special efforts to encourage them to be inoculated in places which, either owing to their nearness to plague-infected places or to their having previously suffered from an outbreak of plague, appear to be specially threatened with a visitation of the disease. His Excellency in Council trusts that in places so situated no efforts will be spared to explain to the people the advantage of becoming inoculated before the disease is among them. At the same time, His Excellency in Council adheres strictly to the principle, which he has continuously enjoined, that the choice whether or not they will be inoculated must be left entirely to the people, and that compulsion must on no account be resorted to. An ample supply of the vaccine prepared in the most careful possible manner should be placed within the reach of the inhabitants of plague-infected and plague-threatened localities, and every facility should be afforded to them for becoming inoculated. It is to be hoped that the more enlightened members of the communities will succeed in explaining to their less educated brethren the strong hope of immunity from plague which is afforded by inoculation, and will induce them to accept more freely the protection which it offers.

10. The Governor General in Council has read with pleasure the tribute which the Commission pay to Mr. Haffkine's work in connection with anti-plague inoculation. His Excellency in Council desires to take this opportunity of publicly expressing his appreciation of the energy and enthusiasm with which Mr. Haffkine attacked a most difficult problem, and of cordially acknowledging the valuable service which he has rendered both to the Government and to the people of India.

ORDER.—Ordered, that a copy of this Resolution be forwarded to all Local Governments and Administrations, to the Departments of the Government of India noted in the margin, and to the Sanitary Commissioner with the Government of India for information [* and communication to Mr. Haffkine].

Ordered, also, that the Resolution be published in the *Supplement to the Gazette of India.*

[True Extract.]

J. P. HEWETT,

Secretary to the Government of India.

INDIAN PLAGUE COMMISSION.

CHAPTER IV.

HAFFKINE'S ANTI-PLAGUE INOCULATION.

Preliminary review of preventive inoculation.

1. It will be of advantage, before we deal specifically with the particular question of Mr. Haffkine's Anti-Plague Inoculations, very briefly to review the history of preventive inoculation. We shall, in the course of our survey, see that general principles have gradually established themselves, first in connexion with the question of the application of preventive inoculation in different kinds of diseases, and secondly, in connexion with the question of the procedure which must be adopted to secure the maximum of advantage from such preventive inoculation.

Inoculation against small-pox.

2. The first step in the application of the method of preventive inoculations was taken when the process of inoculation against small-pox was introduced into Western Europe from Turkey in the early part of the last century. In the case of this inoculation, the virus of small-pox was directly transferred from the patient who was suffering from a clinically mild attack of small-pox into the person who was to be protected. This method of inoculation was resorted to in the expectation that the patient who was inoculated in this manner would, like the patient who had suffered from an actual attack of small-pox, be thereafter immune against further attacks of the disease. This particular expectation was fulfilled. On the other hand, experience showed that, as a set-off against the advantages which accrued to the patient, a considerable risk had to be run. Severe, and in some cases fatal, attacks of small-pox not infrequently supervened in the persons who submitted themselves to inoculation.

Principles established.

The principles which can be deduced from the experience of this, the first, system of preventive inoculation are the following :—

I. Given the case that we are dealing with an infective disease of which one attack protects against a subsequent infection, it is possible to protect against that disease by inoculating some of the virus derived from a sick patient into a previously unprotected person.

II. Given that the virus which is inoculated is not sufficiently attenuated, the evils which result from such preventive inoculation may, in some cases, exceed the benefits which will be derived.

Inoculation with cow-pox lymph.

3. The first system of preventive inoculation, in which a duly attenuated virus was used, was the system of preventive inoculation with cow-pox lymph, which was introduced by Jenner. In this case, the virus which is inoculated is, as subsequent researches have shown, the *materies morbi* of small-pox, which has undergone a constant and adequate degree of attenuation in the course of its passage through a series of calves. From the experience of the favourable results which have been obtained by this system of preventive inoculation, the following principle can be deduced :—

III. Given that the virus of a particular disease can be obtained in nature in a constant and sufficient degree of attenuation, that virus may be employed as a vaccine.

Pasteur's researches on anthrax.

4. The next great practical advance, in the matter of preventive inoculation, was taken when Pasteur demonstrated that, in default of a naturally attenuated virus, it was possible by artificial means to obtain the attenuated viruses which are required. Pasteur showed in the case of anthrax that it was possible to attenuate the virus to any desired degree. Further, he showed how the degree of attenua-

tion could be accurately measured on animals. Lastly, Pasteur showed that it was possible, by employing measured quantities of such duly attenuated cultures, successfully to vaccinate animals against anthrax.

The principle which was thus established may be formulated as follows :—

IV. Given that we have at disposal in nature only a virus whose virulence is such that its inoculation would entail risks too formidable to be faced, still, if it is practicable artificially to attenuate that virus, the attenuated virus may then be used without risks as a vaccine.

With the establishment of this principle, finality would appear to have been reached in the matter of the *essential* requisites of those living vaccines which Pasteur had in view.

Purity of vaccine an essential condition.

5. In order that we may have an ideal vaccine material, we need only stipulate in addition, first, that the menstruum in which the actual vaccine material is contained shall be quite free from bacterial contamination, and secondly, that such menstruum shall, as far as possible, be free from any toxic substance which is not operative in the direction of producing immunity.

Ferran's inoculation against cholera with living cultures.

6. Having placed these theoretical requisites clearly before us, we may consider the next extension which was made in the matter of the application of preventive inoculation to man. This step was taken in Spain in the presence of the cholera epidemic, which devastated certain regions of that country in 1885. This step consisted in the application of the principle of preventive inoculation to the protection of the population against this disease The anti-cholera inoculations which are in question were introduced by Dr. Ferran. The method of operation consisted in the inoculation of living cholera cultures. These inoculations were very widely applied. An inquiry into them was instituted by a Commission appointed by the French Academy of Medicine. The scope of this inquiry embraced : (*a*) the methods which were employed in the manufacture of the vaccine, and (*b*) the results which were obtained by the inoculation.

Comptes Rendus de l'Académie des Sciences, 1866.

It appears from the Report of the French Commission, that Dr. Ferran refused to reveal the details of the methods which he employed in the preparation of his vaccine. The vaccine appears to have been manufactured by growing the cholera bacillus in nutrient broth. The methods which were employed in making these cultures are described as having been crude in the extreme. It would appear that no method of standardizing the strength of the culture, and no process of controlling the purity of his culture, was adopted by Dr. Ferran.

The members of the French Commission saw a considerable number of persons inoculated with Dr. Ferran's vaccine. They examined these patients after inoculation, and they reported that they did not observe, and that they had not learned of, the occurrence of any evil symptoms beyond the fever and the malaise and local pain, which are the necessary accompaniment of such inoculations. Dr. Ferran's statistics were not controlled by the French Commission. The Commissioners, however, state that they learned incidentally from a fellow passenger in the train that these statistics were probably untrustworthy, inasmuch as there was a considerable concealment of deaths in the cholera districts, and inasmuch as the population of Spanish towns was habitually understated by the Municipalities, with a view to evading the poll tax.

General deductions from Ferran's inoculations.

7. These inoculations of Dr. Ferran have an interest, inasmuch as they represent the first extension of the principle of preventive inoculation to the protection of man from diseases other than small-pox. The principles which underlie these inoculations may be formulated in the following way :—

V. Given that we are dealing with a disease, such as cholera, which does not itself confer any long-lasting immunity against a subsequent attack, it is still an object to be aimed at to obtain, by a vaccination process, the short-lived immunity which accrues to a patient who has survived an actual attack of the disease.

VI. In a disease, such as cholera, which is caused by micro-organisms, which have no power of proliferating themselves in the blood or tissues of man, the vaccine material which is hypodermically inoculated may legitimately consist of unattenuated living cultures of such micro-organisms.

From the results of Dr. Ferran's inoculations, so far as they are available to us, we may glean also the following facts for our guidance :—

(a) Even in the absence of all scientific precautions for controlling the purity and the virulence of the cultures which are employed, the evil effects which might have been anticipated do not necessarily supervene.

(b) No certain judgment can be arrived at with regard to the efficacy of an inoculation process when the statistics are liable to be extensively vitiated, on the one hand, by insufficient reporting and the concealment of cases, and, on the other hand, by false estimates of the numbers of the non-inoculated population. Both these factors are said to have vitiated the statistics of the anti-cholera inoculation in Spain : we shall find them detracting from the value of many of the statistics of anti-plague inoculation which were placed before us in India.

Pasteur's work on rabies.

8. Almost contemporaneous with Dr. Ferran's work in connexion with the cholera inoculation, is the brilliant original work which Pasteur did in connexion with the elaboration of a method of protective inoculation against hydrophobia. The details of Pasteur's process, and the new principle which can be deduced from it with regard to the possibility of inoculating successfully during the incubation period, do not immediately here concern us. The question of successful inoculation during the incubation period, so far as it has an application to the case of plague, will be dealt with later. Suffice it for our purpose that Pasteur's work in connexion with rabies provides us with a further instance of a possibility of conferring protection against an invariably fatal disease by the employment of a duly-standardized living vaccine.

Haffkine's inoculation against cholera with measured quantities of living bacteria of known virulence.

9. The next advance in the history of preventive inoculation is marked by the fact that Mr. Haffkine, who was inspired by the principles of Pasteur, took up the anti-cholera work which had been inaugurated by Dr. Ferran. Mr. Haffkine laid down for himself as a principle that in the case of the anti-cholera inoculations the Pasteurian prescription of operating with measured quantities of bacteria of accurately known virulence was to be strictly observed. The vaccination-dose of cholera bacilli employed by Mr. Haffkine was the quantity of culture which grew in 24 hours on one-sixth part of the surface of an ordinary agar tube. The virulence of the cholera cultures which were employed for these inoculations was such that the total peritoneal effusion of a guinea-pig, which had been killed by intra-peritoneal injection of cholera, was lethal to another guinea-pig in eight hours.

Duration of immunity against cholera doubtful. "Indian Medical Gazette," No. 1, January, 1895. Report to Government of India, dated August 25th, 1895. "Indian Medical Gazette," Vol. XXX., No. 12, December, 1895.

10. Reports showing favourable results which were obtained from these inoculations have been published, on the one hand by Mr. Haffkine, and on the other hand by Captain Christian Hare, I.M.S. Inasmuch as these favourable results were obtained in persons who were exposed to cholera infection within a very short period after the inoculation, they tell us nothing with regard to the duration of immunity. A painstaking endeavour was made by Mr. Haffkine to collect data upon this subject by investigating the incidence of cholera among inoculated persons who were residing in the bustees of Calcutta, where cholera is endemic. In accordance with the results of these inquiries, the resulting immunity was adjudged to last for over 12 months. In the case of the epidemic of cholera which occurred in the East Lancashire Regiment in Lucknow, 14 months after inoculations had been done in this regiment by Mr. Haffkine, the incidence of the disease showed that such immunity as was conferred by the small quantities of cholera cultures inoculated was hardly noticeable.

11. The next practical extension of the principle of preventive inoculation was made when the anti-typhoid inoculations were introduced. The first of these inoculations were undertaken by one of us in July and August 1896. A little later similar inoculations were undertaken by Pfeiffer and Kolle in Germany. In both cases the immunizing material which was recommended consisted of dead cultures of typhoid bacilli. In view of this fact, it was possible directly to standardize the vaccine by determining the toxicity of a measured volume of the dead culture. It has been determined by comparative experiments on men and animals that the quantity of dead culture which may with safety be inoculated into a man is the quantity of broth culture which is lethal for 100 grammes of guinea-pig.

Inoculation against typhoid, with dead cultures. "Lancet" Sept. 19th 1896, "British Medical Journal," Jan 30th, 1897. "Deutsche medicinische Wochenschrift," Nov. 12th, 1896.

12. Next in chronological order comes preventive inoculation against plague. The first experiments made on this subject were made by Yersin, Calmette, and Borrel conjointly in 1895. These observers found that it was possible to confer a certain amount of immunity against plague by the hypodermic injection of dead cultures of plague bacilli. Their experiments were carried out on rabbits and guinea-pigs.

Haffkine's inoculation against plague and questions to be now considered in connexion with it.

Mr. Haffkine's anti-plague inoculations represent an extension of this system of preventive inoculation to men.

Annales de l'Institut Pasteur, 1895.

We may consider in connexion with Mr. Haffkine's method of inoculation—

I. The method of preparing mass cultures of the plague bacillus.
II. The method of controlling the purity of these cultures.
III. The method of killing the plague bacilli with the view of converting the culture into an immunizing material.
IV. The method of decanting and bottling the prophylactic fluid.
V. The method of ascertaining that the vaccine is free from contaminating micro-organisms, and the precautions which are adopted for preventing the growth of such organisms.
VI. The method of standardizing the vaccine.
VII. The composition of the vaccine.
VIII. The volume of the prescribed dose.

13. In preparing cultures of the plague bacillus on a large scale, Mr. Haffkine had to deal with two difficulties. In the first place he had to exclude from his culture medium all animal products, such as commercial peptone, of which it could not be asserted that they had been prepared in such a manner as to be inoffensive to the feelings of the natives of India. In the second place, Mr. Haffkine had, while cultivating his plague bacillus in mass culture on a liquid substratum, to provide for the efficient aeration of his cultures. Both these difficulties have been overcome.

I.—Method of preparing mass cultures of the plague bacillus.

A suitable culture medium has been obtained by digesting goat's meat in the autoclave at 140° C. with hydrochloric acid; and then neutralizing the acid medium with caustic soda.

Culture medium adopted. 26—7.

The difficulty which is occasioned in the case of any fluid culture medium by the want of proper aeration in the deeper layers is overcome in the case of Mr. Haffkine's mass cultures by the introduction of a small quantity of oil into the medium. The plague bacteria suspend themselves from the oil drops on the surface of the medium.

Method of securing proper aeration. 27.

The culture medium is inoculated with plague bacilli. This done, the inoculated flasks are cultivated at the temperature of the air. When this temperature sinks below 25° C., the air of the room is warmed up by lighting a certain number of gas jets. The flasks are cultivated in this manner for a period which varies from two to six weeks. During the course of the cultivation, the culture is shaken up every few days.

Method of cultivation. 27.

14. At the termination of the cultivation, the purity of the plague culture is controlled by transferring a portion of the contents of the flask with a sterile pipette on to the surface of a dry agar tube. The character of the growth which develops on the dry agar tube is then controlled by naked eye observation. The character by which the purity of the culture is judged is the specular appearance of the colonies, when these are seen from the back by reflected light through the thickness of the agar.

II.—Method of controlling the purity of the plague culture.
17,276.

15. After drawing off a sample of the contents for the purpose of controlling the purity of the culture, the cultivation flasks are placed in a water bath along with a control flask. This last is filled with water, and is fitted with a thermometer. The temperature of the water bath is then raised until the thermometer in the control flask indicates a temperature of 65° C. This temperature is maintained for one hour. An addition is then made to each flask of a quantity of carbolic acid amounting to one two-hundredth part of the bulk of the vaccine.

III.—Method of killing the plague culture and precautions taken to prevent the growth of contaminating micro-organisms in the vaccinating material.
102·4.

16. The decanting and bottling is effected in the following manner. The decanter takes a flask of the dead plague culture and shakes up the sediment which has lodged at the bottom of the flask. He then raises the cotton-wool plug and introduces into the neck of the flask a long glass syphon. There appears then to be some difficulty in starting this syphon. The method which is enjoined involves the fitting on of a mouthpiece to the end of the syphon, and the application of suction. The syphon having been started, the contents are run off into ordinary 4 to 6 oz. narrow-necked and dark-coloured medicine bottles. These are then corked up with corks that have undergone a sterilization process. This done, the necks of the bottles are immersed into a vessel full of melted sealing wax. During the process of decantation, the decanters are instructed to shake up the vaccine material from time to time.

IV.—Method of decanting and bottling.
17,461—6.

17. It was assumed that the sterility of the vaccine was sufficiently insured by the procedure described above until attention had been drawn to this matter shortly after we commenced our inquiry in India. Since December 12th, 1898, the sterility of the culture has been directly controlled by transferring to a tube of agar the first sample of the carbolized vaccine syphoned off from the cultivation flask.

V.—Method of controlling the sterility of vaccine.
17,470—2.
104

VI.—Method of standardizing the vaccine.

18. We had some difficulty in ascertaining what was the method of standardization which was adopted by Mr. Haffkine. We gathered, from Mr. Haffkine's statement when he was first examined before us, that each brew of vaccine was standardized either by Mr. Haffkine himself or by the inoculator by determining what volume of the vaccine would produce an average temperature of 102° F. in a series of ten to twenty patients. Further enquiry, however, revealed that this method of standardization was not systematically employed. On the one hand it was ascertained that Mr. Haffkine was not himself able to carry out this system of standardization in the case of the large bulk of the vaccine which was sent out, and on the other hand we were able to see clearly that the conditions under which the inoculations were done at outlying stations were such that it was not possible for the inoculator to undertake this preliminary task of standardizing his vaccine on a series of patients. Finally, we elicited that the routine practice which was adopted in Mr. Haffkine's laboratory was to standardize the vaccine by holding up to the light one or two sample bottles of each brew, with a view to appreciating the opacity of the vaccinating fluid. It was in conformity with the results of this appreciation that the dose was inscribed on the label of each bottle of the vaccine. The dose was there stated on the labels in multiples of a "standard dose." This "standard dose" was an arbitrary quantity: it was assumed to be the equivalent of $2\frac{1}{2}$ c.c. of the original vaccine with

72, 77, 78, 182.
3023—8.
17,527—46.
4,677.
10,705—6.
33.

which Mr. Haffkine inoculated himself and his first batch of patients. Where, for instance, two or three standard doses were prescribed, it was assumed that the vaccine of which this quantity was prescribed was twice or thrice weaker than the original vaccine.

Factors which in practice acted as checks on the method of standardization adopted.

19. While it appears from the evidence which has been placed before us that the above is the routine practice which was adopted in the standardization of the vaccine, it is to be observed that the results which were obtained by this method were, in some instances, controlled by direct observations of toxicity made on persons who presented themselves for anti-plague inoculation at the inoculation station which was attached to Mr. Haffkine's laboratory. We may also note that Mr. Haffkine throws the ultimate responsibility for the standardization of the vaccine upon the inoculator, inasmuch as he has given it to be understood that each inoculator, before he proceeds to inoculations *en masse*, should make, in the case of a sample of vaccine, a preliminary series of test experiments with the prescribed dose on a batch of some twenty patients.

VII.—Volume of the prescribed dose.

20. The samples of the vaccine which have come under our direct observation have been estimated by Mr. Haffkine to be, respectively, 2, 2½, 3, 4, 5, 6, 7 and 8 times weaker than the standard vaccine. The doses of these vaccines were thus, respectively, 5, 6¼, 7½, 10, 12½, 15, 17½ and 20 c.c. On an average the prescribed dose has perhaps amounted to something like 7½ c.c.

VIII.—Composition of vaccine.

21. The vaccinating material consists of two constituents. By far the larger bulk consists of the nutrient fluid in which the plague bacilli have been grown. Relatively speaking, a very small bulk consists of the dead bodies of the plague bacilli which have been grown in that fluid.

Criticisms of method adopted for preparation of vaccine.

22. Before passing on to make any criticisms of the methods which are adopted in the preparation of the vaccine, we desire to recognise in the fullest manner the enormous difficulties with which Mr. Haffkine had to contend in working under the conditions of an Indian climate, with an incompletely trained staff, in an incompletely equipped laboratory, and under the pressure of great urgency.

(I.) Method of preparing mass cultures.

23. It seems to us that Mr. Haffkine has solved in a skilful manner the problems of finding a suitable culture medium and a suitable method of aerating his mass cultures of the plague bacillus. A somewhat similar method to that which he has employed for suspending the plague bacilli on the surface of the nutrient fluid has frequently been employed in the cultivation of the diphtheria bacillus.

(II.) Method for controlling purity of cultures.

24. Mr. Haffkine's method of controlling the purity of his mass cultures is the routine method which is adopted by all bacteriologists, and calls for no remark. The method of controlling the purity of the cultures of the resulting growths merely by naked eye inspection is, on the other hand, a departure from the usual method which is adopted in such cases. The specular appearance of the colonies of plague bacilli, seen from behind by the reflected light through the depth of the agar, is a characteristic upon which we should scruple to place much reliance. Our experience in this matter is the same as that of Mr. Hankin. Hence we do not think that this method of controlling the purity of a plague culture is one that ought to be generally adopted. We are, however, very far from disputing that the character referred to may, in the hands of a bacteriologist who has the special experience of Mr. Haffkine, constitute a trustworthy index of the purity of the plague culture.

8667.

(III.) Method of killing the plague culture.

25. The method for killing the cultures of plague bacilli, which has been adopted by Mr. Haffkine, is the routine method which is adopted by every bacteriologist. In view of the fact that no surviving plague bacilli have been detected either by ourselves or by others in very numerous samples of vaccine which have been examined bacteriologically, the method of killing the culture which is adopted by Mr. Haffkine appears to us to be, in the case of plague, as in the case of other non-spore bearing organisms, absolutely trustworthy.

Influence of heating on the bacterial sediment and the supernatant fluid respectively.

The only question which has to be considered in connexion with the application of heat for the purpose of killing the plague bacilli is the question as to the influence which the temperature employed may exercise upon the various constituents of the prophylactic fluid. Experiments upon this question have been made by the German Commission and by ourselves.

Report of German Plague Commission, pp. 312—4.

The German Commission found that the efficacy of the immunizing substances which are contained in the bacterial sediment was perfectly well preserved when the bacteria were killed by an exposure to a temperature of 65° C. The protective power of the bacteria which were killed by the application of that temperature was not less than the protective power of an equal bulk of bacteria which had been killed by chloroform. The immunizing powers of the bacterial sediment were, however, practically destroyed when this sediment was subjected to a temperature of 100° C.

26,432.

We, for our part, have tested the effect which is exerted by heat upon the filtrate from a plague culture. These results have been incorporated in Table IV of Dr. Liston's evidence. It results from these experiments that the soluble toxins, which are under certain conditions developed in the fluid nutrient medium in which the plague bacilli are grown, are apparently not affected by exposure to a temperature of even 100° C.

109.

Mr. Haffkine has not made any experiments on this subject.

Effect of addition of ½ per cent. carbolic to the vaccinating material.

Further, in this connexion we may consider the effect which is produced by the addition of carbolic acid to the vaccinating material.

So far as we know, the only experiments which have been made with a view to ascertaining the effect of such an addition, are the experiments on the effect of an addition of ½ per cent. carbolic acid to plague cultures, before and after heating, which were instituted by the German Plague Commission. Two facts were brought out by these experiments. The first of these is that the protective properties of a plague culture which has been killed off by the application of heat are not in any way impaired by the subsequent addition of ½ per cent. carbolic acid. The second of these is the very interesting fact that when ½ per cent. carbolic acid is added to the unheated plague culture, its chemical constituents are so altered that it becomes perfectly useless from the point of view of giving protection.

Pp. 310. 2. Report of German Commission.

120.

Mr. Haffkine has not made any accurate experiments on the effect of the addition of the carbolic acid which he makes to his vaccinating material.

(IV.) Method of decanting and bottling.

26. It is manifest that the procedure of decanting and bottling which has been outlined above, and which is prescribed in detail in the instructions which are incorporated in Appendix No. V in Vol. I of our Proceedings, is a procedure which even a skilful operator could not easily carry out in an absolutely aseptic manner. The chances of contamination must naturally be materially increased when it becomes necessary to commit the task of carrying out these instructions to a subordinate native agency. The particular difficulties which we have noticed are :—

1st.—The difficulty of ensuring the adequate sterilization of the glass syphon.

2nd.—The difficulty of ensuring that the syphon shall be started by the prescribed procedure without contaminating the end of the delivery tube.

3rd.—The difficulty of corking a bottle in an aseptic manner when the cork has to be held and inserted into the neck of the bottle with no other implement than a pair of ordinary dissecting forceps.

Lastly.—The difficulty of sealing a bottle in an airtight manner with a material such as sealing wax, which refuses to adhere to a wet or steamy glass surface.

27. The above criticisms of the methods of the preparation, decanting and bottling of the vaccine acquire importance in view of the fact, which we will now proceed to consider, that the precautions taken did not, in point of fact, secure the freedom of the vaccine from contaminating micro-organisms.

(V.) Method of securing sterility of vaccine.

Evidence bearing upon this question was brought before us first at Dharwar. It was there brought to our notice that, in view of the fact that certain bottles of vaccine had been found to be putrid, it was the practice of the inoculators to smell each bottle of the prophylactic, with a view effectually to exclude such bottles.

Question of the presence of contaminations in the vaccinating material. 1754—7, 1781, 1807—9.

The question of the presence of contaminating micro-organisms in the vaccine was again brought before us at Hyderabad, by Col. Lawrie, I.M.S., and Mr. Mullanah. We found some difficulty in determining who was really responsible for the experiments which were adduced in the support of this assertion, that the vaccine was contaminated. We have, however, in view of the fact that Dr. Lawrie controlled the processes and deductions of Mr. Mullanah, finally arrived at the conclusion that the responsibility for these must rest with Dr. Lawrie. This being so, we are compelled, in view of the want of familiarity with bacteriological methods which was displayed by Dr. Lawrie, to receive the experimental data, which were brought before us, with a certain amount of reserve.

5161, 5379-95, 5674.

In addition to the evidence just referred to, evidence on the subject of the contamination of the vaccine was brought forward both in Hyderabad and afterwards in Bombay by Captain O. A. Johnston, I.M.S. This evidence related to a series of seven bottles of Haffkine's prophylactic fluid which were bacteriologically tested. The samples which were employed for the purpose of testing these bottles were drawn off in the bacteriological laboratory at Hyderabad in the presence of one of us. While we are not able in this particular case to guarantee the absolute asepticity of the procedure which was adopted in transferring the vaccine to the agar tubes, there can be no doubt that the luxuriant growth which was to be seen when these agar tubes were afterwards produced for our inspection could not possibly be accounted for by the minor defects which were noted in the procedure adopted. The bacteria which were obtained by Captain Johnston from one of these samples (Brew No. 5,338) were afterwards inoculated into a rabbit, with fatal results.

5798—821. 24,895—916. Appendix LXX.

Our attention was further directed to the possibly contaminated condition of the vaccine by the evidence which was laid before us at Wardha. The evidence in question showed that constitutional and local symptoms of excessive severity had supervened upon the inoculation of Mr. Hogan and his Assistant Surgeon with Mr. Haffkine's vaccine.

6300-92.

28. In view of the fact that doubt had thus been cast on the efficiency of the procedure adopted by Mr. Haffkine to secure the sterility of his vaccine, a series of samples of anti-plague vaccine were requisitioned from Dharwar, Bangalore, and Hyderabad. Sample bottles were also taken from the stocks which were kept at Nagpur and at Calcutta. Among the bottles which were taken from Nagpur were some samples of the brew of vaccine which, according to the information we have received, was the brew (Brew No. 4,746) employed in the inoculation of Mr. Hogan and his Assistant Surgeon.

Bacteriological examination of samples of Mr. Haffkine's prophylactic at Calcutta and Bombay. 8389.

These various samples of vaccine were submitted to bacteriological examination by Dr. Nield Cook at the Health Office, Calcutta, under the immediate supervision of one of ourselves. The methods which were employed in these examinations, and the details of the results which were obtained, will be found in Dr. Nield Cook's evidence. It will suffice here to note that out of a total of 22 bottles examined, 7 were found to contain bacterial impurities. This total of 22 included 6 bottles which were sent in for examination from Hyderabad. One of these contained impurities. This bottle was derived from the same brew (Brew No. 5,338) which was found by Captain Johnston to contain a bacillus which was fatal to

8380-9.

rabbits. In two of the bottles which were derived from the brew (Brew No. 4.7.'6), which had been employed for the inoculation of Mr. Hogan and his Assistant Surgeon, a number of contaminating bacteria were found. We may note in passing that the number of the brew, as it appears in Dr. Nield Cook's evidence, differs from the number assigned to this brew in the note in which Lieutenant Hammond, I.M.S., who also examined certain samples of vaccine, details the result of his bacteriological observations. In view, however, of the fact that contaminating bacteria were found both by Dr. Nield Cook and by Lieutenant Hammond, and that they appeared on comparison to be morphologically identical, the confusion as to the number of the brew is not of any importance.

A further series of 12 bottles, derived from the stock of vaccine which had accumulated at Mr. Haffkine's laboratory, was tested under our direct supervision at Bombay. Three of these bottles were found to contain contaminating micro-organisms.

26,375.

Lastly, a methodical examination of all the brews of vaccine which were available in the Plague Research Laboratory, Bombay, was made by Captain C. J. Milne, I.M.S., acting under the instructions of Mr. Haffkine. This systematic examination revealed the fact that out of 125 bottles examined 26 contained contaminating micro-organisms.

17,481.

Thus, if we altogether exclude from consideration the evidence which emanated from Dr. Lawrie's laboratory, it is to be noted that the other series of examinations yielded the result that contaminations were present respectively in 7 out of a series of 22, 3 out of a series of 12, and 26 out of a series of 1·5 bottles examined; in other words, contaminations were found in 36 out of 159, *i.e.*, in 22·5 per cent. of bottles examined.

Source of contaminations discovered on bacteriological examination.

17,481.

29. In view of the fact that in Dr. Milne's series of examinations contaminations were found only in 6 out of 104 well-sealed bottles, whereas they were found in 20 out of 21 badly-sealed bottles, Mr. Haffkine has urged that the bacterial contaminations which we have spoken of above are almost all imputable to a defect of sealing in the bottles. We cannot, however, accept Mr. Haffkine's view in its entirety, for even when great precautions were taken to exclude all but well-sealed bottles—and such precautions were taken in the case of the bottles which were examined under our supervision at Calcutta and Bombay—the result showed that contaminations were present in 10 out of 34 of these well-sealed bottles. It seems to us, therefore, that many of the contaminations must have been introduced during the process of decantation.

Precautions for the avoidance of contaminations.

30. The questions which have been considered above, suggest two further questions :—

1. They suggest the question as to whether it would be possible to institute a final bacteriological examination with a view to the detection and exclusion of contaminated bottles.
2. They suggest the question whether, failing the adoption of such a process of bacteriological control, it would be possible to re-sterilize the vaccine after it is finally bottled.

Bacteriological control of sterility before vaccine is sent out not applied at period when most required, and does not detect bacteria not checked in development by presence of carbolic acid.

In connexion with these questions, we have to consider the procedure for controlling the sterility of the vaccine which has been adopted by Mr. Haffkine since December 1898. This procedure consists, as we have seen, in receiving directly on the surface of an agar tube the first portion of the carbolized vaccine which is syphoned off from each cultivation flask. It seems to us that this procedure hardly meets the necessities of the case. The following points suggest themselves to us in this connexion :—

First, the proceeding is one which ensures the control of the vaccine only at that period when it least needs control, *i.e.*, at the period which immediately supervenes upon the process of heating and carbolization. On the other hand, it does not in any way guarantee the sterility of the vaccine at the stage when it most requires control, *i.e.*, at the period when it has been exposed to the risks of contamination which are involved in decanting, bottling, and corking.

A further criticism relates to the method which is adopted of testing the presence of contaminating micro-organisms in the vaccine material. It will have been noticed that the carbolized vaccine is received for testing purposes directly from the syphon upon the surface of the agar, and that it is not subsequently diluted. It seems to us that this method is a method which is calculated to reveal the presence of such bacteria only as are capable of growing in the presence of ½ per cent. of carbolic acid. It may quite well be that these are the contaminations which are most to be dreaded. None the less, it seems to us that it would be better to adopt as a method of testing a method which would favour the development of each and every species of contaminating bacteria. This end might be readily achieved by taking the precaution of diluting the sample of carbolized vaccine which is to be tested, either before or after it is transferred to the surface of the agar tube.

17,302-6.

In response to a suggestion which was made to Dr. Lawrie during his cross-examination before us, experiments on the re-sterilization of the vaccine in bottles, after they had been sealed up, were instituted by Captain C. A. Johnston. So far as these experiments go, we may note that their results are favourable to the conclusion that it would be possible by re-sterilization at a temperature of 60° C. to secure that the vaccine should be sent out in a perfectly aseptic condition, and this apparently without forfeiting anything of its efficacy.

(2) Question of final re-sterilization of the vaccine in bottles. 24,921, 24,926-31.

31. We have seen above that it was laid down as a principle by Pasteur that no vaccination should be undertaken unless with a measured quantity of a culture of definitely ascertained virulence. The above, however, applies only in cases where a living culture is employed as a vaccine. In cases in which dead bacterial cultures are used as vaccine, the standardization of the vaccine resolves itself into a question of determining the toxicity of a measured volume of the culture. This determination may be made by directly testing the toxic effect of the dead culture on men or animals. Failing that, it may be made by determining in two successive operations, first, the virulence of the bacteria which are employed in the manufacture of the vaccine, and secondly, the quantity of effective element which is contained in a given volume of the dead culture.

VI.—Method of standardization.

Two methods of standardization applicable.

32. We have already stated that in some cases Mr. Haffkine's vaccine, was standardized by the direct method of determining the toxic effect that was produced on man by the injection of a measured volume of the vaccine. Further, we have stated that it was contemplated that all of it should be standardized by this method. We may, therefore, consider the question of the standard of toxicity which was adopted. This standard was, as we have already seen, the production of an average temperature of 102° F. on a series of 10 to 20 patients.

Criticism of standardization by temperature reaction.

With regard to this we have to state that we have no data at our disposal for arriving at a judgment as to whether the attainment of that temperature is, in reality, an index of the acquirement of immunity. It seems to us, however, on *à priori* grounds, that the temperature reaction is probably an untrustworthy index of the protection which is afforded, inasmuch as the vaccinating material contains, in addition to the poisons which are specific to the plague bacillus, other fever-producing poisons in the form of considerable quantities of peptone.

Quite apart from the possible fallacies which attach to the particular criterion of efficacy which has been adopted by Mr. Haffkine, there seem to us to be also certain practical difficulties which are incident to this particular method of standardization. In the first place, the temperature reactions which supervene upon the inoculation of precisely similar quantities of one and the same vaccine are notoriously subject to very considerable individual variations. We may refer here to the evidence of Captain C. J. Milne, I.M.S., and the observations of Lieutenant Hammond, I.M.S. Secondly, the acme of the temperature apparently occurs at very

Practical difficulties in adoption of temperature reaction as standard.

17,190—5.
App. XIX.

irregular intervals alter inoculation. Thirdly, it is very difficult to keep the inoculated under close medical observation for the time which is required for determining the ultimate height of the temperature.

Confirmation of the truth of these conclusions was obtained by us as soon as we began to inquire into the question as to how far it had been possible in practice to employ the method of standardization which was prescribed by Mr. Haffkine. We found that in practically every case it had been found impossible to undertake the prescribed series of preliminary test temperatures. In connexion with this, we may remark that, with hardly an exception, the inoculator injected without question the doses of vaccine which were prescribed upon the bottles.

3023—8, 6321—3, 11,702—3, 14,808—10. 14,804-7.

As soon as these facts came to our knowledge, during our tour in the Provinces, we recommended to the Government of India that the inoculator should be relieved from the task of standardization, and that all the operations which were required for the standardization should be carried out in the laboratory before the vaccine was sent out.

33. On our return to Bombay we made further inquiries as to how the dosage which was inscribed on the labels of the bottles was arrived at. Our inquiries revealed, as has already been stated above, that the doses were inscribed on the labels in accordance with the estimates which were formed of the opacity of the particular vaccines when certain sample bottles of these were held up to the light. In view of the fact that this method is not a procedure for directly testing the toxicity of a measured volume of vaccine, but a procedure which is designed to determine the quantity of bacterial sediment which is contained in a particular volume of fluid, it became necessary further to inquire, first, whether a preliminary method of standardizing the virulence of the culture was employed, and, secondly, whether the quantity of bacterial sediment contained in a measured volume of fluid was, as a matter of fact, accurately ascertained by the process which has been described above.

Criticism of standardization by estimation of opacity.

34. The evidence which was laid before us by Dr. Mayr revealed the fact that no systematic method was adopted for ascertaining the virulence of the cultures which were employed for the manufacture of the vaccine. Mr. Haffkine had previously stated that in lieu of adopting a systematic method of testing the virulence of his cultures, an endeavour was made to employ for the manufacture of the vaccine, so far as it was practicable, only microbes which were directly derived from the bodies of patients who had died of plague. No definite data were communicated to us by Mr. Haffkine, but it appears, however, that it was not always possible to employ cultures which were directly obtained from plague patients. In many cases, as we gathered from Dr. Mayr's evidence, the microbes which were employed for the manufacture of the vaccine were microbes which had become attenuated in the course of prolonged cultivation on artificial media.

Question of antecedent estimation of virulence of cultures employed. 17,418—17,425.

35. We need not here, in the absence of sufficient experimental data, discuss the question as to whether protective effects can be obtained by the inoculation of non-virulent cultures. We may merely note that the German Plague Commission endeavoured to put this question to the test by experiments on two monkeys. Contrary to what had been found to be the case when sterilised cultures of virulent plague were employed, it was found that the sterilised cultures of non-virulent plague in similar quantities conferred no protection. The German Plague Commission based upon these experiments the conclusion: "That it is absolutely essential that the plague cultures which are employed in protective inoculation should be obtained directly from fatal cases of plague, and, failing that, they should be cultures which have been kept up to the necessary degree of virulence by a continuous series of passages through animals." The evidence for this conclusion does not seem to us to be absolutely cogent, inasmuch as evidence has not been brought forward by the German Commission to show that the quantity of bacteria on an agar culture

Doubt whether inoculation with attenuated plague cultures confers protection.

Report of German Plague Commission, p. 314.

of non-virulent plague is as great as the quantity which is contained on an agar tube of virulent plague. None the less until it shall have been established that protection can be afforded by vaccines made from non-virulent cultures, it seems to us that it would be desirable to adopt some method of keeping up the virulence of the plague cultures which are employed for the manufacture of the vaccine. The results of the experiments which are recorded in the evidence of Lieutenant Liston, I.M.S., seem to us to indicate that it would be a comparatively easy matter to keep up the virulence of a plague culture by a series of passages through guinea-pigs.

26,431c.

Criticism of method adopted by Mr. Haffkine for determining quantity of bacterial sediment in given volume of vaccine.

36. From this we may pass on to the consideration of the method which is employed by Mr. Haffkine for determining the quantity of bacterial sediment which is contained in a given volume of the vaccinating fluid. It was obviously important to determine whether the method which was adopted was a method which gave approximately accurate results. This question is one which it seems to us must be kept rigorously apart from the question of the virulence of the particular cultures which are employed. For although it is possible that an error committed in the determination of the quantity of bacteria in a given bottle of vaccine might, in some cases, be counterbalanced by the fact that the virulence of the culture had, in a particular case, been over or under-estimated, yet it is obviously possible that errors of this kind might be cumulative, and that, on the one hand, an unduly small quantity of an attenuated culture, or, on the other hand, an unduly large quantity of a culture of excessive virulence, might be prescribed. In view of these considerations, which do not appear to have been sufficiently appreciated by Mr. Haffkine, and, failing the production of experiments to show that no serious results need be anticipated from the inoculation of large doses, and that adequate protection is conferred by the inoculation even of small doses, we cannot but take a serious view of the fact that, in a case like the present where the estimation of the virulence was neglected, the weight of the bacterial sediment in a prescribed dose was in some samples of the vaccine seven times as large as in other samples. The details of the experiments upon which this statement concerning the weights of sediment is based are to be found in Table III in the evidence of Lieutenant Stewart Douglas, I.M.S. In view of the results of these weighings, and further, in view of the fact that no mere estimation of opacity would enable a judgment to be arrived at as to the quantity of dissolved toxins contained in a fluid, should any such be present, it seems to us that the routine method of standardizing the vaccine which was employed by Mr. Haffkine, must be pronounced to be imperfect. So imperfect is the method of standardization that we have no data for judging what the relation of strength is between doses of the samples we examined and the original dose which Mr. Haffkine has taken as his standard, nor are we able to form any estimate of the quantity of bacterial sediment which was contained in the original "standard dose." Assuming that the results obtained in our weighings represent the extreme limits of variation, the quantity of bacterial sediment employed may have consisted of any amount from 8 to 56 milligrammes.

26.472—99.

26,272—6.

(VII and VIII.) Criticisms of composition of vaccine and of volume injected.

37. It has been seen above that the volume of the vaccinating injection which is prescribed by Mr. Haffkine has varied between 2½ and 20 c.c. Further, we have seen that the volume of the injection may have amounted, on the average, to something like 7½ c.c. In view of the fact that considerable difficulty is experienced in the injection of such large quantities of vaccinating material, and, further, in view of the fact that the menstruum (which, since it contains peptone, is a toxic menstruum) bears here so large a proportion to the vaccinating substance proper, it becomes a matter of importance to consider in detail the composition of the vaccine.

Mr. Haffkine's theoretical assumptions regarding vaccine.

Mr. Haffkine, in accepting these large quantities as necessary in cases where a scanty growth of plague has occurred in his nutrient medium, bases himself on three confessedly *à priori* and provisional assumptions. The first of these assumptions

is, that the bacterial sediment protects the patient against being attacked by plague, while it does not in any way improve his chances of survival when he has been attacked. The second of these assumptions is, that the supernatant fluid of his anti-plague vaccine secures to the patient a greater chance of recovery when attacked.

App. LXXXII.

The third of these assumptions is, that the best composition of the vaccine is secured when the bacterial sediment and supernatant fluid are present in the vaccine, "in the proportion in which these elements are obtained in the process" of manufacture adopted by Mr. Haffkine. Mr. Haffkine adduces as a basis for these *à priori* assumptions the fact that the case mortality, *i.e.*, the percentage of deaths to attacks, has been reduced in the case of anti-plague inoculation, where the bacteria are injected in conjunction with the liquid menstruum in which they are grown, whereas the case mortality was not reduced in the case of the anti-cholera inoculations, in which the vaccine material consisted of cholera bacteria which were suspended in a merely watery menstruum. But, even if we assume the correctness of this particular statement, Mr. Haffkine's conclusion does not necessarily follow. For so numerous are the points of difference between cholera and plague that there can be no logical justification for asserting that a particular effect, which manifests itself in the case of one of these diseases, and not in the other, is an effect which is imputable to a particular modification of the vaccine which was employed.

31.

The utility or otherwise of each separate element in the plague vaccine is manifestly a matter which can only be determined by experiment. We may, therefore, set ourselves to inquire in the case of each element, first, whether any specific toxic effect, and, secondly, whether any protective effect, is produced by the introduction of that element into the system.

Toxic effect of dead plague bacteria forming sediment of anti-plague vaccine.

38. We begin with the consideration of the deposit of plague bacteria which collects in the culture flasks.

It has been firmly established by numerous experiments in which dead bacterial cultures have been introduced into the organisms of animals—and in this connexion we may specially note the experiments which were done by the German Commission on monkeys—that the dead bodies of plague bacilli contain appreciable quantities of poisonous substances. Alterations in the blood, hæmorrhages in the gastric mucous membrane, and necrotic changes in the sub-cutaneous tissues at the site of the injection and in the liver, are the pathological effects which most often manifest themselves after the injection of plague bacilli.

Protective effect of the sediment.

39. It is not open to doubt that the introduction of the toxic elements, which are contained in the bodies of the plague bacilli, ultimately confers upon animals a certain power of resisting plague.

Annales de l'Institut Pasteur 1895.

Yersin, Roux, and Borrel, in 1895, first brought forward evidence to show that a certain amount of protection could be conferred by inoculations of dead plague bacilli.

Local Government Board Report, 1896-7. 26,518.

Further, we may note that this fact was confirmed by the experiments of Dr. Klein. We desire particularly to direct attention to the fact that a certain measure of protection was obtained in these experiments of Dr. Klein, for Mr. Haffkine has drawn from these experiments the conclusion that a protective measure may turn out to be effective in man, even when experiments on lower animals do not appear to contain "any elements justifying its application to men."

The protective efficacy of injections of dead plague bacteria is further established by the many very careful experiments of the German Plague Commission. In particular, it was shown by the German Plague Commission that in the case of the brown monkey (*macacus radiatus*), and in the case of the rat, a considerable measure of protection can be conferred by these inoculations. But the experiments of the German Commission also show that very slight, if any, protection is conferred by these inoculations on the grey sacred monkey (*semnopithecus entellus*).

The protective effect of inoculations of dead bacterial cultures was again confirmed by our own experiments. These were done on guinea-pigs, brown monkeys and rats.

26,311.

It is to be noted that in the many series of experiments which have been referred to above, there is hardly to be found an instance (unless possibly we have such an instance in the case of certain experiments on rats which were performed by Lieutenant Walton, I.M.S.), where a very high degree of immunity has been obtained. In almost every instance, severe symptoms have supervened upon the inoculation when the test quantum of plague bacteria was introduced into the vaccinated animal. What was achieved in the above experiments was, therefore, merely a modification of the plague attack, and a delayed or diminished mortality. These results (which, be it noted, were obtained by the injection of plague bacilli suspended in a merely watery medium) are in all respects identical with the results which have been obtained on man in cases where Mr. Haffkine's inoculation has not succeeded in averting an attack of plague. Thus the diminished case mortality which Mr. Haffkine imputes, in the case of man, to the effect of the supernatant fluid which forms a constituent of his anti-plague vaccine, is, in the case of animals, obtained in the absence of that supernatant fluid.

Toxic effect of filtrate from plague cultures (supernatant fluid of anti-plague vaccine).

40. The question as to whether the supernatant fluid of Mr. Haffkine's prophylactic causes, when injected into the organism, the elaboration of substances which modify the severity of a plague attack, is a question which cannot be answered until we have determined whether a specific toxin is produced when the plague bacillus is cultivated in a fluid nutrient medium. It behoves us, therefore, first to consider this question.

Loc. cit.

Yersin, Roux, and Borrel came to the conclusion that there was no specific toxin produced by the plague bacillus when it was cultivated in a liquid nutrient medium.

The German Plague Commission also investigated the question as to whether specific soluble plague toxins were developed when plague bacilli were cultivated in a liquid nutrient medium. In the first series of experimental injections which were made upon animals by the German Commission with a view of resolving this question, filtrates from 10-day old cultures of plague were employed. The experiments were performed upon rabbits and brown monkeys, in each case, 5 c.c. of the filtrate was injected. No toxic effect was observed to follow from these injections. No appreciable amount of soluble toxins was therefore produced in this instance. In a second series of experiments, the German Commission employed carbolized filtrates from sterilized six-week old cultures. The experiments were in this case done upon two rats. No control experiments were done with carbolized bouillon. The German Commission inferred, from the fact that both rats died, that a small quantity of toxins may possibly, after the expiration of six weeks, escape from the macerated bacterial bodies, and pass into solution in the nutrient fluid.

26 378. 26,384—5.

Several additional series of experiments on this question were instituted by ourselves The results of these experiments are incorporated in Tables I, II, and III of Lieutenant Liston's evidence. In the first of these series of experiments the material which was employed was the (carbolized) filtrate from Mr. Haffkine's prophylactic. The animals, which received respectively 2 per cent. and 4 per cent. of their body weight of the supernatant fluid, succumbed to its effects. It is manifest that the carbolic acid in the supernatant fluid may be answerable for this result. In the case of the second series of experiments (*i.e.*, of the experiments whose results are incorporated in Table II), the material which was employed consisted of the non-carbolized filtrate from Mr. Haffkine's prophylactic. In this case, with the exception of an animal which died from intercurrent disease, all the animals survived. A slight amount of necrotic change was observed to occur at the site of injection in the case of the animals which had been injected with doses of supernatant fluid amounting to 4 to 6 per cent. of their body weight. In view of the fact that these necrotic changes did not occur in the

26,384.

control animals injected with similar quantities of Mr. Haffkine's nutrient medium, it is manifest that a small amount of some specific toxin must here have been present in the filtrate from Mr. Haffkine's prophylactic. We are disposed to believe that this small amount of toxin may have been derived from the macerated bodies of the plague bacilli. The material which was employed in the third series of experiments consisted of a filtrate from a culture of virulent plague, which had been grown in ordinary peptone broth.

26,132.

The results of this series of experiments are incorporated in Table IV of Lieutenant Liston's evidence. It was here established that when the plague bacillus is grown in an ordinary peptone broth toxins which are lethal to guinea-pigs may, under certain conditions, be produced. In the experiments in question, the animals succumbed when the amount of the filtrate amounted to or exceeded 5 per cent. of their body weight.

No protective effect obtained from filtrates of plague cultures. Loc cit.

41. The first experiments which were made to determine whether any protection was conferred by injections of filtrates from plague cultures were made in 1895 by Yersin, Calmette, and Borrel. These observers arrived at the conclusion that such injections conferred no protection.

Report of German Plague Commission, p. 336.

The German Plague Commission re-investigated this question. They experimented upon two monkeys. Each of these monkeys received a subcutaneous injection of 5 c.c. of the filtrate of a 10-day old bouillon culture. Both monkeys succumbed to a subsequent test inoculation of plague. In the case of one of the monkeys no protection, and in the case of the other, only a very slight amount of protection, would appear to have been conferred. This latter effect is explained by the German Commission by the assumption that the filtrate which was used in this case must have contained a certain quantity of substances which were derived from the macerated bodies of the plague bacilli.

Report of German Plague Commission, p. 320.

In addition to the experiments which have just been recorded, the German Commission made experiments on monkeys with the supernatant fluid, which was filtered off from a sample of Mr. Haffkine's prophylactic, and they compared the effects of the supernatant fluid with the effects of the bacterial sediment. The results of these experiments led the Commission to the conclusion that the whole protective power of Mr. Haffkine's vaccine was resident in the bacterial sediment, as distinguished from the supernatant fluid.

The above results are in absolute conformity with the results which were obtained by ourselves in two series of experiments.

26,385.

In the series of experiments recorded in Table III of Lieutenant Liston's evidence, it will be seen that the only guinea-pig which had survived the inoculation of the carbolized filtrate from Mr. Haffkine's prophylactic fluid succumbed with extreme rapidity when tested with a living culture of plague. This guinea-pig had obviously not acquired any power of resisting plague.

26,434.

The results of the second series of experiments are recorded in Table VI of Lieutenant Liston's evidence. In this series of experiments the prophylactic power of the supernatant fluid of Mr. Haffkine's vaccine was compared with the prophylactic effect of a freshly-prepared sample of his nutrient medium. It was found that the average period of survival of (*a*) the three guinea-pigs who received only injections of the nutrient medium, and (*b*) of the three guinea-pigs who received comparable quantities of the filtrate from Mr. Haffkine's prophylactic fluid, was in each case 2⅓ days. It is manifest, therefore, that if there is any specific soluble plague toxin in the filtrate from Mr. Haffkine's prophylactic fluid—and we have seen that this is doubtful—this specific plague toxin must be a toxin which confers absolutely no protection against plague.

Summary of criticisms on composition and volume of Mr. Haffkine's anti-plague vaccine.

42. The evidence which has been reviewed above appears to place beyond doubt the fact that the injection of the bacterial sediment does in the case of animals exercise an effect in the direction of the production of immunity. This immunity may be absolute where the test-quantum of plague culture which is introduced into the organism does not exceed a very small

minimum. In such cases as this, the plague bacilli are destroyed before they can produce any noticeable symptoms. In other cases, what is achieved is merely a modification of the plague attack. This effect comes under observation wherever the test-quantum of plague culture which is introduced into the system is somewhat larger than the maximum quantity which the system is capable of effectually dealing with.

Further, the evidence which has been considered above indicates that the filtrate which is derived from the plague culture (the supernatant fluid of Mr Haffkine's vaccine) does not lead to the elaboration of any substances which are capable of favourably modifying a plague attack. It neither confers upon animals any immunity against attack, nor does it, so far as can be seen, operate in the direction of reducing mortality. It would appear, therefore, that the supernatant fluid might with advantage be dispensed with in the case of man, and it might readily be eliminated from the vaccine by a mere process of decantation. If it was so eliminated, several advantages would be gained. The task of inoculating would be rendered very much less laborious. The reduction of the volume of the vaccinating material would tend to diminish the dangers which might result from the possible contamination of the vaccine. By the elimination of the supernatant fluid there would be eliminated from the vaccinating material a considerable quantity of a poisonous substance (peptone)* which stands in no known relation to the production of immunity

General summary of criticisms on mode of preparation of Mr. Haffkine's vaccine.

43. While making the criticisms which we have been compelled to make above, on the methods which are employed by Mr. Haffkine, we have not lost sight of the fact that the only essential points in an anti-plague vaccine are, first, that it shall be capable of preventing and of favourably modifying attacks of plague; secondly, that it shall be capable of conferring an effect that will last some time; and thirdly, that it shall be capable of producing these good results without entailing any serious evil consequences.

Of subordinate importance to these are the questions, first, of the complete freedom from contaminations, and secondly, of the correct standardization of the vaccine. These have a practical importance only in so far as such defects may be the cause, on the one hand, of unnecessary suffering to the patient, and, on the other hand, of inadequate protection.

In other words, we recognise that even though a vaccine which is insufficiently standardized, and which is occasionally contaminated, is from the scientific point of view a very imperfect vaccine, yet judged from the standpoint of practical life, such defects may very well be overlooked if the insufficient standardization and the occasional contamination of the vaccine have not interfered in a sensible manner with its utility. This standpoint, which is indeed the only reasonable standpoint, is the standpoint which has been taken up by Mr. Haffkine in the statement that was handed in by him, and which is published at his request in our Proceedings.

App. LXXXIII.

Innocuousness of contaminating micro-organisms present in anti-plague vaccine cannot be deduced from results of inoculation of small-pox vaccine.

Several of the statements which he makes in that memorandum do not, however, altogether commend themselves to us. We are of opinion, in the first place, that the importance of the presence of the contaminating micro-organisms in the anti-plague vaccine is not diminished by pointing out that such contaminations are present in the vaccine lymph which is employed in anti-small-pox inoculations. On the contrary, we think that the disadvantages which are associated with the presence of contaminating micro-organisms in small-pox lymph cannot be overlooked. Again, we are of opinion that, while the bacterial contaminations of small-pox lymph cannot at present be entirely avoided, it would be possible in the case of a bacterial vaccine, such as the anti-plague vaccine, to take effective precautions against the presence of these contaminating micro-organisms. We consider this the more necessary, inasmuch as, in the case of anti-plague vaccination, considerable quantities of fluid are introduced sub-cutaneously, whereas, in the case of small-pox, contaminating micro-organisms are only placed on the surface of the skin. In view

App. LXXXIII.

* We have not made any direct experiments on the toxic effect of peptone on man, nor do we know of any experiments made by Mr. Haffkine to determine whether any toxic effects result from the inoculation of his culture-medium in man. But we conceive that it is hardly possible that a dose of 20 c.c. of a peptone solution, which may possibly contain from 3 to 6 per cent. of peptone, can be quite indifferent to the human organism.

of this fact, we do not consider that Mr. Haffkine is justified in asserting that the contaminating micro-organisms which find their way into his vaccine are harmless, "as are harmless all those innumerable microbes that we eat and drink and breathe in our daily life, or as is harmless an apple, or an onion, or a mango, or any other living vegetable fruit that we eat uncooked." Manifestly we have here a comparison between things that are not in any respect comparable. The contaminating micro-organisms are, in one case, introduced into the alimentary canal where they are innocuous, and, in the other case, into the sub-cutaneous tissues, where they may quite well be harmful.

Such statements, however, apart, we find ourselves in agreement with Mr. Haffkine, that the good and the evil results of inoculation must be judged, not from experimental data obtained in the laboratory, but rather from the results which have been actually obtained in man.

No serious ill effects have been produced by inoculation of Mr. Haffkine's prophylactic fluid.

44. We may dismiss in a few words the question of the evil effects which have resulted from Mr. Haffkine's inoculation. We have not had any evidence laid before us which goes to show that any serious ill consequences have resulted from the defect in sterility which was spoken of above. We made careful inquiries into this question in the various centres where anti-plague vaccinations have been performed. In the overwhelming majority of cases no evidence was adduced to show that any injurious effects had supervened upon inoculation. In a few isolated cases, however, there was evidence that abscesses had occurred in the vaccinated at the seat of injection. It is, of course, not certain that these abscesses were imputable to the condition of the vaccinating material. On the other hand, it must be noted that in many cases the long-continued reaction at the seat of inoculation and the continuance of the fever seemed to point to the presence of a certain amount of septic contamination. The German Commission also had this question under consideration. They state that they were not able to determine whether they were in these cases dealing with anything more than purely toxic effects.

4743, 4781, 11,705, 16,568.

We have to consider, in connexion with this question of the possibility of evil results imputable to the anti-plague inoculation, a few cases in which death occurred suddenly in a few hours after inoculation in the case of persons who before inoculation appeared to be quite healthy. We have come to the conclusion that these cases are not to be imputed to any defect in the anti-plague vaccine. In addition to the fact that they have been quite isolated occurrences, there is the fact that no such cases of death have been reported to us as having occurred in two or more persons who were inoculated with the same vaccine These cases of sudden death have always occurred at a time when plague cases were actually occurring, while they have not occurred in the absence of a plague epidemic. We are, therefore, of opinion that such sudden deaths are probably imputable to the fact of the inoculation having been made into a person who had already contracted the infection of plague.

2388—4973.

Having said this, we may now pass from the consideration of these preliminary questions which relate to the composition and preparation of the vaccine to the consideration of the results which have been obtained in actual practice by its application.

Effect of inoculation of prophylactic fluid on Mr. Haffkine.

45. Mr. Haffkine first tried the physiological effect of the prophylactic fluid on himself. His description of the effect produced may here be introduced as representing the ordinary symptoms which follow inoculation. He says: —"The amount with which I was injected was 10 cubic centimetres, of which 6 c.c. were injected into my left flank, and four into my right The symptoms, as far as they were perceptible, were as follows. Three or four hours after the injection my temperature began to rise, and reached the maximum 102½° F. in 8½ hours. From that time my temperature began to fall. At the seat of injection, almost parallel with the development of the fever, a tenderness began to develop, and reached its maximum next morning, which was about 15 hours after the time of injection. The region under my left arm, somewhat below the axilla, became tender on pressure, though, in my case, no glandular swelling formed.

The seat of the inoculation reddened, and swelled and became so painful that I had great difficulty in getting up next morning. Still I was able to do so, and at no moment was I obliged to interrupt my work. I was inoculated on the 10th January (1897), and on the 11th an important meeting was to be held, presided over by the Director-General of the Indian Medical Service, Surgeon-General Cleghorn. I was able to take part in the meeting and until my symptoms had entirely disappeared, scarcely anyone knew that I had been inoculated, except the operator (Dr. Surveyor) and the Principal of the Grant Medical College, who had witnessed the operation. The fever disappeared between 20 and 24 hours after injection, when my temperature reached normal. The pain at the seat of inoculation, however, lasted for several—four or five—days and after the pain disappeared the nodule remained for a couple of weeks longer."

First inoculations in Bombay.
32.

46. After Mr. Haffkine had thus tested his fluid on himself he proceeded to inoculate volunteers from the general public of Bombay, with doses that he estimated to correspond with one quarter of that which had been used in his own case. He says:—"In the course of the first three weeks, from the 10th until the end of January (1897), several hundred persons of all ages and sexes offered themselves to be inoculated and the effects were carefully observed on them. In no instance did we see anything which would point to a marked difference from the effect of the cholera inoculation, or which would indicate the possibility of evil consequences to the general health. This result impressed itself so much on the minds of those who underwent the inoculation or studied its effect on others that in the cours[illegible] the next few months 8,142 people in Bombay came to avail themselves of the new treatment." Of these at least "356 belonged to the higher classes; 2,119 to the lowest; [illegible]est were between the two. The vast majority of these cases were perso[illegible] and read newspapers, and who had physicians to consult. Under these condi[illegible]ns the fact of the 8,142 people escaping infection would probably have only a very relative bearing on the question as to the efficacy or [illegible] of the inoculation if it had not happened that out of the 8,142 people 18 did get infected, all natives of India, chiefly of the class of servants, and went through the full course of the disease. Out of the 18 persons 16 recovered, and the two who succumbed had developed unmistakeable symptoms of plague within 24 hours of inoculation. From the history of these two cases it apppeared probable, and in one case I know now for certain, that they had symptoms of plague on them already at the time of inoculation."

48—49.

Mr. Haffkine says that it is almost certain that no fatal case, except the two mentioned, occurred among the inoculated, for "a large part of the persons inoculated in Bombay during the first part of 1897 were literate people who read books and newspapers, and were perfectly aware of the novelty of the treatment, whilst the vast majority of the rest were their servants" As, moreover, "the physicians in Bombay . . . kept a perfectly open mind with regard to the efficacy of the inoculation," and "exceedingly few expected any actual good from it . . . cases of plague, especially fatal cases, would not have escaped our attention or the attention of those who were observing the progress of this work." On the contrary, says Mr. Haffkine, "whatever seemed to be abnormal in the immediate effect produced by inoculation, even the most insignificant symptoms, were brought to our knowledge with detail and alarm. . . . . However, it is obvious that in a large city like Bombay there was no possibility of our investigating a direct inquiry and following-up every one of the 8,142 cases inoculated.

52.

Inoculations at Mora.

Mr. Haffkine, however, states that "somewhat more complete data were obtained with regard to a small group of people included in the above number of 8,142, but who lived half an hour from Bombay, across the harbour, namely, in Mora village. The population of Mora when the plague broke out was under 1,000, and out of this number 429 underwent inoculation; the rest remained uninoculated," the number of the uninoculated people being only approximate. Of the inoculated, seven were attacked

52.

with plague with no deaths, while among the uninoculated 26 cases with 24 deaths were reported. "I quote this instance," says Mr. Haffkine, "because it produced a great impression upon the inhabitants of Mora, and because its influence was reflected upon Bombay. But owing to the great pressure of work at the time, I could not follow up the cases in Mora to such an extent as to be able to guarantee that the figures are absolutely correct."

27,310, 27,315.

The attacks which took place appear to have all occurred before the beginning of February 1897. If, for the reasons given by Mr. Haffkine, we eliminate from consideration the two cases that proved fatal, the results with reference to the total number of persons inoculated, for a period which has not been specified, may, from Mr. Haffkine's statement, be summarised as follows :—

Number of Persons Inoculated.	Attacks.		Deaths.	
	Number.	Per cent.	Number.	Per cent.
8,142	16	·2	0	0

The results for the group of inoculated persons, included among the above, who were resident in Mora, are, according to the evidence laid before us, as follows :—

——	Number.	Attacks.		Deaths.	
		Number.	Per cent.	Number.	Per cent.
Uninoculated .	571 (?)	26	4·5	24	4·2
Inoculated . .	429	7	1·6	0	0

There are, however, no accurate data enabling us to form an opinion as to how many of the total of 8,142 inoculated actually escaped. Many of them belonged to the lowest classes, and it is by no means certain that deaths from plague among them would have been reported, especially as many may have left Bombay after the inoculation. Moreover, no death was reported among the 16 persons who were attacked, and such a reduction of case mortality has never been noticed elsewhere.

Her Majesty's House of Correction, Byculla. 20,351—2.

47. An opportunity soon offered itself for testing the prophylactic fluid under conditions that permitted of strict observation of the results of inoculation. Plague broke out on the 23rd January 1897 in Her Majesty's House of Correction at Bombay, and between the 23rd and the afternoon of the 30th of the month, when inoculations were resorted to, 14 cases of plague had been recognised, of which seven proved fatal. The official figures represent that of 338 prisoners present in the jail, 153 were inoculated and 185 were not inoculated. But from the detailed list of prisoners supplied to us, on which these figures are obviously based, it would appear that from the number of 185 not inoculated, there ought for the purposes of our comparison to be subtracted the 14 persons who had been recognised as plague patients before inoculations commenced. Moreover, correspondence which we have had regarding the official figures, and which is published as App. No. LXXXVIII in our Proceedings, has shown that one prisoner enumerated in the Jail list as among the inoculated, was in reality not inoculated. The numbers of the non-inoculated and inoculated, after the necessary corrections, would stand respectively as 172 and 152. With these we may compare Mr. Haffkine's figures, first, as given in evidence before us, and secondly, as given in a communication addressed by him to the Royal Society, and published in the "British Medical Journal" of the 1st July 1899. Before us Mr. Haffkine said the number of prisoners in the jail was 327, of whom 154 were inoculated. In his communication to the Royal Society he gave the total number of prisoners as 337, and the numbers of the inoculated

and uninoculated respectively as 183 and 154. These discrepancies are of little importance. We have for convenience adopted the fuller statement that Mr. Haffkine made before the Royal Society to represent his figures.

The course of the plague in the jail up to the date when it ceased, and the occurrences of attacks and deaths among the inoculated and the uninoculated respectively, according to the corrected official figures, and also according to the figures laid by Mr. Haffkine before the Royal Society, are exhibited in the following table in parallel columns :—

—	NON-INOCULATED.				INOCULATED.				Names and Official Numbers of Inoculated Prisoners who contracted Plague.

On looking at this table, two discrepancies will be noticed which have a bearing on conclusions drawn regarding the relative immunity of the inoculated and the non-inoculated. One relates to the case of an inoculated prisoner, Ganput Babajee, who appears in the official statement as having been attacked with plague on the 2nd February. This man is omitted from Mr. Haffkine's statement, and the omission is explained on the ground that the diagnosis of plague was erroneous. But we have not excluded this man from our figures, as he was definitely held by the medical officers of the jail to have suffered from plague, and may, like two inoculated prisoners whose cases were brought to our notice in connexion with inoculations in the Umarkhadi jail at Bombay, have been suffering from a modified attack of the disease. The second discrepancy relates to three patients who are excluded from consideration by Mr. Haffkine in calculating his results, on the ground that they had already contracted plague at the time when the inoculations were performed. If, however, cases are to be excluded for the reason that the full incubation period had not elapsed between the date of inoculation and the date of attack, we should, assuming that the incubation period may last as long as five days, omit not only the three prisoners omitted by Mr. Haffkine, but also every one who was attacked up to the 4th February. If this was done, and we think that it ought to be done, there would remain seven cases among the uninoculated, with two deaths, contrasted with one case, which recovered, among the inoculated. The comparison would thus be greatly in favour of the inoculated. The results, however, do not seem to justify the conclusion drawn from them by Mr. Haffkine that protection is acquired within 24 hours of inoculation, for during the first five days after the inoculations, there were five cases among the inoculated as compared with four among the prisoners who remained uninoculated.

47.

Lower Daman.

48. After the experiment in the Byculla House of Correction, inoculation was next tried at Daman, where plague had broken out in March 1897, as already stated in para. 45 of this Report The circumstances connected with the inoculation operations at Daman were made the subject of a Special Joint Report by Mr. Haffkine

and Major Lyons, I.M.S. The Report was based on inquiries made at Daman on the 20th and 21st of May, at which Drs. Koch and Gaffky, the heads of the German Plague Commission, assisted, and upon a house-to-house visitation carried out at the end of the month by Major Lyons. The results of the different series of inoculations that were done are separately grouped in the Joint Report, where the results that were obtained in the first three series are considered.

Normal population of Lower Daman.

Before entering into the results of the inoculations we must consider what was actually the population of Lower Daman at the commencement of the period of observation. Mr. Haffkine and Major Lyons definitely state that the normal population of Daman Proper, Katheria, and Kariwari, which constitute the town of Lower Daman where the inoculations were performed, is 5,000, 4,700, and 1,200 respectively, amounting in all to 10,900. This statement was not based on a special census, but on information received from His Excellency the Governor that the population amounted to 11,000, and from a Parsee gentleman, who introduced inoculation into Daman, that the population amounted to 10,000. Major Lyons, under examination, admitted that the figures were arrived at "by a guess."

27,229.

Population at commencement of inoculation.

From the normal population thus arrived at, the population actually present at the commencement of the inoculations was computed by making certain deductions. A deduction was made for the diminution of the population due to exodus. In the Joint Report it is estimated that 2,000 people had left the place before the 23rd March 1897, but this figure, like that of the normal population, was a pure guess, apparently made by Mr. Judge, Assistant Collector of Salt Revenue. Another deduction was made for a decrease in the population on account of deaths from plague since the outbreak commenced. This again was made in a somewhat loose manner. It was based upon an estimate formed by His Excellancy the Governor that the deaths in February might be neglected, and that the deaths in March might be assumed to amount on an average to 30 a day; but it is clear that there was no system of death registration which was at all trustworthy or capable of affording assistance in arriving at a correct estimate.

27,239—41.

Results claimed from inoculation.

The inoculations which were performed in each of the three series, and the results which are claimed for them, may be tabulated as follows from particulars given in the Joint Report, viz.:—

FIRST SERIES.

Inoculations performed from the 23rd to the 26th March 1897.

Results claimed to have been obtained for the period from the 26th March to the 23rd April:—

Number.			Cases.	Deaths.	Total Plague Mortality.	Case Mortality.
					p. c.	p. c.
Inoculated	Dr. Kalapesi	846	17	3	·4	17 6
	Dr. Poiares	171	6	3	1·8	50
	Total	1,017	23	6	·5	26
Uninoculated		7,213	—	716	9·9	—

SECOND SERIES.

Further inoculations performed from the 17th April to the 2nd May 1897.

Results claimed for the period from the 2nd May to the 19th May:—

—		Surviving from First Series.	Inoculated in Second Series.	TOTAL.	Cases.	Deaths.	Total Plague Mortality.	Case Mortality.
							p. c.	p. c.
Inoculated	Dr. Kalapesi	843	529	1,372	52	18	1·3	34·6
	Dr. Poiares	168	99	267	12	9	3·3	75·0
	Total			1,639	64	27	1·6	42·0
Uninoculated				5,869	—	674	11·5	—

THIRD SERIES.

Further inoculations performed from the 21st to the 23rd May 1897.
Results claimed for the period from the 23rd May to the end of May :—

—	Surviving from First and Second Series.	Inoculated in Third Series.	TOTAL.	Cases.	Deaths.	Total Plague Mortality.	Case Mortality.
						p. c.	p. c.
Inoculated, Dr. Kalapesi and Dr. Da Cunha.	1,354	552	1,906	1	1	·05	100
Inoculated, Dr. Poiares .	258	0	258	3	2	·8	66
Total .			2,164	4	3	·1	75
Uninoculated . . .			4,643	—	93	2	—

Mr. Haffkine and Major Lyons sum up the results as follows :—" During the three periods of observations put together, between the 26th March and the end of May, 6,033 uninoculated had 1,482 deaths (24·6 per cent.), while 2,197 inoculated had 36 deaths (1·6 per cent.). . . . This represents a difference in mortality of 89·2 per cent."

Criticism of figures tabulated above.

It is to be noted that between the dates when the first period of observation closed and the second period opened there is a gap of eight days, while there is a similar gap of three days between the second and third periods of observation. But a scrutiny of the statements shows that the figures of the population—and this is particularly important in connexion with the uninoculated part of the population—at the opening of the second and third periods of observation, respectively, can be arrived at from the figures of the preceding period by a simple subtraction of the deaths put down for that period, and by a transference of the number of newly inoculated persons from the category of the uninoculated to that of the inoculated. It is obvious that Mr. Haffkine and Major Lyons have altogether omitted to take into account the deaths which must have taken place in the gaps which we have noticed. We have no means of telling exactly how many deaths have thus been left out of account, but we may remark that there is a table in the Joint Report itself from which we have ascertained that 327 deaths are recorded as having occurred between the 25th April and the 2nd May. Further, we have not been informed how the inoculated who were operated upon between the 17th April and the 23rd April, inclusive, were brought to account in case any plague occurred among them. Moreover, the number of inoculated persons with which the third period of observation opens includes 54 persons who had been attacked by plague during the two preceding periods, and were, for the most part, probably convalescent. These persons ought after their attack to have been excluded from further consideration. A similar deduction ought to have been made for the number of the uninoculated persons who had been attacked. As the number of attacks among the uninoculated is not given, we have, taking as our guide the case mortality given for the uninoculated in the Daman investigation sheets, presently to be referred to, estimated that the number of uninoculated persons who had been attacked in the first two periods of observation must have been about 417. Lastly, it is important to notice that the method of computation adopted in the Joint Report admits of another serious cause of error, inasmuch as it makes no allowance for diminution of population by exodus.

Method of ascertaining deaths at Daman.

The next point to consider is whether the data concerning attacks and deaths incorporated in the Joint Report are themselves accurate. Up to the 25th April, which covers the first period of observation, the daily mortality " was recorded officially by information from the inhabitants coming to the registration office to declare cases of deaths in their families." To show how inaccurate the official registration of deaths was at that time, it may be stated that on the 25th April the Governor placed a guard of his own on the burial and burning grounds, and

on that day, though the number of deaths reported by the inhabitants was 11, the number of bodies disposed of in the presence of the guard was 34. It is evident that during the first period of observation the number of deaths as registered by the authorities is quite inaccurate. From the 25th April an official guard was kept permanently on the burial and burning grounds by His Excellency the Governor. From this date onwards the official information available regarding the number of bodies disposed of is, we may presume, more accurate. But the official measures provided no means for ascertaining the occurrence of plague till after death, and in view of the fact that inoculation was not introduced on the initiative of the Portuguese Government, no official steps appear to have been taken to ascertain whether any of the dead had been inoculated.

Mr. Damaun Valla's statistics. 25,427.

The official information regarding the mortality and attacks in Daman is, however, supplemented by the inquiries instituted and carried on by a Parsee gentleman, Mr. Seth Sorabji Damaun Valla, who was particularly interested in the inoculations. We must pay particular attention to the investigations of Mr. Seth Sorabji Damaun Valla, for the Daman figures appear to be almost entirely dependent on his statistics, or rather on the figures gathered by his peons and servants. He states that he kept a watch over the people inoculated in Daman by employing about half-a-dozen agents who knew all the people. Whenever people were inoculated, his servants inquired every day to ascertain how they were getting on. Those who were inoculated also had instructions to let him know if there was any sickness among them. Then he had his sepoys and servants at the burial and burning grounds at the beginning of plague, and they brought information if his other people failed to give it. They inquired whether bodies brought for disposal were inoculated, and ascertained the name, and reference was afterwards made to the inoculation registers. Asked how he was satisfied that the answers they gave him were true answers, he stated that: "Because whenever they were ill I used to know it, and gave them medicine as I gave to others also. Generally people came to me running whenever they got ill and my men always used to go and inquire who was ill amongst the inoculated people." We can hardly believe that the information thus obtained can be accurate, and in support of this opinion, it will only be necessary to quote an answer given by Mr. Seth Sorabji Damaun Valla to a question, as follows:—

25,430. 25,432—3.

Q. "Amongst the 2,200 people inoculated in the first season have there been, up to date, any deaths from causes other than plague"?

25,446.

A. "Amongst the inoculated I have not found a death from any cause other than plague."

We are not disposed to admit that a population of 2,200 people had no death among them for two years. But it should be noted here that the authors of the Joint Report in referring to the statistics collected by Mr. Seth Sorabji Damaun Valla state that "these details were found afterwards, in the course of a close investigation by us, to be scrupulously correct." Mr. Haffkine states that "considering the small extent of the town, the limited number of inhabitants, and the number of medical officers who were looking after the place, it appeared probable that not many attacks among the inoculated escaped their notice, as such attacks usually excite much comment among these inhabitants, and attract general attention. Indeed, the gentlemen present at the meeting (on May 20th) seemed to know between them every place in the town where inoculated people lived, and every house which had suffered from plague or happened to escape. As has already been mentioned, they stated at the time that there was a small number of inoculated attacked whom they did not see, but of whom, they informed us, a record existed in the office of Seth Sorabji Damaun Valla. . . He had a personal knowledge of the people who were inoculated, and kept a watch over the effect of the operation, collecting with the help of his office establishment a large number of details in this connection." Mr. John Moniz, a medical officer, who was in the Portuguese Government service during the year 1897, and is one of those referred to in the Joint Report, in answer to the question, whether it was possible to find out regarding each dead body whether the person had in life been inoculated or not, stated that: "In

the year 1897, there was so much confusion and panic that it was impossible to take down these particulars." We can hardly doubt that this statement of Mr. Moniz correctly represents the state of affairs, if we note the extreme virulence of the plague in Lower Daman. In a population estimated to number ordinarily about 11,000 or 12,000, the official figures, defective as they may be, record a total of 2,189 plague deaths from the time of the outbreak in February to the close of the period of observation in May, and a house to house inquiry made by Mr. Seth Sorabji Damaun Valla resulted in the confirmation of 2,093 deaths up to the 19th May 1897.

Conclusions of the German Plague Commission regarding Daman.

We may note that Professors Koch and Gaffky have expressed their opinion that "the material which was collected left much to be desired from the point of view of completeness and trustworthiness, as indeed could only have been expected." "Still," they say, "an impression which may, perhaps, be taken to be approximately correct, was obtained" by them regarding the results of inoculation at Daman. This impression appears to have been strengthened by the results of Major Lyons' enquiries which are incorporated in the Joint Report. The German Plague Commission have generally adopted the statistics set forth in the Joint Report.

Conclusions regarding statistics for Daman as a whole.

Our own conclusions as regards the general effects of inoculation in Daman may be stated as follows. Considering (1) that the estimate of the population of Daman, on which statistics regarding plague incidence in the town are based, is only approximate; (2) that the total number of inoculated and non-inoculated people who left Daman is unknown; (3) that the total mortality in Daman for the period of observation, and particularly up to April 25th, that is during the height of the epidemic, is unknown; (4) that the proportion of deaths reported to have occurred among inoculated and non-inoculated, respectively, at Daman, is based almost, if not entirely, on the reports of the peons, sepoys, and servants of Mr. Seth Sorabji Damaun Valla; and (5) that there are serious errors in the methods by which results have been calculated in the Joint Report; we are of opinion that no exact conclusions can be drawn from the data at our command which relate to the town as a whole. Nevertheless, while unable to accept the statistics as accurate, we attach some importance to the fact that Mr. Damaun Valla and the medical men who observed the effects of inoculation during the outbreak were satisfied that it exerted a great protective influence.

Inoculation among Parsees at Daman.

Having now discussed the figures for the town as a whole, we may consider what conclusions can be drawn from particular series of figures obtained from a narrower field of observation. The first series of data which we may consider in this connexion relates to the Parsee community of Daman. The results as collected by Mr. Seth Sorabji Damaun Valla with reference to 306 members of the community are as follows:-

—	Number under observation.	Cases.	Deaths.
Non-inoculated	29	—	4
Inoculated	277	8	1 (probably infected before inoculation).

Those results are very favourable to inoculation, but in the absence of other details are not sufficient to form a basis for a conclusion.

Daman investigation sheets.

Another series of data is that contained in the record of Major Lyons' house to house investigations. This officer went to Lower Daman on the 26th May 1897, the object of his visit being to find out accurately by minute inquiry in each house the results of the anti-plague inoculations which had been done. For this purpose he divided the town into four sections, and during four days, between the 26th and 30th May 1897, visited all the houses section by section, and he made inquiries at every house inhabited by inoculated persons which was pointed

out to him as one in which a plague case had occurred. In each case he obtained information at the house visited from some one inmate who was "fairly intelligent." As a number of the dwellings had been evacuated and the inhabitants were encamped in the fields outside the town, Dr. Lyons visited them in their encampments and collected information from them, in the same way as he collected information from the houses.

The total results of the inoculations which we have summarised from Major Lyons' investigation sheets regarding 89 houses are as follows:—

——	Number.	Attacks.		Deaths.		Case Mortality. Per cent.
		Number.	Per cent.	Number.	Per cent.	
Uninoculated	123	55	44·7	38	30·9	69
Inoculated	382	91	23·8	36	9·4	39·6
Diminution of mortality in favour of the inoculated					21·5	

Out of the 89 houses to which these figures refer, in 62 houses both inoculated and non-inoculated were present, and in 20 of these the inoculated alone were attacked, while in 22 the non-inoculated alone suffered. In 20 houses both inoculated and non-inoculated were attacked.

In these 62 houses, in which uninoculated controls were present, the results obtained are as follows:—

——	Number.	Attacks.		Deaths.		Case Mortality. Per cent.
		Number.	Per cent.	Number.	Per cent.	
Uninoculated	123	55	44·7	38	30·9	69
Inoculated	255	50	19·6	20	7·8	40
Diminution of mortality in favour of the inoculated					23·1	

The results thus are very favourable to inoculation. It is, however, to be remarked that of the people whose names appear in these investigation sheets none were inoculated till the last week of March, and more than half were not inoculated till the climax of the epidemic had passed. The effects of the inoculations are thus exaggerated, inasmuch as the period of exposure to infection was in the case of the uninoculated greater than in the case of the inoculated.

Comparison between results in investigation sheets and in Daman.

The total mortality from plague among the uninoculated in the houses where both inoculated and non-inoculated persons lived was only 1¼ times larger than the mortality, 24·6, which, according to the Joint Report, is the mortality among the uninoculated in the rest of the town, whereas the mortality among the inoculated people in these houses was about 5 times as great as the mortality, 1·6, which is the figure given in the Joint Report as that of the mortality among the inoculated in the whole of the town. This result may in part be imputable to the under-estimation of the mortality among the inoculated in the town. With reference to houses in which more than one case occurred, we think that the comparatively large proportion of the inoculated residents who were attacked is capable of explanation on the assumption that inoculation is not nearly so protective to persons who are brought into close and continuous contact with infection in their own houses as it is to those who run merely the risk of infection that is incident to living in a plague infected town.

Further results at Daman. 25,441.

To complete the history of inoculation in Daman, it may be added that, according to Mr. Seth Sorabji Damaun Valla, of the 2,200 people inoculated at Daman during the

first season, 46 died of plague in the first season (1897), 19 in the second season (1898), and two in the third season (1899). Of the 1,115 people inoculated in 1898 at Daman, and of the 200 people inoculated during the same season at Katheria, 12 died of plague in 1898 and four in 1899. Of the 397 people inoculated in 1899 no one had died of plague up to March 15th, 1899.

Inoculations at Lanauli. 61.

49. The next series of inoculations were performed at Lanauli, a hill station within four hours of Bombay on the way to Poona. Mr. Haffkine and his assistants proceeded to Lanauli in July, 1897, about a month after plague had broken out again after a temporary subsidence. The total population was then below 2,000, and consisted "largely of railway officers who lived in separate quarters away from the rest of the population. Their quarters remained almost entirely free from plague, and there were only two wards in the town which got the plague badly. . . . . The whole town was divided into four wards, and . . . . the officers of my laboratory," says Mr. Haffkine, "took over the two severely affected wards. We began first of all by taking a detailed census of the population, and I have the investigation sheets referring to each family separately, and giving the ages and sexes and names and other details of the members of every household."

26,535.

The following table has been put before us by Mr. Haffkine to show the results obtained at Lanauli :—

OCCURRENCES of PLAGUE in C. and D. WARDS of LANAULI (put together), between the 24th July, 1897, and the end of September, 1897.

Vol. III, p. 352.

Date.	Number of uninoculated present.	Attacks.	Deaths.	Number of inoculated present.	Attacks.	Deaths.	Date.	Number of uninoculated present.	Attacks.	Deaths.	Number of inoculated present.	Attacks.	Deaths.

12-8-97	318	1	—	370	1	1	Average daily strength	377	—	—	323	—	—

From these figures the results deducted by Mr. Haffkine are as follows :—

—	Average Daily Strength.	Cases.		Deaths.		Case Mortality. Per cent.
		Number.	Per cent.	Number.	Per cent.	
Uninoculated . .	377	78	20	57	15	73
Inoculated . .	323	14	4	7	2	50

Conditions under which average strength may be used as a basis for calculating effects of inoculation.

The method of calculating results which is here adopted by Mr. Haffkine differs from the method which was applied in the case of the inoculations done in the Byculla Jail and at Daman. There the inoculations were all completed before the period of observation began, and the incidence of plague could be calculated on the absolute strengths of the inoculated and uninoculated groups. Here, on the contrary, the inoculations were continued into the period of observation, and there was consequently a transference during that period of uninoculated persons to the inoculated group; therefore, the incidence of plague must, at least for the period during which the inoculations were continued, be calculated, not on the absolute strengths, but on the average

numbers of inoculated and uninoculated persons present. Inasmuch as very considerable complication is introduced when the incidence of plague has to be calculated on the average instead of upon the absolute strengths, it will be convenient here, before considering Mr. Haffkine's calculations, to discuss the conditions under which calculations of this kind will afford accurate indications of the amount of protection conferred by an inoculation. The first point to note in this connexion is that it is essential for the criticism of any calculation which is based on average strengths to have before us in the form of a statement, such as that given above, the numbers of inoculated and uninoculated persons actually ascertained to be present by a series of periodical enumerations, and the numbers of the plague occurrences among them in the intervals between the successive enumerations. In the event of the inoculations having been commenced after the advent of plague, it is desirable to have the figures from the commencement of inoculation down to the end of the outbreak. Having from such a statement deduced the average number of inoculated persons present during the period of observation, the date should be ascertained at which the number of inoculated persons found present approximates most closely to their average strength. This date may be taken as dividing the epidemic into two phases. Throughout the phase preceding this date the inoculated are less in number than their average strength, while throughout the phase which supervenes upon this date their number would be more than the average strength. The direct contrary of this would hold, of course, of the uninoculated. This point having been clearly appreciated, it will appear, on consideration, that the incidence of plague upon the average strengths of the two groups will accurately represent the relative susceptibility of the two groups only when, on the one hand, the excess of the uninoculated in the first phase is accurately balanced by the excess of the inoculated in the second phase of the period of observation, and when, on the other hand, the severity of the plague in the earlier phase is neither greater nor less than the severity of the plague in the later phase. We may note in passing, first, that we may gauge the relative severity of the epidemic by calculating the percentage incidence of plague upon the average strength of the uninoculated for each separate phase, and secondly, that a longer period of less severe plague may be taken as counterbalancing a shorter period of severer plague. Only when the conditions referred to above are complied with will there be a guarantee that the excess of the uninoculated during the earlier phase of the epidemic were exposed to a risk of infection which was neither greater nor less than that which was incurred by the excess of the inoculated in the second phase of the period of observation. On the contrary, when the two phases of the epidemic do not counterbalance each other in the matter of severity, the incidence of plague on the two groups will fail to represent correctly their relative susceptibility to plague infection. Where, on the one hand, the plague was severer in the first phase, the comparison would, owing to the greater exposure to infection of the uninoculated, be unduly to the advantage of inoculation. Where, on the other hand, the plague was severer in the second phase, the comparison would, owing to the greater exposure to infection of the inoculated, be unduly to the disadvantage of inoculation. It will, therefore, be necessary to apply a correction in cases where, owing to the unequal severity of plague in the two phases of the epidemic, a consideration of the incidence of plague on the two groups does not give accurate results. This correction can be applied by striking off one or more rows of figures from the tabular statement which supplies the figures for the calculation. By striking off figures from the top or the bottom of the list of figures we plainly, in the one case, increase and, in the other case, reduce, the average strength of the inoculated, so that the opening day of the second phase of the period of observation will fall upon a later or, as the case may be, an earlier date than that upon which it falls when the average strength has been worked out upon the entire series of figures. By an adjustment of this kind it will be possible to divide up the period of the epidemic into two phases of more equal severity. It is obvious that this process of correction is anything but a simple one. For, in striking off one or more rows from the table, there will be struck off along with the figures which represent the number of inoculated and uninoculated persons, also the corresponding figures for plague attacks and deaths. Inasmuch as the estimate of the severity of plague, in the particular phase to which the eliminated figures refer, will have been based in part upon those figures, it may be necessary to compensate for this by a secondary correction. It will, in short, be necessary to resort to a system of

"trial and error" to determine what period of observation will yield an average strength, such that the two phases of the epidemic which are, as we have seen, disposed on either side of the date on which the inoculated attained the average strength upon which the incidence is calculated, may be as long as possible, and may, as nearly as possible, represent periods of equal exposure to infection.

Consideration of results at Lanauli.

In accordance with the principles above laid down, we may, in connexion with Mr. Haffkine's tabular statement regarding Lanauli, first consider the question of the necessity of resorting to a calculation on average strengths. A consideration of the table will show that, owing to the practical completion of inoculations on that date, a calculation on absolute strength would be applicable from the 5th of August onwards to the end of the epidemic. If this had been applied the incidence of plague in the inoculated and the uninoculated groups would have worked out as follows:—

—	Number.	Attacks.		Deaths.		Case Mortality. Per cent.
		Number.	Per cent.	Number.	Per cent.	
Uninoculated	330	29	8·8	18	5·4	62
Inoculated	370	5	1·3	3	·8	60
Diminution of mortality in favour of the inoculated					4·6	—

Mr. Haffkine has instead resorted to a calculation on average strengths, and we may now examine his calculations with a view to see how far they conform with the principles enunciated above. Inspection of the tabular statement will show that the number of the inoculated reached the average strength, 323, on which Mr. Haffkine calculates the incidence of plague, on the 1st of August. Consequently this date marks the point at which the period of observation is divided into its two phases. In the first of these phases—the phase throughout which the inoculated were below their average strength—the severity of the epidemic is measured by the fact that of the average strength of the uninoculated during that phase 5·2 per cent. were attacked. In the second phase—in which the inoculated were throughout in excess of their average strength—the severity of the epidemic is measured by the fact that 15·8 per cent. of the average number of the uninoculated present during that phase were attacked. In view of this, it will be seen that the comparison which Mr. Haffkine has made is unduly to the disadvantage of inoculation. We may, however, note that the comparison is not as inequitable as might have been expected from the unequality in the severity of the plague in the two phases of the period of observation. This is probably due to the fact that, very early in the second phase, the number of the inoculated reached its maximum, and that during the long period which intervened between the attainment of this maximum and the end of the epidemic, the numbers of the inoculated and of the uninoculated did not differ very materially from the average numbers taken over the whole period of observation. That this is the real explanation of the fact that Mr. Haffkine's calculation is not more inequitable to inoculation will be obvious if we consider what his results would have been if he had taken only the period before the 5th of August. A calculation on average strengths from the figures up to this date would give the following results:—

—	Number.	Attacks.		Deaths.	
		Number.	Per cent.	Number.	Per cent.
Uninoculated	491	49	10	39	7·9
Inoculated	239	9	3·7	4	1·7

Results more unfavourable to inoculation would thus be obtained, and this is in accordance with the fact that the excess of the inoculated over their average strength in the severer phase of the period of observation which ends on the

4th of August, is relatively greater than their excess over their average strength in the severer phase of the longer period of observation which was taken into consideration in Mr. Haffkine's calculation.

We may now pass on to consider the more important question of the trustworthiness of the data on which the above calculations are based, and the method which was employed for determining the numbers of inoculated and uninoculated present in Lanauli on each day during the period of observation. A scrutiny of the figures representing the numbers of the inoculated and uninoculated present on the successive days in Mr. Haffkine's table given above shows that they cannot have been based upon a daily census. The figures given for each day can be computed, in every case but two, from those of the preceding day by the method of computation which we have already noticed as that by which the numbers of the inoculated and uninoculated in each of the three series of inoculations in Daman were computed from the preceding series. In one of the cases where this is not so—on the 4th August—the discrepancy is probably due to a clerical error; in the other case—on the 5th August—there is a difference of one, and it is to be noticed that this same difference of one reappears in a comparison of the opening and final figures of the statement The number of the inoculated and uninoculated present on the last day of observation, added to the figures showing the total number of persons attacked during the outbreak, is one more than the figures showing the population on the first day of observation, two months before. It is, therefore, apparent that Mr. Haffkine's figures do not allow for any exodus of the population. But Mr. Haffkine admits that he had ascertained that "a certain number of inoculated and uninoculated" did leave the town during the period of observation, as they did also in the case of Kirki, which will next be considered. In view of this we cannot accept as accurate the figures laid before us, which have been based on computations and not on the "investigation sheets referring to each family separately" which Mr. Haffkine has in his possession.

26,535.

Apart from Mr. Haffkine's figures, we have had evidence with regard to the effect of the inoculations in Lanauli, laid before us by Major Richard Baker, I.M.S., who stated that he noticed that at Lanauli "in the place where inoculation had been made use of, the town was thriving and full of people," and the other part of the town was absolutely empty. . . . . One side had plague and the other had none."

160.

18,431.

So far as we are able to judge, therefore, on a review of all the evidence laid before us, we arrive at the conclusion that inoculation exerted a distinct preventive effect for the short time during which the epidemic lasted at Lanauli.

Inoculations at Kirki.

50. After the outbreak at Lanauli, the inoculations were tested at Kirki, a cantonment adjoining Poona. Mr. Haffkine states that "the group of people who were inoculated were the native followers of the four batteries of artillery stationed there. The total number of followers, including males, females and children, at the time of the epidemic was above 1,500. They lived in 27 Government barracks on an isolated maidan, or lawn, more or less away from the rest of the population, and were subject to a strict supervision during the whole time of the epidemic, on the part of all the military authorities and of a special medical staff. The inoculated and uninoculated belonged to an absolutely uniform class of the population. A large number of those inoculated were members of the same families as the uninoculated."

When at Poona we endeavoured to obtain further information with regard to the inoculations at Kirki from Colonel Fawcett, R.A.M.C., the Principal Medical Officer at Poona. This witness, however, stated that, owing to various reasons, the Medical Officer in charge at Kirki at the time had been unable to keep a proper record of the inoculations, so that he was not in a position to bring forward any facts.

21,973—21,981.

Mr. Haffkine, however, was himself on the spot, and personally with two assistants collected the information he had supplied to us. He was in Kirki, he says, "during nearly the whole of the epidemic, and was visiting the infected barracks and the Plague Hospital twice a day."

The following are the statistics regarding Kirki as tabulated by Mr. Haffkine :—

OCCURRENCES of PLAGUE in the FOLLOWERS of the FOUR BATTERIES at KIRKI (put together) between the 16th August 1897, and the end of September 1897.

DATE.	Number of uninoculated present	Attacks.	Deaths	Number of inoculated present	Attacks.	Deaths.	DATE.	Number of uninoculated present.	Attacks.	Deaths.	Number of inoculated present.	Attacks	Deaths.

28-29-8-97 .	804	4	2	749	—	—	20-21-9-97 .	733	2	—	737	—	—
29-30-8 97 .	800	3	3	749	1	1	23-24-9-97 .	731	1	1	737	—	
30-31-8-97	797	2	1	748	1	1	25-26-9-97 .	730	1	1	737	—	—
31-8-1-9-97 .	795	11	6	747	1	1	28-29-9-97 .	729	1	—	737	—	—
1-2-9-97 .	784	9	4	746	1	1							
2-3-9-97 .	775	3	2	745	1	—	Total .	—	143	98	—	32	17
3-4-9-97 .	772	3	2	744	—	—							
4-5-9-97 .	769	5	3	741	1	—							
5-6-9-97 .	764	6	3	743	2	—	Average daily strength	859	—	—	671	—	—
6-7-9-97 .	758	3	3	741	—	—							

A consideration of this table shows that in Kirki, as in Lanauli, for the greater part of the time during which the epidemic lasted after the introduction of inoculation, the value of inoculation can be calculated on absolute strengths. From the 26th of August to the end of the epidemic there were no fresh inoculations, and for this period there is no necessity to resort to a calculation on average strengths. For this period a calculation on absolute strengths gives the following results :—

Consideration of results at Kirki.

—	Number.	Attacks.		Deaths.		Case Mortality. Per cent.
		Number.	Per cent.	Number.	Per cent.	
Uninoculated . .	8.2	84	10·3	47	5·8	56
Inoculated . .	755	18	2·4	9	1·2	50
Diminution of mortality in favour of the inoculated . . .					4·6	

Mr. Haffkine, however, has calculated the number of attacks and deaths upon the average daily strength in order to compare the susceptibility to plague of the inoculated and the non-inoculated. The daily strength of the inoculated reached its average on the 24th August 1897. Before this date the number of attacks among the uninoculated amounted to 4·9 of their average strength for that period, while in the subsequent phase of the epidemic, 11·8 per cent. among them were attacked. In these circumstances, after taking into account the fact that the maximum number of the inoculated was reached soon after the beginning of the second phase, we might have expected that Mr. Haffkine's calculation would have slightly underestimated the effects of inoculation, inasmuch as the phase of the outbreak during which the inoculated exceeded their average strength was severer than the preceding phase. His calculation is as follows :—

—	Average daily Strength.	ATTACKS.		DEATHS.		Case Mortality. Per cent.
		Number.	Percentage.	Number.	Percentage.	
Uninoculated	859	143	16·6	98	11·4	67·8
Inoculated	671	32	4·7	17	2·5	53

It will be seen that this calculation gives a slightly lower value for inoculation than that obtained by the calculation on absolute strengths. The result is as close an approximation as can be expected in applying the compli-

cated method of calculating on averages to figures of an individual epidemic which are to a large extent the result of undetermined causes.

With regard to the trustworthiness of the data which are here in question, it is to be remarked that the figures in Mr. Haffkine's statistics, representing the numbers of the inoculated and the uninoculated, are arrived at by a method of computation similar to that which we have already noticed in the case of Daman and Lanauli. The errors which we have pointed out in the case of the Daman and Lanauli statistics are repeated here. Nevertheless, we have no reason to suppose that the summary of results would have been very materially altered if the figures of the daily strength of inoculated and uninoculated had been based on an actual census, instead of being arrived at by a computation, and, in these circumstances, we do not doubt that the inoculations exerted a beneficial influence in Kirki.

Inoculations among the Khoja community at Bombay. App. IV, 161.

51. We may now pass on to consider the case of the inoculations among the Khoja community of Bombay, regarding which Mr. Haffkine has prepared a special Report, reproduced in an Appendix to our Proceedings. The inoculations were begun on December 27th, 1897, and 33 persons were inoculated on that date, 33 on the 28th, 53 on the 29th, and so on, the inoculated on the last day of February numbering 4,719. During the following seven and a half weeks the number increased only by 465, and the total number of inoculations among the Khoja community in the first five months of 1898 was 5,184. The above were inoculated gradually, and the number includes Khojas who were re-inoculated during 1897-98, after having been previously inoculated in the outbreak of 1896-97. Khojas inoculated in 1897, but not re-inoculated in 1898, were, on the other hand, reckoned among the uninoculated. According to Mr. Haffkine's calculations, 8,146 remained uninoculated, and the average daily strength of inoculated people was 3,814 during the period covered by his Report, namely, from 27th December 1897 to 20th April 1898.

Mr. Haffkine's estimate of Bombay Khoja population and his statement of results of inoculation.

A census taken by the Khoja community in the beginning of 1898 showed the total community to consist of 9,350 people; but as, on account of the epidemic, a certain number of families may have been away when the census was taken, the above number, Mr. Haffkine thinks, is perhaps, not absolutely accurate. He, therefore, estimated the number of Khojas as follows:—
"The annual Khoja mortality in years free from plague, as registered in the burial-ground books of the Jamaat office, was:—

In 1892	385
" 1893	301
" 1894	335
" 1895	349

giving an average of 342 deaths in a year. The mean mortality of the population of Bombay is close upon 35 per mille per annum. Counting for the Khojas a mortality per mille per annum of 25 only, the average of 342 deaths a year gives a population of 13,680, which is likely to be higher than the actual number. During the epidemic of plague which preceded the 16½ weeks under consideration, the Khojas had 350 deaths in excess of their average mortality. The above number of persons in the community should, therefore, be reduced by 350, giving a population of 13,330."

Mr. Haffkine states that "during the 16½ weeks between the 27th December 1897 and the 20th April 1898, 184 deaths in all occurred in the Khoja community. Of these, six, including two of plague, took place in Khojas inoculated in the epidemic of 1896-97, and not re-inoculated since; seven deaths, including three of plague, occurred in the 5,184 Khojas inoculated or re inoculated in 1898; and 171 deaths occurred in the uninoculated Khojas. In the years 1892 to 1896, while there was no plague in Bombay, the mortality among the Khojas during the same part of the year, between the 27th December and 20th April, was 131, 96, 100, 103, and 96 respectively, or on the average 105, in a normal population of 13,680 individuals. In the reduced population of 13,330, as it stood at the beginning of the period under consideration, it should have been proportionately 102. The advent of the plague may have altered the course of the mortality, viz., the liability to deaths from other causes than plague, may have been influenced by the fact that, during the plague year preceding the period under consideration, double the usual number of individuals had been carried away by death. The normal mortality must have been also reduced by a

part of the community having left the city. Admitting, however, that, of the total number of 184 deaths (during the spring of 1898), fully the usual proportion of 102 died of other causes than plague, there remain 82 deaths in excess of that number which are attributable to plague alone; 64 of this number were actually acknowledged as plague deaths by the relatives of the deceased, or certified as such by the Khoja Jamaat books. Of the 102 deaths attributable to other causes 4 occurred in inoculated this year (1898), 4 in inoculated last year (1897), and the rest, 94, in uninoculated. Of the 82 deaths attributable to plague, 3 occurred in inoculated this year, 2 in inoculated last year, and 77 in uninoculated. After making such allowances as he thinks necessary for the correction of the figures, Mr. Haffkine himself claims "a difference of 89·7 per cent. of deaths from plague in favour of the inoculated part of the community, and of 73·3 per cent. of deaths from what has been returned as 'other causes' in favour of the same part of the community."

Critical examination of Mr. Haffkine's estimate of number of Bombay Khojas.

With regard to the figures which Mr. Haffkine has adopted as representing the total number of Khojas present when inoculations began, we note that he has designedly underestimated the rate of mortality used for his calculation, by assuming it to be only 25 per mille per annum, and that he has thus over-estimated the Khoja population and the number of uninoculated people comprised in it. This exaggeration of the uninoculated number brings out the percentage of plague incidence among them at an unduly low figure, and, therefore, operates to the disadvantage of inoculation in the comparison which Mr. Haffkine has made. Mr. Ismail Jan Mahomad, a Khoja medical practitioner in Bombay, who appeared before us as a witness, thought that there were in the City about 10,000 Khojas, of whom half had been inoculated. Moreover, a calculation upon the average mortality rate of the City, 35 per mille per annum, gives us an estimate that the Khoja community amounted to 9,770 persons. This figure closely approaches the result of the census of 1898.

Critical examination of statistics of mortality among Bombay Khojas.

In view of all the considerations which we have had before us, we have in the following calculations adopted as representing the total population of the Khoja community, the figure of 9,770 persons. Assuming, therefore, that the average strength of the inoculated Khojas during the period of observation was, as Mr. Haffkine puts it, 3,814, we arrive at an average strength of 5,956 for the uninoculated. If we distribute upon these strengths the deaths which are recorded in the books of the Khoja community, as having occurred during the period of observation from plague and from general causes, we arrive at the following results :—

——	Average Strength.	Deaths from Plague.		Deaths from General Causes.	
		Number.	Percentage.	Number.	Percentage.
Uninoculated	5,956	61	1	116	1·9
Inoculated	3,814	3	·08	4	·1

This table shows that among the inoculated deaths from plague were 12½ times less numerous, and deaths from general causes were 19 times less numerous than among the uninoculated. *Primâ facie*, therefore, it would appear that Mr. Haffkine's anti-plague inoculation protects against plague, but that it protects more against ordinary diseases. This result is so striking and so difficult to accept that we first addressed ourselves to the task of inquiring whether the inoculated were a picked body, and whether the uninoculated contained a large proportion of the sick and feeble, and of the very young and very old. Surgeon-General Harvey, I.M.S., who made a special personal inquiry into the results of the inoculations performed in the Khoja community, was of opinion that, in the main, the explanation of the disproportion between the deaths from general causes among inoculated and uninoculated Khojas must be sought in the assumption that in many families the sick, the weak, the elderly people, and the children, did not present themselves for inoculation, and that only the strong and healthy undergo the operation. In view of this opinion, we have tested the proportions in which the different age groups were represented among the inoculated and the uninoculated Khojas respectively. For this purpose we have made use of the figures given in Appendix I in Mr. Haffkine's Report, which we may presume to give with approximate accuracy the relative numbers of persons of different ages among the inoculated and the uninoculated Khojas.

We find that on the total number of Khojas present in March the percentages of children under seven, of old people of 61 years of age and upwards, and of persons of intermediate ages, respectively, were 19, 3½, and 77½ among the uninoculated, and were 16, 1½, and 82½ among the inoculated. These percentages indicate that, in point of age at least, the two communities were not sensibly incomparable. In view of these percentages the next point to determine was whether the excessive mortality from general causes assigned to the uninoculated was really due to excessive deaths in any particular class of the uninoculated community. To determine this we have made an examination of the details contained in Mr. Haffkine's Report. We have computed the average strength among the inoculated and uninoculated, of children under seven and of old persons of 61 years of age and upwards, upon the basis of the percentages of these persons that we have already noted as having been present in the whole Khoja community in March. Further, we have determined from the nominal rolls appended to Mr. Haffkine's Report, the numbers of deaths from general causes that were attributed to each of these classes of the community. Moreover, basing ourselves on Mr. Haffkine's statement that the rate of mortality from general causes for the period of the year at present under consideration has in a series of years closely approximated to the rate of mortality for the whole year, we have expressed the death-rates in the different classes in the form of a rate per mille per annum. Finally, on the basis of a death-rate of 35 per mille per annum, which is the average death-rate of Bombay, we have, for the purposes of comparison, added an estimate of the number of deaths which might have been expected on the average strength of the inoculated and uninoculated, respectively, if they had been in all respects comparable communities. The results of our calculations are set forth in the following table:—

—	UNINOCULATED.			INOCULATED.		
	Average strength	Recorded deaths from General Causes.		Average strength.	Recorded deaths from General Causes.	
		Number.	Rate per mille per annum calculated on the total average strength.		Number.	Rate per mille per annum calculated on the total average strength.
Children under seven	1,120	33	18	610	1	·8
Persons of intermediate ages	4,622	62	34	3,151	3	2·4
Old people of 61 and over	214	21	11	53	0	0
Total	5,956	116	63	3,814	4	3·2
Numbers of deaths that might have been expected at a death-rate of 35 per mille per annum	—	*61*	—	—	*41*	—

From this table it will be apparent that excessive mortality from general causes occurred in all three classes of the uninoculated community. The difference between the mortality assigned to the inoculated and the uninoculated will appear very clearly if we contrast the death-rates, which the mortality recorded in the different age-groups of the inoculated and uninoculated, gives on the average strength of these classes. While among uninoculated persons of 61 years of age and over, whose average strength was 214, the number of recorded deaths amounted to 21, giving a rate of 313 per mille per annum, no death whatever is recorded as having occurred among an estimated strength of 53 inoculated persons of similar age. The uninoculated children, whose average strength was 1,120, are reported to have lost 33, at a rate of 95 per mille per annum, while 610 inoculated children are reported to have lost only one, at the rate of 5 per mille per annum. In the case of the adults, ·,622 uninoculated are reported to have lost 62 by death, at the rate of 43 per mille per annum, while 3,151 inoculated are reported to have lost 3, at the rate of 3 per mille per annum.

In view of the facts that are thus summarised here, Mr. Haffkine sums up the case of the Khojas in his Report, as follows:—

Conclusions from figures regarding inoculations among Bombay Khojas.

"After making all allowances for inaccurate certi-

fication of deaths in the uninoculated group, with which the inoculated is being compared, and admitting that a part of the causes of deaths in the uninoculated may be due to a certain number of sickly people having abstained from inoculation, the result still contains an indication that besides the protection against plague, this inoculation influences also favourably the resistance to certain other diseases than plague." We find ourselves in agreement with Mr. Haffkine in holding that the difference in mortality among the inoculated and uninoculated cannot be fully accounted for, either by the excess mortality of the uninoculated children and old people, or by the incorrect assignment of plague deaths among the uninoculated to general causes. Such incorrect assignment, if it occurred unwittingly among the uninoculated, would have occurred also among the inoculated, and there was no room for it to have occurred among the inoculated. Therefore, there remains to be considered, of the explanations offered by Mr. Haffkine, only the suggestion that his anti-plague inoculation exercises a protective influence against diseases other than plague. This question is discussed elsewhere in this Report. We cannot, however, accept Mr. Haffkine's view that the low mortality among the inoculated can be accounted for on this hypothesis. It seems to us very probable, on consideration of all the circumstances, that the figures of mortality, which have been given above, must be accounted for by assuming that deaths which occurred among the inoculated were wrongly assigned to the uninoculated.

Results obtained in the Bombay Khoja community after period comprised in Mr. Haffkine's Report.

The period referred to in Mr. Haffkine's Report extends over 16½ weeks, namely, to the 20th April 1898, and Mr. Ismail Jan Mahomad has endeavoured to collect the figures of the mortality in the Khoja community from the 20th April 1898 to December 21st of the same year. He states that in the period in question out of 5,000 inoculated persons, 22 got plague, and 26 died of other diseases, while of a similar number of non-inoculated, 44 died of plague, and 218 of other diseases. In the books of the Khoja community, however, only four persons are entered as having died from plague. These books Surgeon-General Harvey told us "are extremely inaccurate as regards causes of death." Referring to these, he said: "Some of the entries are absolutely ridiculous." Mr. Ismail Jan Mahomad estimates at 22 the number of inoculated persons who died of plague, because, from his investigations, he is of opinion that some persons entered in the death register by the practitioners as having died of "brain-fever" had really died of plague. Further, he believes, that of the 218 uninoculated Khojas entered as having died from other diseases, 90, at least, had died from plague. It will be plain that no accurate conclusion can be drawn from statements like these, which are founded merely upon impressions. Asked how he accounted for the enormous mortality from general causes among non-inoculated people, as compared with the inoculated, Mr. Ismail Jan Mahomad advanced the same explanations as have been dealt with in reference to the period covered by Mr. Haffkine's figures, that sick and elderly people, as well as children, did not get inoculated. The criticisms made above regarding Mr. Haffkine's figures apply equally to the figures put before us by Mr. Ismail Jan Mahomad, and we need not discuss these in detail.

Feeling of Bombay Khoja community regarding inoculation.

We may note that the feeling of the Khoja community towards inoculation was the reverse of hostile. Surgeon-General Harvey told us that the Khojas have a most extraordinary belief in the efficiency of inoculation, so that many of them have been re-inoculated, some as often as five times. Inoculation among them was encouraged by their Chief, His Highness the Aga Khan. It is not impossible that religious belief and loyalty to their leader may have had a powerful influence in prepossessing the Khojas in favour of inoculation. A bias in favour of inoculation, like a bias opposed to it, is, especially in an Indian community, not unlikely to result in the intentional or unintentional production of one-sided statistics.

Nevertheless, quite apart from the statistics put before us, which we think inaccurate, we do not doubt that inoculations had a good effect, inasmuch as much weight must be allowed to the opinions of a community so intelligent as that of the Khojas regarding the practical effects of Mr. Haffkine's prophylactic fluid as tested by them in the presence of plague.

52. We may proceed now to discuss the test to which inoculation was submitted in the Umarkhadi Common Jail at Bombay. Before inoculation was offered to the prisoners, three cases, all fatal, occurred in this Jail, namely, two on the 31st December 1897, and one on January 1st, 1898. On January 1st the 402 prisoners present in the jail were questioned as to their willingness to be inoculated. It was understood that all consented to undergo the operation. They were then paraded, and every second man or woman, without distinction, was picked out for inoculation. When their turn came, two persons refused to be inoculated. Thus out of the 201 to whom it was offered 199 prisoners were inoculated. The conditions of life of the inoculated and uninoculated prisoners were so arranged that there should not, in Mr. Haffkine's words, "be a single circumstance constituting a difference in the condition of the inoculated and uninoculated."

Inoculations in Umarkhadi Common Jail.
69.

In considering this outbreak, we may confine our attention to the cases of plague which occurred among the prisoners present in the jail at the time of inoculation, though some other cases occurred among prisoners subsequently admitted. The course of the outbreak, so far as it concerns us, is thus stated in Mr. Haffkine's words:—"The plague continued for about a month; and on 11 different days there occurred 13 cases. During that month a certain number of prisoners were discharged, and others admitted to the jail. Taking day by day the number of inoculated and uninoculated who remained in the jail during that month of plague, from the original group of 402 prisoners, the average daily strength of the inoculated appears 147, and of the uninoculated 127. The number of inoculated who stayed in the jail all through the epidemic was therefore larger by about one-seventh than that of the uninoculated. All the 13 cases of plague occurred among the prisoners of *the original group* who were present in the jail on the day of inoculation. . . . Therefore the distribution of the cases of plague among the inoculated and the non-inoculated represents the distribution of the two original absolutely comparable groups of people which I have described. Ten of the 13 cases were among the smaller number of the uninoculated, and six of these ten died. There were three cases amongst the larger number of 147 inoculated, and all three recovered." These statements are borne out by the official figures with which we have been supplied, except on two points, which do not affect the general results of the statistics. The first of these is that plague continued for more than a month, as will be apparent from the dates of attack given below. The second point is, that in the official figures the number of cases among the uninoculated is given as nine (with five deaths) instead of ten (with six deaths). Mr. Haffkine has explained that the extra man included in his figures was one who was present when the inoculations were performed, but was attacked with plague immediately afterwards, and we think that, in view of this fact, it would be well to exclude this case from consideration, as he had already contracted plague before the inoculations were done.

Results of inoculations.

The dates on which plague cases occurred in the jail after inoculation are of interest. Among the groups of inoculated and uninoculated prisoners with whom we are dealing, no cases at all occurred in the interval from the 1st to the 16th January. On the 7th January the whole of the convicts had been turned out of the buildings, in which the original three cases had occurred, and were made to sleep in the open for from 10 to 15 days. In the 14 days dating from the 17th January to the end of the month there occurred among the uninoculated 8 of the 9 cases we have referred to above, while no cases occurred among the inoculated. On the 2nd February there occurred the last of the cases among the uninoculated. The three cases among the inoculated then occurred, the first on the 10th February, the second on the 28th February, and the third and last on the 18th March. We find that the average monthly strength of the inoculated and uninoculated prisoners of the original groups was 92 and 99 respectively during the months of February and March. Thus the incidence of plague in these two months was three times as great in the inoculated as it was in the uninoculated. This, however, must not be allowed to obscure the important fact that, during the whole period of the outbreak, the number of attacks among the inoculated was only one-third of the number among the uninoculated, and that the disease among the inoculated was remarkably mild, resembling mumps more than plague, though the cases among the uninoculated were of average severity.

Surgeon-General Harvey's account of the inoculations at Undhera. 69.

53. The last of the examples of the effects of inoculation which Mr. Haffkine personally investigated, was that of Undhera. Surgeon-General Harvey, the Director-General of the Indian Medical Service, submitted to the Government of India a report upon this case, from which we may quote the following narrative of the course of events:—"Undhera, a village about six miles from Baroda, was attacked by plague in January 1898. On the 5th February a careful census was taken and showed a population of 1,029. Up to and inclusive of 14th February, 79 plague deaths occurred, leaving 950 people to be dealt with. Of these 513 were inoculated, leaving 437 uninoculated. As far as possible an equal number of each sex, age, and family, was done, and as all were living under precisely similar conditions as to sanitary surroundings, food, drink, clothing, etc., the case is the best and most conclusive example yet available of the result of inoculation. Except for the inoculations, all were on the same footing, and the disease had got a thorough hold of the place. The usual sanitary precautions as to segregation and disinfection were carried out, all plague cases being removed to hospital, and every effort made to combat the disease in the usual way. The inoculations were done on the 12th (February), but the following figures are taken from the 15th, so as to eliminate cases incubating plague at the time of the inoculations. Three deaths occurred among the uninoculated between the 12th and 14th inclusive, none among the inoculated. These three deaths, together with two others which might possibly have been due to diseases other than plague, have been eliminated, so that no exaggeration as to the effect of the inoculation may be possible. The results up to the 2nd April (1898) are as follows, but no case occurred after the 28th March (1898), so that we are probably dealing with a finished epidemic. Between 15th February and the cessation of the disease plague cases occurred in 29 families, living together as already said under exactly similar conditions, save that some were, and others were not, inoculated. These 29 families comprised 135 individuals of all ages, 71 of whom had been inoculated and 64 not. The 71 inoculated had eight cases with three deaths, while the uninoculated had 28 cases with 26 deaths. Had the inoculated been as susceptible as the uninoculated, they should have had 29 deaths instead of three, and the inference seems irresistible that the inoculation saved 26 lives out of this small number, or 89.65 per cent. Taking the whole number inoculated, 513 had eight cases or 1·56 per cent., and three deaths, or ·58 per cent., while the 437 uninoculated had 28 cases or 6·4 per cent., and 26 deaths or 5·9 per cent., just 10 times as many. The protective influence of the inoculations is brought out still more strongly in some particular instances. Thus, in hut 84, ward 4, five persons were inoculated and five uninoculated in a family of 10. The five inoculated remained healthy, while two of the five uninoculated got plague and died. In hut 18 of the same ward three inoculated persons remained healthy, two uninoculated died out of a family of five. In hut 26, also in ward 4, one inoculated person escaped, two uninoculated died out of a family of three. In hut 8, ward 1, four inoculated persons escaped, while the one who remained uninoculated contracted the disease and died. In hut 24, ward 2, out of a family of two, the inoculated member escaped, the uninoculated died. In hut 20, ward 3, one of the three inoculated contracted plague, but recovered, while one of the four uninoculated got it and died. In two out of the three huts where fatal cases occurred among the inoculated, a death also occurred among the uninoculated, and in only one instance in the whole did a fatal case occur among the inoculated, while the uninoculated went free. This was in hut 31, ward 4, where one of four inoculated contracted and died of plague, while two uninoculated escaped. These figures have been verified by Surgeon-Major Bannerman, Madras Medical Service, Surgeon-Captain Dyson, Bombay Medical Service, Mr. Haffkine, and myself, case by case and family by family, and seem to me to prove that while inoculation as at present practised is not an absolute protective either against seizure or death, it is of immense value both as a prophylactic and as modifying the severity of the disease and reducing the case mortality. This was 37·5 per cent. among the inoculated, against 92·85 per cent. in the uninoculated."

Statistics relating to Undhera.

We add here, for convenience of reference, a tabular statement of the results recorded in Surgeon-General Harvey's Report:—

—	—	Strength.	Attacks.		Deaths.		Case Mortality per cent.
			Number.	Percentage.	Number.	Percentage.	
Whole Village.	Uninoculated .	437	28	6·2	26	5·9	93
	Inoculated . .	513	8	1·5	3	0·6	38
Houses in which plague occurred.	Uninoculated .	64	28	43·8	26	40·6	93
	Inoculated . .	71	8	11·5	3	4·2	38
Diminution of mortality in population of whole village . . .						5·3	
„ „ „ plague infected houses . .						36·4	

With regard to the methods by which the above statistics were compiled, we may note, in the first place, that the strength of the uninoculated appears to have been ascertained not by a direct enumeration, but by a computation. The census of the village, according to Mr. Mehta, the medical officer who was in charge of plague operations in the Baroda State, was taken on the 5th January 1898, not on the 5th February. Mr. Mehta has made two statements of the population ascertained, both of which differ slightly from the figure given by Surgeon-General Harvey; the difference is not important. The census population was brought up to date when the inoculations were performed by a deduction for persons who had died or left the village, and an addition for births. Different statements have been laid before us as to the number by which the population had actually declined between the date of the census and the date of the inoculations; but the differences are small, and may be neglected. With regard to the mortality which occurred after inoculation, we may note that the keeping of the records and the diagnosis of the causes of death, was the work of the native Hospital Assistant or Apothecary who was present in the village. This work was checked, as has been indicated above, by a house to house enquiry by Mr. Haffkine, Surgeon-General Harvey, and other officers. These officers came to Undhera on April 2nd, 1898, went into all the houses, and, with the help of a census paper, controlled the statistics.

4046, 4048.

Criticism of Undhera experiment.

Attached to Mr. Haffkine's Report on Undhera will be found a series of investigation sheets which give in detail the composition of each of the 28 families (not 29 as stated by Surgeon-General Harvey), in which plague occurred, and the occurrences of plague in it. We have scrutinised these investigation sheets to control the statements made regarding the comparability of the inoculated and uninoculated in Undhera, and we find that the proportions of the various ages and sexes were evenly distributed among the two classes. The correctness of Mr. Haffkine's figures is further confirmed, after making allowance for the deaths excluded by him from his calculations, by figures separately given to us by Major Bannerman and Mr. H. D. Mehta. The experiment at Undhera appears to us to be the most important experiment regarding the effect of anti-plague inoculations that has as yet been carried out. It is important, because firstly the inoculated and uninoculated persons under observation were fairly numerous, while their numbers were determined with a considerable degree of accuracy; secondly, because the communities of the inoculated and the uninoculated were comparable, and lived under similar conditions; thirdly, because the communities were equally exposed for a period of six weeks to an outbreak of plague which carried off 6·2 per

cent. of the uninoculated; and, lastly, because the results set down by the Native Hospital Assistant were checked in the manner described above. The only point which seems calculated to arouse a doubt as to the trustworthiness of the results recorded is the fact that 27 out of 28 persons attacked are said to have died. This certainly is an astonishing mortality, and might be taken as indicating that the village records are seriously inaccurate. If, however, we assume—and, with the exception of Dr. Ruffer, who thinks that the records cannot be accepted as accurate, we do make the assumption—that the checks applied on the spot were sufficient to ensure the detection of really gross errors, then we may deduce two lessons from the Undhera experiment. Firstly, we learn that the number of plague attacks among the uninoculated is much larger than among the inoculated: in this particular case, as the table given above will show, plague attacks were proportionately four times more numerous among the uninoculated than among the inoculated. The second lesson we learn is that the percentage of deaths among the attacked is very much higher among the uninoculated than among the inoculated; in this particular case, as the table again shows, the percentage of deaths among the uninoculated was proportionately 10 times as great as among the inoculated. An indication which is afforded by the figures for Undhera with respect to the duration of the immunity conferred by inoculation, will be referred to in a subsequent portion of this Report. A fact which invites notice in the table given above is the large percentage of the inoculated who suffered in the houses brought into the investigation sheets, as compared with the percentage who suffered in the village as a whole. We cannot, however, in this case, as in the case of some of the houses in Daman, conclude that this high percentage is referable to the greater liability of inoculated persons to contract plague when they are living in infected houses. It would appear that only one of the eight inoculated persons attacked was attacked in a house in which there had already been a case of plague. Therefore the percentage of attacks among the inoculated residents of the infected houses in Undhera is not a trustworthy index of the liability of inoculated persons to contract plague in infected houses.

Inoculations at Hubli.

51. The preliminary experiments which we have discussed above had afforded sufficient proof of the efficacy of inoculation to induce the authorities to take advantage of a serious outbreak of plague at Hubli in May 1898 for testing the value of inoculation on a large scale as a plague measure. We had an opportunity of examining many of the persons employed in this work, more especially Mr. Cappel, the Collector of the district, and Captain Leumann, I.M.S., who had been in charge of the operations.

Hubli was one of the first towns in India where an attempt was made to combat plague by the inoculation of the whole population of an infected place, and we have therefore to carefully consider the results obtained. Every effort was made to encourage inoculation, and, in particular, re-inoculation, both by the application of a great deal of moral persuasion and also by the grant of certain material advantages to inoculated persons. The policy adopted was to relax in favour of the inoculated the severe plague measures which were enforced with regard to the non-inoculated. The uninoculated inmates of houses in which plague cases occurred were taken to segregation camps, and were detained there for 10 to 15, and at one time 18, days; uninoculated persons living in an infected quarter were liable to removal to health camps; uninoculated persons, whether removed originally to segregation or to health camps, were not permitted to return to live in the town unless they became twice inoculated, even though their houses and effects had been disinfected; uninoculated persons could not leave Hubli by rail, and an attempt was made to prevent them leaving by road, and such as got away were liable to detention at other places. Persons once inoculated were treated in these respects like the uninoculated, and a single inoculation was regarded merely as a step to securing the advantages of double inoculation, without which the district authorities were not satisfied that protection was conferred. The twice inoculated, on the other hand, were not segregated except during the time necessary for the disinfection of their property and houses, and were sometimes allowed to re-occupy their houses on the same day as that on which they were removed from them for their disinfection; and the twice inoculated were freely granted passes which enabled them to leave Hubli, and to a large extent guaranteed them against restrictions on travelling in other districts. The result to be expected was attained and a very large number of the people became inoculated, all but a small part of the inoculated submitting to the operation twice. As the work

proceeded statistics regarding its progress and effect were collected, which have been put before us by Mr. Cappel in his evidence, and by Captain Leumann in a report which he wrote upon the inoculations at Hubli. The object of these statistics is presumably to permit of a calculation of the exact measure of advantage which was gained from inoculation, and Captain Leumann in his Report does, as a matter of fact, work out numerical statements on which he bases a claim that in respect of plague mortality the advantage in favour of the twice inoculated over a period of seven successive weeks amounted to more than 95 per cent.

Mr. Cappel's statistics regarding inoculations at Hubli.

The table which was furnished to us by Mr. Cappel as a corrected record of the statistics contains figures for each week commencing with that ending on the 17th June 1898. Details for weeks preceding that week are not given, as inoculations were commenced on a large scale only in the middle of May, when the outbreak of plague began to assume serious proportions. The statement is as follows :—

Weeks ending	Population for the week.	Inoculated. Once.	Twice.	Total.	Uninoculated.	Attacks in Once inoculated.	Twice inoculated	Total inoculated	Uninoculated.	Total.	Deaths in Once inoculated.	Twice inoculated.	Total inoculated.	Uninoculated	Total.

* The rising figures represen. new comers.

These figures are summed up by Mr. Cappel in a statement that the percentage of the total plague-deaths in Hubli was 7 per cent. on a population taken, for the period covered by the statistics, as 42,000. Of the total plague deaths $\frac{3}{70}$ths are assigned to the once inoculated, $\frac{6}{70}$ths to the twice inoculated, and $\frac{61}{70}$ths to the uninoculated.

The figures in this statement are not the same as those given by Captain Leumann in his Report, but this is to be expected from the fact that Captain Leumann's Report refers to weeks that ended three days before the weeks adopted by Mr. Cappel. Mr. Cappel, however, has informed us that his figures have been reconciled with those of Captain Leumann, and it will therefore suffice for us now to confine our consideration mainly to Mr. Cappel's corrected table which we have printed above.

Criticism of Hubli figures.

Four sets of figures are essential in every case in which a numerical estimate is to be formed of the relative immunity of the inoculated and the uninoculated. These are the total numbers respectively of the inoculated and the uninoculated comprising the population under observation, and the totals of attacks, or, as the case may be, of deaths, in each of the two categories of inoculated and uninoculated respectively. Mr. Cappel's statement purports to give accurately the four sets of figures required, and we have therefore now to consider the extent to which the figures

are reliable and capable of use in calculating the exact advantage obtained by inoculation in Hubli.

Method of collecting information in Hubli.

A census of the town was taken under the directions of the Collector some time after the plague had commenced in October 1897. This census forms the basis of the statistics which were collected during the subsequent course of the epidemic. A procedure similar to that adopted for taking the Imperial Census of 1891 was followed, and, though Europeans were not especially employed to supervise it, we have no reason to doubt that the census of 1897 gives a fairly accurate estimate of the number of people present in Hubli at the time when it was taken. The population was found to be near that ascertained in 1891, but we are not in possession of exact information regarding this point. The census was thoroughly revised when plague began to get bad, and from that time onwards an attempt was made to keep it up to date, and to check, by a weekly revision, the fluctuation in the population which was caused by the movements of the people. To facilitate the revision, the town which contained about 12,000 houses was divided into sub-divisions and wards, each of the latter having from 90 to 120 houses in it, and being under the charge of a supervisor. On a fixed day every week it was the duty of the supervisor to visit every house in his charge, and to check and correct for each house the entries which stood in his sencus books regarding it. In addition to his weekly visit the supervisor was instructed to make daily inquiries in his ward, and to note the names of all persons arriving in or leaving the ward, and all information which could be gathered regarding the distribution of the people between inoculated and uninoculated, and regarding the occurrence of plague attacks and deaths among these classes. The weekly visit was intended for a thorough revision of the information collected day by day, and the supervisor was instructed to call out and actually verify the presence of all persons living in the house at the time of his visit, and, after inquiry, to make appropriate entries in his census book against the names of all previously recorded inmates who were found to be absent. The weekly revisions of the ward lists finally reached the Chief Plague Officer, and were used by him for a compilation of the population of the whole town.

Criticism of method of collecting statistics at Hubli, and notice of certain discrepancies of minor importance.

Before passing on to criticism of the statistics thus collected, it will be well to note certain points with regard to the agency employed in collecting them. Most of the supervisors at one time were volunteers; the work of revising the census was rendered difficult at the most important time by panic due to the fear of the plague; some of them ran away and had to be replaced; during the rains it was difficult to keep them up to their duty; and only one European officer was available to supervise and control the proper working of the organisation.

In some weeks the statistics compiled are obviously wrong as the figures stand in Mr. Cappel's table. Thus, the numbers of the inoculated and uninoculated population added together do not in the case of four weeks—those ending on the 23rd and 30th of September, and on the 14th and 21st of October—correspond with the total population of the town. Indeed, in the last of the weeks just referred to, the number of the inoculated alone is stated to be 40,049, though this is in excess of the total population, which is given as 39,953 only. We are, however, not disposed to lay much stress on points like this as arguments to show that the figures actually returned by the supervisors were wrong. The discrepancies we have pointed out may be due to simple clerical errors, as is perhaps indicated by the repetition of the number for the preceding week in the case of the total population on the 23rd September, and by a similar repetition in the case of the uninoculated on the 21st October. It is sufficient simply to mention these discrepancies.

Criticism of estimate of uninoculated population of Hubli.

Much graver doubts regarding the accuracy of Mr. Cappel's statistics are awakened by the fact that in the table he originally gave us the plague mortality of the uninoculated, calculated on the census figures, amounted to 20· per cent. in a period of eight successive weeks,—a plague mortality unprecedented in any urban community in British India. Though in the revised table put before us the

plague mortality among the uninoculated has been brought down to 20 per cent. in a period of 30 successive weeks, still we think that this mortality, in a small community of uninoculated persons, interspersed among a large number of protected persons, is so large as to make it incumbent upon us to examine the figures very carefully. The first important point to be considered is the accuracy of the figures representing the respective numbers of inoculated and uninoculated people in the population. The latter had every reason to avoid getting themselves registered on the supervisors' census lists. We have already described the policy which was adopted towards them, and a reference to what we have said on the subject will explain that concealment on their part was only to be expected. That they did endeavour to hide themselves is proved by the evidence of Lieutenant Keelan, who directly supervised the census operations; he allowed that when a plague officer appeared, uninoculated persons escaped through the back door. That the error among the uninoculated may have been considerable, and is in reality indeterminable, is indicated by the estimates formed of the maximum number of uninoculated people in the town by various witnesses. The minimum number given in the table is 200, while for 14 weeks the table shows that less than 5,000 uninoculated people were in the town, their numbers being given as under 2,000 from the week ending on the 16th September to the last week for which we have a record. Mr. Cardoz, a medical officer employed in Hubli during the outbreak, gave us his opinion that the minimum number of uninoculated never fell below 6,000 or 8,000. Lieutenant Thomas, who was engaged in disinfection duties in the town, thought that the uninoculated population was about 5,000, and that it did not go below 5,000. His statement, however, like that of Mr. Cardoz, can only be accepted as showing that the general impression left on the minds of officers on the spot was that the census gave an incorrect idea of the number of the uninoculated. Lieutenant Keelan, who was directly responsible for the control of the census operations, was in an exceptionally good position to judge. He, speaking of the middle of September, when Mr. Cappel's figures put the numbers of the uninoculated at 1,116, stated, "I should have said by the figures I had then that there were about 3,000 or 4,000 who had not been inoculated." In answer to another question, however, Lieutenant Keelan said that "the census which was sent in was really correct for each division to within 50 or 100." Inasmuch as there were, we understand, about 10 divisions, this, we may note, would give us a much lower estimate of the number of the uninoculated present in the town than that of 3,000 to 4,000 quoted above. But inasmuch as the error would be proportionately greater among the uninoculated than among the inoculated, the statistics regarding them would be seriously vitiated even by an error of 50 to 100 in the enumeration of each division.

Criticism of estimate of inoculated population of Hubli.

The case of the inoculated differed materially from that of the uninoculated, for they had every reason to get themselves recognised as inoculated, and doubtless took care to be registered upon the census. The doubt in their case is that the census rather exaggerated than understated their numbers. As we shall show later on, the Indian public has generally resorted to inoculation to escape other plague measures. The chief value of inoculation, from their point of view, is not the protection it affords They have, therefore, been anxious to use devices to get the privileges of inoculation, without undergoing the pain and inconvenience of the operation. With a subordinate agency like that usually available in India (and we have evidence that in connection with disinfection the subordinate agency in Hubli itself was actually found to be open to bribery), we cannot exclude the possibility of persons being able to induce census supervisors to enter them improperly as inoculated. A few instances came to the notice of the authorities in which personation was resorted to for the purpose of obtaining the desired privileges. Certificates of inoculation had, it is believed, a marketable value. On the one hand, certificates of single inoculation were occasionally transferred to assist the persons who became possessed of them in obtaining the privileges of double inoculation after undergoing the process only once. On the other hand, certificates of double inoculation were occasionally transferred in order that the privileges desired might be thus obtained without any personal inconvenience. We have, however, no reason to suppose that the census

M

figures of the inoculated were to any considerable extent inflated by the addition of persons who improperly obtained certificates of inoculation; the evidence, in fact, points the other way.

Criticism of statistics relating to plague occurrences in Hubli.

So far we have dealt with the statistics regarding the distribution of the population into the classes of inoculated and uninoculated. In passing on to a consideration of the information supplied to us regarding plague attacks and deaths, we may repeat the fact, which has been already noted above, that the authorities depended for this information upon the same inefficient agency as we have described in criticising the general accuracy of the census. Moreover, difficulty in the collection of accurate information was experienced because the discovery of plague in a house was necessarily followed up by the application of the prescribed plague measures. The patient, if alive, was removed to hospital; the inmates of the house were segregated; the house was disinfected and unroofed. The milder measures adopted in the case of inoculated persons were still such as to cause considerable inconvenience. Hence there was great inducement to concealment of plague. That the agency employed to collect information regarding the occurrence of plague was unable to successfully defeat this concealment is proved by the fact that, during the most important period of the outbreak which is covered by these statistics, it was only in rare instances that plague cases were discovered during life. To conceal the occurrence of deaths, however, appears to have been a matter of considerable difficulty, inasmuch as the removal of all dead bodies was prohibited until they had been inspected by medical officers appointed for the purpose and a death certificate had been issued. But in spite of these rules, deaths also were concealed. An instance of this is the case incidentally referred to by Lieutenant Thomas, the Chief Plague Officer at Hubli, in connection with his evidence regarding disinfection. He referred to the case of a house in which, out of 13 inmates, nine, having died of plague, had been buried surreptitiously before information reached the authorities. In such a case it may be doubted whether the people who had died were on the census at all, and whether the deaths when discovered would be correctly classified as inoculated or uninoculated. The principles on which classification was ordinarily made were as follows: When a death came to the knowledge of the authorities, the medical officer appointed for the purpose proceeded to make an inspection of the body. He had first to determine whether the death was or was not due to plague. Very considerable difficulty appears to have been experienced in many cases in arriving at a correct conclusion, even when the inspection was made by experienced European medical officers, and in the earlier part of the epidemic, when time was available, it was found necessary to have resort to post mortems and bacteriological examinations. Later on, however, when the epidemic was at its height, the task of examining bodies was committed to Assistant Surgeons and Hospital Assistants, and we cannot doubt that many erroneous diagnoses may have been made. A decision as to the cause of death, whether right or wrong, having been arrived at, the next point to determine was whether the deceased belonged to the class of the inoculated or of the uninoculated. Inquiries were made from the relatives and a search was instituted for a certificate of inoculation. When a certificate was found or the body of a person identified showed signs of inoculation by the existence of a nodule on the left arm, the deceased was classed as inoculated. When the body of a known person showed no signs of inoculation, and no certificate was forthcoming, the statements of the relatives were accepted, unless on consulting the register of inoculations there appeared to be grounds for doubting these. When the body was that of a person not identified, and nothing could be found out about it, the classification of the death as that of an inoculated or uninoculated person depended upon the proportion in which the inoculated and uninoculated were represented in the population. This is the statement of Captain Leumann, I.M.S.; but, on the other hand, the statement of Assistant Surgeon Cardoz, who was temporarily employed on this particular duty, is that unless a certificate of inoculation was found on a body or was produced by the friends, the deceased was considered to have been uninoculated. Mr. Cardoz added that there was no inducement for the friends to produce certificates. This we can well believe, for as we have already pointed out, certificates were occasionally

transferred by sale to uninoculated persons, and relatives may have sometimes been unwilling to part with certificates on account of the importance which is attached in India to the mere possession of such documents. In cases where certificates were not forthcoming, it seems to us to have been practically impossible to get evidence of inoculation, as the local induration resulting from inoculation would rapidly pass off, and even if the patient's name was known—which, from Captain Leumann's Report, appears to have been the case with reference to all but 5 per cent. of the dead examined in Hubli—it would be an extremely difficult and laborious task to trace a particular case of inoculation in unindexed registers, to which from 500 to 800 entries were added daily by an inadequate staff. We see, therefore, that the statistics of deaths are liable to a considerable error.

No exact arithmetical estimate of amount of protection conferred by inoculation can be obtained from Hubli figures.

To sum up, then, we have seen that each of the four data which are essential to a correct estimation of relative immunity may be inaccurate. It is possible that the number of the inoculated has been over-estimated, and it is almost certain that the number of the uninoculated has been understated. Moreover, the number of deaths—to say nothing of the number of attacks—assigned to plague is inaccurate, and in the attribution to the inoculated and the uninoculated of deaths assigned to plague there is almost certainly further error. We, therefore, cannot but conclude that it is absolutely impossible to arrive at any exact arithmetical estimate of the relative immunity of the inoculated and uninoculated, and that the estimate put forward by Captain Leumann cannot be accepted as correct.

Comparability of inoculated and uninoculated in Hubli.

We have, however, to consider whether it would not be possible to work out from the figures some approximate expression for the amount of protection afforded by inoculation at Hubli. It would be possible to do this if the errors in the statistics which we have referred to above were not such as to seriously affect the results when expressed in percentages, and if the communities of the inoculated and uninoculated could be regarded as comparable from the point of view of general health. To enable us to come to a conclusion regarding the comparability of the communities we can make use of figures with which we have been supplied by Dr. Winter. These figures relate to the number of deaths from general causes which took place among the inoculated and uninoculated respectively. We learn from them that in the period of 30 weeks, from the 12th May to the 29th November, the uninoculated lost 646 by deaths due to general causes, while the inoculated lost 74 only. We cannot work out from these figures the exact annual death-rate, for we do not know the census figures of the population for the first four weeks included in Dr. Winter's period. But Dr. Winter's figures, taken upon the average strength of the inoculated and uninoculated for the rest of his period, give us a mortality rate from general causes of over 80 per mille per annum among the uninoculated and of only four per mille per annum among the inoculated. It is not open to us to assume that deaths among the uninoculated which were assigned in Dr. Winter's figures to general causes were in reality unrecognised plague deaths. We are excluded from making this assumption, because, as we have pointed out above, the number of plague deaths already assigned to the uninoculated is so large as to awaken serious doubts as to its accuracy. We must therefore take Dr. Winter's figures as foreclosing the question of the comparability of the two communities from the point of view of general health. The conclusion that the communities were incomparable is borne out by a consideration of the process of selection which operated in the direction of excluding certain classes of unfit persons from the inoculated community. Candidates for inoculation were often rejected on account of age, disease, and advanced pregnancy. In a town which just before the outbreak of plague had 58,000 inhabitants, the whole body of the uninoculated, when their number was at or near its recorded minimum of 200, must have consisted entirely of persons of the rejected classes. It is precisely during this period that the errors pointed out above in the enumeration of the uninoculated population and in the assignment of plague deaths to the uninoculated must have most seriously vitiated the statistics. On the other hand, a consideration of Mr. Cappel's table shows that during a considerable portion of the period covered by his

statistics the numbers of the uninoculated were large. During this period the effect of the errors due to the incomparability of the inoculated and the uninoculated, and to defects in the collection of the statistics cannot, we think, have been large enough to vitiate deductions from the figures expressed in the form of percentages. From this opinion, one of us, Dr. Ruffer, dissents, and he thinks that no useful arithmetical estimate of the value of inoculation at Hubli can be made.

Approximate estimate of effects of inoculation at Hubli, and general remarks.

We think that it may be possible to draw some approximate inference from the figures in Mr. Cappel's table, provided we exclude the figures after those for the week ending on the 19th August, after which time the numbers of the uninoculated were small. Moreover, we must exclude also the figures for the earlier weeks included in Mr. Cappel's table. This will be manifest when we consider that the population, which we should here have under consideration, would consist first of two groups of 5,588 and 10,685 persons respectively, who are continuously included (during the period from the 18th June to the 19th August inclusive) in the respective classes of the inoculated and uninoculated, and secondly of a group of some 24,200 persons who are included in the first weeks of the period among the uninoculated and who gradually pass over to the inoculated and are at the end of the period all included among the inoculated. Now, inasmuch as plague was only beginning to gather strength in the earlier part of the period, it will be manifest that this group of 24,200 persons must have been brought more frequently in contact with infection in the latter weeks than in the earlier weeks. Hence the number of cases might have been expected to be greater among these 24,200 people in the later than in the earlier period. Therefore the number of cases which did actually occur among this group in the second period, when they are included in the inoculated, will not, when compared with the number of cases that occurred among them in the first period, when they were included among the uninoculated, give a full measure of the value of inoculation. With a view to eliminating the source of error that would thus [illegible] be introduc[illegible] have taken as the basis of our comparison only the figures which have been supplied for the period from the 16th July to the 19th August. The comparison thus worked out covers the period which begins when plague became severe, and which ends when the comparability of the inoculated and uninoculated begins to be seriously doubtful. The comparison is as follows :—

—	Average Strength.	Number of Plague Deaths.	Percentage of Deaths on Average Strength.
Uninoculated	20,225	980	4·8
Inoculated	22,967	118	·5
Diminution of mortality in favour of inoculated			4·3

According to this table it would appear that 987 lives were saved in Hubli during five weeks. Even if the saving is considerably exaggerated by this calculation, it is still quite clear that a very large number of lives must have been saved in Hubli by inoculations during the whole course of the epidemic there. Moreover, we may note that an arithmetical estimate is not the only criterion by which we can appreciate the value of inoculations. And in Hubli their value is approved by the consensus of opinions of officers who have seen probably far more of this process and its results in practice than any other persons in India, and who, having every facility for forming a sound judgment as to its effect where plague was really virulent, are satisfied as to its great value.

In addition to the results of endeavours made to obtain an exact estimate of the benefits accruing from inoculation to the whole town, two series of data are before us from which it might appear possible to form such an estimate for parts of the town separately. These data relate to the results obtained by inoculation in ceratin selected houses in Hubli and among the employés of the Sout ern Mahratta Spinning Mills.

Captain Leumann's investigation sheets for Hubli.

The former series is accessible to us in a set of 69 investigation sheets which Captain Leumann has appended to his report on Hubli. The results are striking, for out of 336 inoculated persons inhabiting the houses to which the investigation sheets related, only 11 were attacked, and 4 died, whereas of 144 uninoculated persons 84 got the plague, and 80 died. The mortality among the inoculated was 1 per cent. and the attacks 3 per cent., giving a case mortality of 33 per cent.; whereas among the uninoculated inhabitants the percentage of attacks was 61 per cent. and the mortality 57 per cent., giving a case mortality of 94 per cent. The uninoculated people in these plague houses, therefore, suffered far more severely than the inoculated. But only a very small minority of the plague deaths among the inoculated in the town occurred in the houses in question. For Lieutenant Keelan, who collected 200 cases from which most of the 69 published in the Appendix were selected by Captain Leumann, stated that his 200 selected houses did not contain all the houses in which inoculated and non-inoculated people lived together, and in which plague cases had occurred. His instructions were, he said, " to get good cases, houses where several had been inoculated, and one or two had not been inoculated. There were a lot of houses where, perhaps, one person had not been inoculated, and the others had, and those I should call good cases where only one of the uninoculated got the disease." It is to be understood, however, that Lieutenant Keelan did not reject houses because of the result not being so favourable, but simply that he kept a special look-out for what he called good cases. We are unable to attach any importance to any numerical results deduced from these investigation sheets, for the reason that it is admitted that the houses were subjected to a double process of selection, first by Lieutenant Keelan, and then by Captain Leumann. While they have no statistical value, they are of interest as quite special examples of successful inoculation.

Inoculations in the Southern Mahratta Spining Mills, Hubli.

Captain Leumann states that in the Southern Mahratta Spinning Mills a saries of inoculations was carried out at the express wish of the Manager, Mr. Narayenrao, who kept careful records and carefully checked the results. On the 21st June there were 1,173 mill hands on the muster roll. We are told that after that date 1,040 were twice inoculated with a death-rate from plague of 22 altogether, or 2·11 per cent.; 58 were inoculated once only, and show a plague death-rate of 13·79 per cent. (8 altogether); while the remaining 75, who refused inoculation, lost 20 out of their number from plague, or a percentage of 26·6 per cent. These figures are of no value for computing the relative immunity of inoculated and uninoculated, because we are not informed whether the inoculations were performed simultaneously or at what stage of the outbreak the average strength of the inoculated was reached. But the fact that the mortality among the inoculated is said to have amounted to 3·3 per cent., shows, if the figures are accurate, that the inoculated living among uninoculated inhabitants during an outbreak may suffer considerably from plague.

Inoculations in Dharwar town.

55. Contemporaneously with the decline of the outbreak at Hubli, a serious outbreak of plague occurred in Dharwar. The population of the town in August 1898 amounted to 38,325, which is in excess of the population ascertained by the Imperial Census of 1891. The policy adopted on the outbreak of plague was the same as in Hubli, that is to say, stringent measures were enforced against the uninoculated, and these were, to a large extent, relaxed in the case of twice inoculated persons. When the plague got a foothold in the town in August, inoculations were pushed to the utmost extent by the energetic Collector of Dharwar, Mr. Cappel. By the week ending on the 14th October, the first for which we have figures, 4,926 people had been inoculated once, and 3,387 persons twice. The inoculations were proceeded with during the outbreak and by the 4th January 1899, as we learn from a report which has been supplied by Dr. Hornabrook, who was continuously on plague duty at Dharwar, 17.604 persons had been inoculated, 11,457 twice, and 6,147 once only. A considerable number of inoculations were done in the town in the case of villagers who came in specially for the purpose, but in this place we need take no account of these.

Owing to the fear of segregation and inoculation, Dharwar was, to a large extent, emptied of its inhabitants. Influenced by this fear, 18,000 people left the town in one week at the commencement of October, and by the beginning of November the census figures show that the population was reduced to about 9,700. The large majority of those who left the town camped in the fields round Dharwar. The greater part of those who remained in the town submitted to inoculation, and the condition of things thus brought about was, apparently, the following: Dharwar itself contained a population largely inoculated, while in huts in the fields round about the town there was a larger population mostly uninoculated. The importance of this will be realised when we come to deal with the statistics of the result of inoculation.

Statistics of inoculation in Dharwar town.

Two series of statistics have been furnished to us. The first is that placed before us by Mr. Cappel, and based on a weekly revision of the census which was carried out after October 19th, in the same manner as at Hubli. The second series, that put in by Miss Corthorn, M.B., who worked at Dharwar during the whole time of the outbreak there, covers the period for the five weeks ending on the 16th November. Mr. Cappel's table does not distribute the population in such a manner as to permit of our basing upon it calculations to determine the relative immunity of the inoculated and the uninoculated. Neither are we able to make such calculations upon the figures for plague attacks and deaths which he gave us up to the 2nd December 1898, and according to which the uninoculated had had 1,172 attacks, with 965 deaths; the once inoculated had had 115 cases and 42 deaths, and the twice inoculated had had 29 attacks, with 7 deaths. On the other hand, Miss Corthorn's table gives us the number of the inoculated and uninoculated present in the town, and the number of plague attacks and deaths distributed between inoculated and uninoculated persons. The numbers of the population she took from the census, and she made special inquiries to obtain information of attacks and deaths, but none the less her figures in many cases agree with those given by Mr. Cappel for weeks ending two days later than the weeks adopted by her. Miss Corthorn said :—" I have kept a register as accurately as I could of all the people inoculated. I have kept in touch with the medical officer of the hospital, and I have examined the returns of all the patients going into the hospital who were returned as being inoculated, and I have also got the authorities where I have been at work at different centres to tell me of any people they know whom I have inoculated and who have got plague. I have also got, where possible, the inoculation checks returned and entered in the register of the people that I could get hold of whom I have inoculated and who have developed plague afterwards. Of course, I have missed a good number, but I think I have obtained very fair results. I have got hold of the larger part of the people who have developed plague. I have got hold of all the cases that I could each week, and I have worked out week by week the percentage of morbidity and mortality on the weekly census. I have done it also on my register and compared it with the average population, and I have also done it week by week on the numbers given in the census of the inoculated and uninoculated in the town." Upon the figures she collected she based calculations showing in respect of mortality " a percentage in favour of the twice inoculated " of from 90 to 99 per cent. The method of calculation employed by Miss Corthorn is that which has been adopted by Mr. Haffkine, and which is criticised in paragraph 69 below. The table compiled by her is as follows :—

Period Week ending.	Population.			Plague Attacks among			Plague Deaths among			Percentage of Reduction in Favour of			
	Uninoculated.	Once inoculated.	Twice inoculated.	Uninoculated.	Once inoculated.	Twice inoculated	Uninoculated.	Once inoculated	Twice inoculated.	Once inoculated of		Twice inoculated of	
										Morbidity	Mortality	Morbidity	Mortality
19th October 1898	5,748	3.542	2,112	168	17	1	124	7	1	83·5	90·	98·	99·
26th „ „	4,200	3,535	2,428	100	20	8	71	6	1	74·3	89·9	86·	97 5

Criticism of statistics for Dharwar town.

Certain sources of fallacy which detract from the accuracy of Miss Corthorn's figures have been pointed out by herself in her statement quoted above. It seems to us, however, in consideration of the evidence of Mr. Cappel and Major Hardy, Chief Plague Officer at Dharwar, that a further serious source of fallacy, and a fallacy which Miss Corthorn has not attended to, is that in the table the population figures refer to the town alone, while the figures relating to plague attacks and deaths include also cases of persons who found their way back to their houses, or were brought into hospitals in the town from the camps around Dharwar. We have not been supplied with the numbers of these cases, but we were informed by Major Hardy that in the last week of November and the first week of December (*i.e.*, in the period almost immediately subsequent to the period covered by Miss Corthorn's statistics) all the attacks and deaths among uninoculated which came to the cognizance of the authorities, were imported from among the body of uninoculated who were encamped in the fields. It will thus be seen that the statistics must have been seriously vitiated by this source of error. Our attention has, moreover, been drawn by Dr. Hornabrook to another source of error. He stated, speaking of Dharwar, that "It is impossible to properly ascertain the number of plague attacks that may occur among inoculated persons, for so many of the people are removed into the jungles directly they are taken ill." If this occurred, and we have no doubt that it did, inasmuch as the stringent plague measures which were adopted must have engendered concealment, we have here again a serious source of fallacy. For the number of plague attacks given for the inoculated was so small that the removal of even a few of these cases from the cognizance of the authorities would have introduced an important error into the figures.

In view of the many serious sources of error adverted to above, we are of opinion that no reliance can be placed on the arithmetical estimate of the relative immunity of inoculated and uninoculated put forward by Miss Corthorn. But here again, as everywhere where we show reason for discrediting the arithmetical estimates which have been put forward as evidence of the benefits which have been derived from inoculation, we are desirous of making it plain that we are satisfied with the weighty evidence in favour of inoculation, which is afforded by the opinions of those who were on the spot, and had under their constant observation its beneficial effect in warding off plague and diminishing the fatality of the disease.

Inoculations in Dharwar Jail.

Lastly, the inoculations which were performed in the Dharwar Jail may here be briefly referred to, for the outbreaks of epidemic disease occurring in jails are of particular value, as all circumstances connected with them can be accurately controlled. Plague broke out in the jail in October, the first case occurring on the 19th of the month. Between that date and the 9th November, when the outbreak ceased, six attacks took place, of which five proved fatal. After the occurrence of three cases, inoculations were resorted to in addition to other sanitary measures. They were commenced on the 23rd October, and all the prisoners were inoculated by the 6th November. Only one case occurred among the inoculated, in a prisoner who was inoculated on the 6th November, was attacked on the 9th November, and was the only person attacked who recovered.

Inoculations at Gadag-Betigeri.

56. Next after the inoculations in Hubli and Dharwar, it will be convenient to consider the inoculations in Gadag-Betigeri, a third town in the Dharwar district to which the policy of extensive inoculations was applied. The town is not far from Hubli, and is divided into two parts, about one mile distant from each other, each of which had a population of about 13,000 in the beginning of October 1898. The total population for the whole town was thus somewhat greater than that, 23,000, ascertained in 1891. One part, known as Gadag, is inhabited principally by agriculturists who have their fields to move into when they vacate their houses, while the other part, Betigeri, contains chiefly residents of the commercial and industrial classes who do not find it so easy to move out of their houses. Plague established itself in the two parts at different times, but though it broke out in Gadag about the middle of October 1898, and did not become serious in Betigeri till it had reached its climax in Gadag, about two

months later, we must deal with the figures for the town as a whole, for they were so collected for the purpose of compiling the statistics supplied to us.

Statistics regarding inoculations in Gadag-Betigeri.

The plague measures applied were practically the same as in Hubli and Dharwar, and inoculations were pushed by the grant of special privileges to the twice inoculated. A special census of the town had been taken in December 1897, and after the outbreak of plague, from 18th November 1898, arrangements were made to register the people as inoculated and uninoculated, and to keep the census up to date by a weekly revision on the same system as in Hubli. Evacuation appears, as in Dharwar, to have been practically insisted on in the case of the uninoculated. There were, however, many inoculated persons among those who left their houses, and as the result of evacuation, which was to a large extent voluntary, Gadag was practically emptied. We are told by Mr. Foy, M.B., who was on plague duty in the town, that "Betigeri, on the other hand, learned by the experience of Gadag. . . . The people of Betigeri made a great rush for inoculation, and thus avoided the general evacuation of the town by getting all the inmates of their houses inoculated." We find, however, from estimates put before us by Mr. Foy, that a large exodus, amounting to that of 5,800 people out of the population present in October, did take place from Betigeri, and that the proportion of the inhabitants of Gadag inoculated was not very much less than in Betigeri. Mr. Foy informed us that even before the plague obtained a hold of the place, the numbers of once and twice inoculated persons in Gadag-Betigeri were 2,135 and 365 respectively, of whom about 2,000 lived in Gadag. The subsequent progress of the inoculations and the course of the plague among the inoculated and uninoculated respectively is illustrated by the sets of statistics put before us by Mr. Foy and by Miss Corthorn, M.B., who also was on plague duty in the place. Miss Corthorn's statistics cover a slightly longer period and are arranged by weeks, while Mr. Foy's are arranged by months. From both these series of statistics we have compiled the following table :—

—	Population as taken from the Census				Plague Deaths according to Miss Corthorn.				Plague Deaths according to Mr. Foy.					REMARKS.
	Uninoculated.	Once inoculated.	Twice inoculated.	Total.	Uninoculated.	Once inoculated.	Twice inoculated.	Total.	—	Uninoculated.	Once inoculated.	Twice inoculated.	Total.

Criticism of above statistics.

Miss Corthorn's and Mr. Foy's figures for the population are taken from the weekly census; for reasons similar to those discussed in connection with the Hubli census, their absolute accuracy must be doubted. Further, the figures given contain some internal evidence of error, in that the totals of the average weekly strength of the

uninoculated, the once inoculated and the twice inoculated, as calculated from the figures given under these headings, do not together amount to the average weekly strength of the total population. The figures for plague deaths, moreover, do not agree in the two sets of returns which have been given us. Mr. Foy was himself responsible for classifying as inoculated or uninoculated the cases of patients who died in the hospital, and he was the ultimate authority for the classification, in cases of doubt, regarding patients who died outside the hospital. Mr. Foy's are, therefore, the official figures. Miss Corthorn's figures were, to some extent, obtained by independent inquiry. She tells us that she went every day to the hospital to look at all the cases that came in, and cross-examine the patients and their attendants, as to whether they had been inoculated or not. Further, where such cross-examination yielded no reliable information, she went to the census supervisors to consult their lists and obtain their assistance, as they had got to know all the people fairly well. In these circumstances, we might have expected that Miss Corthorn's figures would not be less than the official figures, and would differ, if at all, only in the distribution of the deaths between inoculated and uninoculated. But, as a matter of fact, Miss Corthorn's figures, from the commencement of plague up to the 10th February 1899, for which period a comparison can be instituted, give us a smaller total number of plague deaths than Mr. Foy's figures, as will be seen in the following table:—

Plague Occurrences from Commencement of Plague to 10th February 1899.	Among Uninoculated.		Among Once inoculated.		Among Twice inoculated		Total.	
	Attacks.	Deaths.	Attacks.	Deaths.	Attacks.	Deaths.	Attacks	Deaths.
Miss Corthorn's Figures - -	266	198	28	14	86	39	389	251
Mr. Foy's Figures - -	287	235	35	14	104	46	426	295

In view of the fact that there is a discrepancy between the totals given us for plague deaths in these two estimates, it is manifest that both cannot be correct. But inasmuch as the discrepancy does not affect the results when they are expressed in percentages, we have thought it of interest to calculate the relative incidence of plague cases and plague deaths on the inoculated and the uninoculated on the two sets of figures supplied to us. Miss Corthorn's statement allows us to make such a calculation for a period extending from the 18th November to the 17th February, while from Mr. Foy's figures the calculation can be made from the 18th November to the 10th February only. The results which we obtain are as follows:—

—	From Miss Corthorn's Figures. From 18th November to 17th February.						From Mr. Foy's Figures From 18th November to 10th February.					
	Average Population.	Attacks		Deaths.		Case Mortality per cent.	Average Population.	Attacks.		Deaths.		Case Mortality per cent.
		No.	Per cent.	No.	Per cent.			No.	Per cent.	No.	Per cent	
Uninoculated .	3,075	240	3·	188	2·3	78·2	8,687	239	2·7	198	2·3	83·
Once Inoculated .	2,388	29	1·2	14	·6	48·2	2,528	33	1·3	14	·5	42·5
Twice Inoculated.	7,170	107	1·4	47	·6	44·0	6,868	104	1·5	46	·7	44·
Total Inoculated .	9,558	136	1·4	61	·6	45·0	9,896	137	1·5	60	·6	44·
Diminution of mortality in favour of the inoculated.					1·7						1·7	

Quite apart from the question of the accuracy of the data on which these calculations are based there are two points which must be noted. It must be noted, in the first place, that the comparison thus instituted is unduly to the disadvantage of inoculation, inasmuch as plague was relatively less severe in the earlier phase of the epidemic, when the number of the inoculated was

below their average strength than in the later phase, when the number of the inoculated was above their average strength. The second point to be noted is that in the later portion of the period of observation the uninoculated population declined to such an extent as to suggest doubts as to whether it was comparable with the inoculated. An incomparability of this sort would, in the comparison which has been made above, operate unduly to the advantage of inoculation. The deduction to be made, if we may set off the error which would be introduced by the inclusion of the earlier period against the error which would be introduced by the inclusion of the later period, is that the uninoculated proved themselves in Gadag-Betigeri to be four times as liable to plague as the inoculated.

Inoculation in villages of the Dharwar District.

57. In order to complete the consideration of facts relating to the Dharwar District, it will be convenient to notice here two instances of severe village outbreaks in the district, in the case of which the plague measures ordinarily applied to villages were supplemented by the use of inoculation. The outbreaks are those that took place in Lingdhal and Huilgol. We have been supplied with particulars regarding them by Rao Bahadur R. R. Bhardi, who dealt with the plague in the villages in question in his capacity as an officer on the staff of the district.

Lingdhal.

Infection was brought into Lingdhal some time in July 1898, but the existence of the disease there did not come to the notice of the authorities until the 21st August. Steps were then taken to number the people and to evacuate the village, and inoculations were also at once commenced by Dr. Foy. Evacuation was completed in ten days, and by that time 117 cases with 85 deaths had occurred. The inoculations were continued periodically, and a large number of people were operated on on the 7th and 8th, and on the 27th and 28th of September. The population of the village in 1891 was 1,469, and the census taken after plague was detected showed that 1,372 people were then present. Of these 678 were inoculated, many twice, before the 14th October after which date no further primary inoculations took place. After complete evacaution, the plague still continued severe, and 318 cases with 287 deaths took place. Of the plague occurrences reported after complete evacuation, 34 cases and 31 deaths were assigned to the inoculated. If this is correct, the balance of 284 cases with 254 deaths must have occurred among the uninoculated.

The numbers of the inoculated and uninoculated as given to us have been arrived at in the following way. The number of the inoculated was got by taking the total number of persons inoculated, without deductions for deaths and emigration. The number of the uninoculated was obtained by deducting the number of the inoculated, arrived at as above, from the population of the village ascertained by the census taken after plague was detected. Here again no allowance was made for diminution of numbers by deaths and exodus. These figures do not even approximately represent the average strengths of the inoculated and uninoculated present during the period of observation. Therefore, they do not afford any basis for a correct arithmetical estimate of the amount of protection conferred by inoculation. None the less, while we appreciate the existence of serious errors in the figures, it seems to us impossible to draw any other conclusion from them than that inoculations must have done much good. The outbreak in Lingdhal was of extraordinary severity, evacuation did not check it, the proportion of the population who submitted to inoculation before the outbreak began to decline was certainly large, and yet the inoculated are reported to have suffered only a little more than one-eighth of the loss which befell the uninoculated after the completion of the evacuation.

Huilgol.

The history of the second village which is to be noticed here may be given as follows in the words of Mr. Bhardi: "In the village of Huilgol, with a population of 1,866, both cholera and plague prevailed simultaneously. The first case of plague occurred on the 7th September 1898. Between the 7th and 18th September only eight cases of plague occurred. Between the 19th and 22nd September there were no attacks or deaths from plague. On the 24th September, Dr. Foy examined 11 cases of sickness, but was able to discover plague in only four cases.

The other cases were found more or less suspicious and had all the symptoms of cholera. Complete evacuation could not be promptly effected owing to rain and inclement weather. By the 10th October 1898, a greater portion of the village was evacuated, and by the end of October it was completely evacuated. Only a small number of twice inoculated people were allowed to stay in the village. But a large number of cases of plague occurred among the people residing in the village before complete evacuation. Up to the 10th October 170 cases occurred, and between 10th and 31st October 228 cases occurred. Altogether, 398 cases occurred before complete evacuation, out of which 350 proved fatal. After complete evacuation only 45 cases occurred within about a fortnight. About 300 persons were inoculated by Dr. Foy about the 10th September, of whom 35 only were inocualted a second time. Forty-five attacks occurred among the inoculated, of which 31 proved fatal. The records do not show how many cases and deaths occurred among the twice inoculated. But I think that they were few, if not *nil.*"

Here, as in the case of Lingdhal, it is obvious that percentages of incidence worked out on the numbers given as those of the uninoculated and inoculated will be fallacious, but, taking such percentages as a rough guide, we find that the inoculated, in comparison with uninoculated persons living under the same conditions, appear to have enjoyed a considerable amount of protection against attack, though inoculation did not prevent the plague from affecting them severely.

58. We may now pass on to deal with inoculations in the City and the Civil and Military Station of Bangalore.

Inoculations in Bangalore City.

Plague broke out in Bangalore City in the middle of August 1898. By the 31st March, as we have already stated, it had carried off an estimated number of 6,370 persons, amounting to 7·5 per cent. of the normal population. Inoculation on a large scale was made a prominent feature of the plague policy, and the Mysore Government, on October 4th, issued an order making it practically compulsory for all its servants and those attending schools and colleges to be inoculated. The authorities, however, did not insist on double inoculations. Contacts who had undergone inoculation once were not removed to segregation camps, and permission was given for the home treatment of sick persons living in good houses of which all the inmates had been inoculated. The restrictions imposed on travelling were also remitted in the case of the once inoculated. Inoculations were commenced in the first week of September directly the city was declared infected. Among the first to have themselves and their families inoculated were the majority of the officers serving under the Mysore Government. It was not, however, until the third week of September, that the people came forward readily for inoculation. From the 1st September to the 23rd September 523, and between the 23rd and the 30th no less than 4,163, operations were performed. By the 1st November 12,100 persons had been inoculated, and about this time the supply of fluid from Mr. Haffkine's laboratory ran short. The mortality from plague in the City continued to increase until the middle of November, and there had then already begun the enormous exodus of the population which, by the middle of December, reduced the numbers in the town from 84,000 to an estimated number of 45,000. By the end of December, when the epidemic had practically ceased, 25,163 persons had been inoculated, including 1.279 twice inoculated, but even after the plague had practically died out inoculations continued, and about 10,000 more persons were operated upon. No definite data can be obtained regarding the effects of the inoculations, because no periodical census was taken, and the population was reduced as we have seen, by nearly 50 per cent. The inoculated left the town in large numbers, and we have thus no knowledge of the actual numbers of the inoculated and uninoculated present in the town at different times during the course of the epidemic. Inasmuch as we have seen that the recorded plague deaths in the City amounted to about two-fifths only of the presumptive number of such deaths, not much reliance can be placed on the figures which have been given as representing the incidence of the plague among the inoculated. Among the inoculated in Bangalore City 194 attacks were reported by the third week in December, but of these only 109 cases, of which 66 were fatal, were verified as actual plague cases among inoculates. The number of reported attacks among inoculates

rose to 215 by the end of December, and to 233 by the 31st March; of these 139 and 158 respectively occurred in persons whose inoculation could be actually verified. Colonel Benson, I.M.S., Senior Surgeon and Sanitary Commissioner to the Mysore Government, stated that there may have been a very large number more of attacks and deaths among the inoculated than have been recorded, and that he was unable to say that either the number of attacks or the number of deaths was in any way complete. It was also pointed out that it was very difficult to ascertain, in the case of the large numbers of dead bodies thrown out into the streets, whether these had or had not been inoculated. Mr. Madhava Rao, the Plague Commissioner for the State of Mysore, stated that in some places he found that there had been attacks in inoculated persons which were concealed from the authorities. Such cases, he said, were never put on the register, in which therefore there must have been errors. There are thus no statistical results to be considered in connexion with the effect of inoculations in Bangalore City.

Inoculations in Bangalore Civil and Military Station.

59. As has been already stated, the plague spread from Bangalore City to the adjoining Civil and Military Station at the end of September 1898. The policy adopted in the Civil and Military Station was similar to that adopted in the City. The first case of plague occurred on 15th September, but the epidemic did not become really severe until the second week in October. On the 14th October, 11 persons died of plague, and the highest mortality was reached on 22nd November, when in one day 75 persons died of plague. From that time the epidemic gradually decreased, though it was still high in December when we reached Bangalore. In February 1899 very few cases occurred, and the outbreak was practically over by the end of March. In the Civil and Military Station 1,075 persons, among the civil population, had been inoculated during the month of September; 12,378 had been inoculated by the 28th October; 20,591 by the 25th November; 27,419 by the 30th December; 29,928 by the 27th January 1899; 30,091 by the 24th February; and 31,794 by the 31st March. Of the ultimate total, 30,823 were single inoculations and 971 double inoculations. The policy adopted towards inoculated persons was similar to that adopted in the City, and, as in the City, there was no proper periodical census or check upon the number of inoculated and uninoculated persons actually present in the Station from time to time, and the absolute necessity of accurate information on this point is obvious, in view of the large exodus which took place. With regard to the number of plague deaths, and also to the distribution of these among the inoculated and uninoculated, the information which is available is, as in the case of Bangalore City, very inaccurate. In many cases dead bodies were secretly buried or placed in the open, so as to prevent identification of the house in which death had occurred. In other cases bodies were found deserted in houses. These came to the notice of the medical men who were appointed to visit all cases of sickness that occurred and to find out particulars regarding all deaths. When asked concerning the correctness of the information that reached the authorities as to the number of deaths among the inoculated, Colonel Robertson, the Resident in Mysore, said, "I am not prepared to say that information would be reliable. . . . If a man has died, the municipal officer makes an attempt to get an inoculation certificate. He is supposed under the orders to get a certificate and send it to the inoculating officer. If there is any doubt as to whether the man has been inoculated or not, he sends it to the medical officer, who tries to trace it. The matter, however, is of great difficulty. I do not think the system is working well." Asked whether the people would readily give up the certificate of inoculation, the Resident replied, "I should think the tendency on the part of the deceased's relatives would be to stick to the certificate, and it follows that such a case would probably be classed as having occurred among the uninoculated." Captain Roe, R.E., who was in charge of plague measures in Bangalore, corroborated Colonel Robertson's opinion and said, "I think it is quite possible that these certificates may be passed on," and he admitted that there would be an undoubted inducement to retain them. The following table which refers in particular to cases certified to be plague by Government medical officers and unqualified native medical practitioners between the 15th September 1898 and

the 28th February 1899, has to be read in the light of the observations above quoted :—

—	Total number of Cases diagnosed as plague.		Number found to be inoculated.		Number found uninoculated.		Number doubtful or unknown.		Number of bodies buried without permit and counted as plague.
	Attacks	Deaths.	Attacks.	Deaths.	Attacks.	Deaths.	Attacks.	Deaths.	
Seen by Government Medical Officers	3,473	2,772	374	260	2,961	2,374	138	138	516
Seen by unqualified Native practitioners	9	9	2	2	3	3	4	4	
Percentage of Total seen	—	—	10·8	9·4	85·1	85·5	4·1	5·1	

In short, the figures with which we have been supplied regarding the civil population of the Civil and Military Station afford us no better basis for a correct estimate of the amount of protection conferred by inoculation upon the inoculated than do the figures which relate to the City of Bangalore.

Inoculations among the military population of Bangalore.

59. Plague broke out among the Native troops of the Madras Army, the native followers of British Regiments, and the Transport and Commissariat followers stationed at Bangalore. We have been supplied with two sets of figures relating to the course of plague and the progress of inoculations among the military population affected. The first set of figures, put in by witnesses who appeared before us at Bangalore, carries us down to the 2nd December 1898 only, and will be considered later. The other set put in by Mr. Cadell covers the whole period during which there was plague in the Cantonments. Mr. Cadell's statistics supply us with details regarding each Regiment and body of followers among whom plague broke out, and are summarised by him in the two following statements :—

Corps.	Strength.	Plague Seizures.				Plague Deaths.			
		Among uninoculated.	Among once inoculated.	Among twice inoculated.	Total.	Among uninoculated	Among once inoculated.	Among twice inoculated.	Total.

Criticism of figures regarding inoculations in military population of Bangalore.

The figures given above are summarised from detailed statements which set forth the strength of the troops, the number of the followers as far as it was known, the numbers inoculated week by week from the commencement of inoculation to the date when plague ceased, and the numbers of attacks and deaths that occurred among the uninoculated, the once inoculated, and the twice inoculated respectively. Postponing for the moment the consideration of the accuracy of this statistical material, we may in the first place proceed to consider whether it is such as to be of use for the deduction of an estimate of the amount of protection which inoculation confers. We must therefore inquire whether, in addition to data with regard to the inoculated, the detailed statistics, which have been summarised above, supply us with data regarding the incidence of plague in uninoculated persons, whom we may justifiably compare with the inoculated soldiers and followers. Firstly, then, we must inquire whether there remained over in the separate military units any group of uninoculated persons who could serve as controls. Failing a control of the kind just mentioned, which would enable us to calculate the incidence of plague on the absolute number of inoculated and uninoculated, we must inquire whether we can obtain from the figures an average weekly strength of inoculated and uninoculated which we may justifiably use for the purpose of instituting the comparison which we have in view. Lastly, if we find that the statistics do not supply any figures on which we can base a comparison between the inoculated and uninoculated among the troops and followers themselves, we must inquire whether any of the facts with which we have been furnished with regard to the civil population of Bangalore supply us with the data for the required comparison. A scrutiny of the statistics of the military population reveals the fact that in each case the whole of the fighting men and of the followers who formed the communities under consideration were inoculated. There is thus no control group available in these communities themselves, in the sense in which control groups were present in the inoculation experiments in the Byculla Jail and at Undhera.

Further, we cannot from the facts and figures regarding the civil population at Bangalore gather any idea as to what would have been the plague incidence among the military population if it had remained uninoculated. We have already pointed out that the number of the civil population is uncertain, that its distribution into inoculated and uninoculated is unknown, and that the record of attacks and deaths is incorrect. In order to determine whether we can find in the figures for the separate military units any material for a comparison between the average number of inoculated and the average number of uninoculated, during the period of the outbreak which elapsed between the commencement and end of inoculations, it will be convenient to examine the data supplied us regarding the different bodies of troops and followers in the order given by Mr. Cadell in his detailed statistics. In the 2nd Madras Lancers, it appears possible to compare the incidence of plague on the average strength of the inoculated and uninoculated, among the troops from the 15th October to the 18th November, and among the followers from the 29th October to the 18th November. Before the dates given there was no plague among the troops and followers, and subsequently there were no uninoculated persons to be treated as controls. Among the Queen's Own Sappers and Miners, the only period in which a comparison seems possible, either among the men or the followers, is in the week ending on the 28th October, but it is doubtful whether conclusions of any value can be drawn from the figures of an isolated week. Previous to the week ending on the 28th October, there was no plague in the corps now in question, and afterwards all the troops and followers were inoculated in the interval which elapsed before plague reappeared. No deductions of any value can be made from the figures relating to the 1st Madras Pioneers. One case of plague occurred among the uninoculated men of this corps in the week ending on the 28th October, when the inoculated men were somewhat less in numbers than the uninoculated. No further cases occurred till the week ending on the 2nd December, by which time no men remained uninoculated. Among the followers no plague occurred till all had undergone inoculation. The figures for the 17th Madras Infantry up to the week ending on the 21st October relate to a period when there was no plague, but a comparison may be possible from the figures which relate to plague among the men from the 22nd October to the 25th November as cases then occurred while part of the regiment was still uninoculated. After the 25th November all the men were inoculated, and the followers did not get plague at all till practically all had undergone the process. The Commissariat and Transport followers, we find, had cases in the week ending on the 21st October, before inoculation began among them, and then no further cases till the week ending on the 2nd December, by which time all had been inoculated. If correct figures for the followers of the 4th Hussars were available, they would have afforded a very useful and interesting comparison between the inoculated and the uninoculated, as the number of attacks recorded among both classes was fairly considerable for some time after the inoculated reached their average strength; but as will be shown later on, the figures are not trustworthy, and therefore cannot be used to any good purpose. All the followers, both of J. Battery, R.H.A., and of the 21st Field Battery, had been inoculated before plague appeared among them. Among the followers of the 25th Field Battery, a comparison between the inoculated and uninoculated is possible for the period from the 29th October to the 25th November, but after that no uninoculated control remained.

Figures for followers incorrect, and supply no basis for comparisons.

We have thus seen that a comparison could be instituted by making use of the figures relating to the men and followers of the 2nd Madras Lancers and of the Queen's Own Sappers and Miners, the men of the 17th Madras Infantry, and the followers of the 25th Field Battery; but when we proceed to inquire into correctness of the figures we find that those relating to the followers cannot be accepted as accurate enough for our purpose. In one case the exact facts regarding the date of inoculation do not seem to be known. This is the case of the followers of the 4th Hussars. Inoculation was said to have commenced on the 31st October 1898, but the returns show two inoculated cases even before the 28th October. In the case of the 21st Field Battery, Lieutenant Clements,

R.A.M.C., said he had seen a re-inoculated person sick with plague on the 10th December, but no re-inoculated person is set down in the returns as attacked. In several instances, cases among the uninoculated were reported to have occurred, after it was supposed that the whole of the followers had been inoculated. Thus, the followers of the Commissariat and Transport were, it was supposed, all inoculated by the 18th November, but in the next week two cases in uninoculated persons were reported among them. The reported strength of the followers of J. Battery, R.H.A., had been inoculated by the 4th November, yet one uninoculated follower is set down as having died from plague in the week ending on the 9th December. In the 21st Field Battery, the number of inoculated followers was equal to the supposed total number of followers by the 11th November, yet three cases among uninoculated followers occurred later. Similarly in the 25th Field Battery, where all followers are said to have been inoculated by the 25th November, six seizures and deaths among uninoculated followers nevertheless occurred between that date and the 9th December. Some idea of the amount of error that may exist can be formed from the case of the followers of the 4th Hussars. When he went to inoculate them, Lieutenant Clements was informed that they numbered 800, yet after he had operated on 1,068, he estimated that a balance of 50 still remained, and the number inoculated ultimately rose to 1,105 by the 25th November. It would appear that the people from the town were in the habit of coming into the lines of the followers to sleep, and may have been attacked and died there. Thus, as there can be no certainty about the number of the followers—which was in no case known exactly and may have been recorded with a considerable degree of error—it would be unprofitable to further deal with the figures for the followers of the 2nd Madras Lancers, the Queen's Own Sappers and Miners, and the 25th Field Battery, or to draw any conclusions from the figures for the followers as a whole.

Comparison between inoculated and uninoculated troops in different corps.

In the case of the troops, however, though we may point out that their total strength as given by Colonel McGann and Mr. Cadell differs slightly, the figures given us may be accepted as fairly accurate and as, in a body of men who like these are under regular supervision, the facts regarding inoculation and attacks and deaths must have been correctly recorded, we may proceed to ascertain the results which we can gather from the figures regarding the men of the 2nd Madras Lancers, the Queen's Own Sappers and Miners, and the 17th Madras Infantry, for the periods which we have stated above to be those for which comparisons in these corps can be fairly made. These results may be summarised as follows:—

Corps.	Period.	Average Strength.		Attacks.		Percentage of Attacks.	
		Inoculated.	Uninoculated.	Inoculated.	Uninoculated.	Inoculated.	Uninoculated.
2nd Madras Lancers.	15th Oct. to 18th Nov.	426	128	9	3	2·1	2·3
Queen's Own Sappers and Miners.	Week ending 28th Oct.	749	20	0	2	0	10
17th Madras Infantry.	22nd Oct. to 25th Nov.	698	82	5	2	·7	2 4

The figures are so small and agree with each other so little, that they do not give us any trustworthy estimate of the protection afforded by inoculation.

Results among troops as a whole.

As then we have seen that the returns for individual regiments and bodies of followers are of little help to us for the purpose of making the comparison which we have in view, it seems necessary to summarise the results so as to ascertain what the average effect of inoculation was in the whole of the troops who were subjected to inoculation. We can take the figures for the troops after the week ending on the 21st October, when plague appeared among them, and up to the week ending

on the 9th December, when the whole of the troops had been inoculated and the disease practically died out among them; and, if we assume, as we think we may, that all the troops were throughout exposed to some risk of infection, then inasmuch as the inoculations in the different corps were done at different times, we may treat the uninoculated men of the later inoculated corps as controls for the inoculated men of the earlier inoculated corps. If we take the strength of the troops present to have been 2,900, we find that between the dates named we get the following results :—

	Average Strength.	Attacks.		Deaths.		Percentage of Case Mortality.
		No.	Percentage.	No.	Percentage.	
Uninoculated . .	446	8	1·7	7	1·5	87·5
Inoculated . .	2,454	28	1·1	18	·7	62
Diminution of mortality in favour of inoculated . .						·8

This is the only comparison which we think legitimate, and though it does not tell much in favour of inoculation as a means of warding off plague, we may point out that the vaccine was not severely tested on account of the efficiency with which sanitary measures generally were applied to the military community. The results of another comparison have been placed before us by Mr. Cadell, in which the percentage of estimated deaths among the population of the Civil and Military Station is reckoned as 5·4, and is contrasted with a mortality of only 0·9 among a total military population of 15,183. But this cannot be accepted as even approximate, for while, on the one hand, Mr. Cadell's comparison is unduly to the disadvantage of inoculation so far as it fails to take account of the exodus from the Civil and Military Station which was not paralleled by any scattering of the military population, on the other hand, it is unduly to the advantage of inoculation in that no allowance is made for the effects of the strict supervision of the military, the impossibility of the spread of infection from concealed cases, and the segregation and others sanitary measures which were effectively applied to them.

Statistics put forward by witnesses at Bangalore.

We have postponed up to this point the consideration of the figures given to us by Colonel Esmond White, R.A.M.C., and other witnesses when we were at Bangalore, because we find that they afford us no help in arriving at a correct estimate of the advantages of inoculation. The comparison which is instituted in them is one based on average strengths, and the average strengths have been incorrectly taken as, in calculating them out, figures have been included which refer to a period antecedent to the outbreak of plague.

We have thus seen that, owing to the fact that all the soldiers of the Native Regiments affected in Bangalore were inoculated, and that all necessary sanitary measures were effectively applied to them on the outbreak of plague, results which can be deduced from the figures relating to inoculations among them are not so valuable as they might have otherwise been.

Inoculations in Mysore City.

60. It will be convenient here to complete the consideration of inoculations in the Mysore State by dealing with the case of Mysore City, where also inoculations on a large scale were resorted to. We have already stated that, though plague was imported into the City from Bangalore in October 1898, it did not become indigenous till the end of November, and was not severe till January 1899. To the end of June 1899, as narrated in the historical portion of this Report, a number estimated to amount to about 3·4 per cent. out of 80,000, the normal population of the city, died of plague. The measures adopted to deal with the outbreak were much less stringent than those generally adopted elsewhere. They did not confer any material advantages upon the inoculated, except, perhaps, in the matter of facilities for railway travelling. Inoculations were performed in Mysore City under conditions more favourable for the production

of the greatest possible advantage than in most places in India, for a very large number of persons were inoculated before plague became virulent. The number of people inoculated in October was 3,745 ; 6,926 more inoculations were done in November; and the number rose to 25,922 by the end of December. In January 1899, 3,149 inoculations were performed, and in February, though the climax of the outbreak was not reached till that month, less than 500 people submitted themselves for the operation. By the end of March the total number of inoculations amounted to 29,978.

Consideration of statistics for Mysore City.

There was an exodus from Mysore, and a periodical census of the inoculated and uninoculated was not regularly taken from the commencement of the outbreak. Therefore, we have no means for the certain determination of the number of people present in the city from time to time, and their distribution among the inoculated and uninoculated. Moreover, the total recorded mortality exceeded the normal mortality by more than the recorded number of plague deaths, and the exact number of plague deaths, and their incidence on the inoculated and uninoculated parts of the population is, therefore, unknown. In putting before us statistics regarding Mysore City, Mr. Cadell stated that the figures referring to attacks and deaths among the inoculated were ascertained by inquiries made in the households concerned, and that, if possible, a certificate was recovered, but it appears that out of 118 attacks assigned to the inoculated for the period up to the 28th February 1899, only 98 attacks were verified as those of inoculates. Up to the end of March, out of 2,076 reported plague deaths, about 111 only are said to have occurred among the inoculated portion of the community. Only 158 inoculated persons are reported to have been attacked. *Primâ facie* it is not likely that in Mysore, relatives or others, would represent a dead man to have been inoculated when he was not so, and the medical officers stated that they only found rare instances in which transference of certificates was suspected. But, on the other hand, there was nothing to induce people to report plague, inasmuch as omissions to report usually passed undetected and unpunished. Therefore we cannot assume that the number of reported cases correctly represents the number of cases that actually occurred. Moreover, in consideration of the large proportion of the population which was inoculated, and the fact that the numbers of inoculated must have lived in close connection with plague in their houses, we cannot believe that the number of attacks and deaths attributed to the inoculated actually represents the number that occurred. Indeed, Mr. Cadell in putting the figures before us, pointed out that they were inaccurate. He said with regard to these figures: "I have put them here for what they are worth, but from Mysore City they are inaccurate as far as regards the examination of the bodies, and I would not vouch for them." Nevertheless, Mr. Cadell believed that there was no great number of hidden cases and deaths among the inoculated, though he thinks that a certain number of people did get inoculated in order to get away, as facilities for travel were given to the inoculated.

We have therefore no data for any calculation, even approximate, of the effects of inoculation in Mysore City, and any attempt at such a calculation would fail. But we do not doubt that inoculations did much good in the City.

Inoculations in Karachi City.

61. The most elaborate attempts to collect statistics regarding inoculations in places other than those we have already dealt with, were made in Karachi, Bulsar and Baroda, and we will now proceed to consider the figures laid before us for these places in the order given.

With reference to inoculations in Karachi we have to consider only the second outbreak of plague in the City. When this outbreak commenced in March 1898, Mr. Kaka, the Health Officer to the Municipality, suggested that inoculation should be introduced. On the 13th April he commenced to inoculate those who offered themselves. The Plague Committee, however, did not at once take up the matter, and it was not till the 2nd of May that they resolved to encourage inoculation by relaxing the ordinary plague measures in favour of the inoculated. The privileges that the Committee resolved to grant to the inoculated were not great, and consisted in permitting once-inoculated contacts to go to health camps instead of to segregation camps, provided that

they had been inoculated at least four days before the occurrence of the case on account of which, if uninoculated, they would have been segregated. No additional privileges were accorded to the twice-inoculated. The privileges that were accorded were not sufficient to induce many people to come forward for inoculation, and, manifestly, there was no inducement to undergo double inoculation. Up to the 19th July, when inoculation ceased because the outbreak was well on the decline, only 6,106 persons had undergone inoculation; only 287 of these had been inoculated twice. Of the total of 6,106 about one-third were Khojas, who will be particularly dealt with later on, and who had special reasons for being inoculated.

Statistics for Karachi City.

The materials contained in the evidence of Mr. Kaka, and in his report on the Karachi inoculations which we have before us, provide us with information regarding the progress of the inoculations and the occurrence of plague among inoculated persons. This information may be tabulated as follows:—

Week ending.	Number of inoculations performed among			Occurrences of plague among the inoculated.		Remarks.
	Residents of Karachi other than Punjabhai Khojas.	Punjabhai Khojas.	Total.	Deaths.	Cases.	
April 15th, 1898	19	...	19	...	...	The second outbreak in Karachi reached its climax in the beginning of May and declined to small proportions in July, with a continuation of cases in small numbers in the succeeding months.

TOTAL	4,208	1,898	6,106	44	28	

NOTE.—Mr. Kaka has counted among the uninoculated the three cases which occurred in the week ending on 21st October as the patients were attacked more than five months after inoculation, and as he was of opinion that inoculation did not protect for more than five months. This opinion he founded upon the dictum of a newspaper.

Criticism of figures for Karachi City.

Mr. Kaka, in summing up his remarks on the subject of inoculations in Karachi as a whole, states that the figures show a difference of 84 per cent. in plague mortality in favour of the inoculated, but he himself says: "These results must be accepted with reservation, as the actual population of Karachi during the plague is not accurately known." Not only was the population not accurately known, but Mr. Kaka's estimates may have been very wide of the mark. No attempt was made to determine the respective numbers of those who remained in the City and those who left for the camps outside. Neither in the City nor in the camps outside was any census taken to ascertain the respective numbers of the inoculated and the uninoculated. Inasmuch as both classes left the City, the basis of Mr. Kaka's calculations with respect to the relative incidence of plague among the uninoculated and inoculated must be wrong, inasmuch as he made a deduction from the uninoculated on account of persons who left the City, while he made no such deduction in the case of the inoculated. A further error has been admitted

into Mr. Kaka's calculations, inasmuch as he omitted to notice that the incidence of plague among the inoculated and the uninoculated, respectively, ought to have been calculated on their average strength, and not, as he has calculated it, on the respective total numbers of those who were inoculated and uninoculated at the end of his period of observation. In the particular case of Karachi, the error which must thus have been imported into the calculations is very considerable, inasmuch as only 2,324 of the 6,106 inoculations were done before the middle of May, when the outbreak had begun to decline.

For the above reasons, it will be apparent that no good purpose can be served by a detailed consideration of the figures relating to the City as a whole. We may therefore turn to the consideration of certain further statistics which are included in the totals for the City, and relate to narrower spheres of observation. We have been furnished with two sets of statistics, one relating to the Khoja community and the other to a group of inoculated and uninoculated persons living in a number of plague-infected houses in the City.

Inoculations among the Khojas of Karachi.

In dealing first with the figures relating to the Khojas, it must be pointed out that the Khoja community of Karachi is divided into two sects, the Pirai and the Punjabhai Khojas, who lived chiefly in the badly affected Machi Miani quarter, and were not like the other inhabitants of the quarter evacuated from their houses. The Pirai Khojas, who are not followers of H. H. the Aga Khan, were practically uninoculated; of 245 members, 4 only were inoculated. On the other hand, the Punjabhai Khojas, like their co-religionists in Bombay, resorted to inoculation, in accordance with the recommendations and directions of H. H. the Aga Khan, who is recognised as a spiritual leader by this sect. Under the Aga Khan's encouragement, it is not surprising to find that 81 per cent. of the Punjabhais were inoculated.

Statistics regarding Punjabhai Khojas and method of compilation.

The statistics at our disposal, which relate to the Punjabhai Khojas, fix the number of the community at 2,326. This estimate is based upon a census taken by the Khojas in August 1898, at a time when they had ceased to suffer from plague. Mr. Kaka has checked the accuracy of the census by calculating out the numbers of the community on the number of deaths recorded among them in ordinary years, taking as the basis of his calculation the assumption that their average rate of mortality was similar to that of the City of Karachi as a whole. Mr. Kaka comes to the conclusion that the census is approximately correct, and we see no reason for doubting the correctness of his conclusion. Mr. Kaka computed the number of Khojas present at the beginning of the outbreak by adding, to the number found present at the census, a number corresponding to the number of reported plague deaths. Having obtained the initial population in this manner, he obtained his number of inoculated by going through his registers and totalling up the number of persons who had undergone inoculation during the whole period of the outbreak. He arrived at the number for the uninoculated by deducting from the assumed initial population the total number of inoculated persons. The total strength of the Khojas during the second outbreak of plague in Karachi was thus computed to consist of 1,898 inoculated and 428 uninoculated persons. These figures are not absolutely correct, because in estimating the initial population no allowance was made for deaths from general causes. We have, however, satisfied ourselves that the error which has been introduced into the statistics by leaving out of consideration the deaths from general causes, does not materially affect the results.

It is apparent that for his data regarding plague cases and deaths and for their distribution between the inoculated and uninoculated, Mr. Kaka has relied principally upon a comparison of the names of persons reported by the plague officers to have suffered from plague, with the names recorded in the inoculation registers. He states, however, that he attempted to supplement the information which he thus obtained by private inquiries. He says:—"I took the Headman of these Punjabhai Khojas into my confidence. I put a special man of my own in charge. He knows all these houses where the Khojas are, and he went round from house to house and enumerated them." We

cannot lose sight of the possibility that the information thus obtained may have been insufficient or inaccurate information, but Mr. Kaka himself claims that in so far as they relate to the inoculated at least, his statistics are quite correct

On the basis of the information thus obtained, Mr. Kaka institutes a comparison between the plague incidence among the inoculated and that among the uninoculated, respectively, and arrives at the conclusion that there was "a difference of 77 per cent." in plague mortality in favour of the inoculated.

Mr. Kaka's estimate of protection afforded not based on average strength; results of calculation on that basis.

We cannot accept this estimate, because, since the numbers of the inoculated and uninoculated were constantly altering, the incidence of plague ought, we think, to be calculated upon their respective average strengths. The statement of the progress of inoculation which was supplied to us by Mr. Kaka allows us to ascertain the average strength of the inoculated, and, from this, we are able to obtain an approximate estimate of the average strength of the uninoculated by deducting the average of the inoculated from the total estimated population which, as we have already stated, can be accepted as sufficiently accurate for this purpose.

We find that the large majority (1,809) of the total inoculations (1,898) was done between the 25th April and the 3rd June. This interval corresponds with the period during which plague was most severe in the City, and also to that in which all the recorded cases among the Punjabhai Khojas occurred. We, therefore, cannot go wrong if we limit our consideration to that part of the statistics which relates to the six weeks between the 23rd April and the 3rd of June. We may work out a comparison for the period in question as follows: —

—	Average Strength.	Reported Plague Deaths.	
		Number.	Percentage.
Uninoculated	1,132	28	2·4
Inoculated	1,149	9	·75
Diminution of mortality due to inoculation			1·6

It is to be noted that the comparison given above holds true only if the inoculated and uninoculated are comparable communities, and if the deaths are correctly distributed among the inoculated and uninoculated and between plague and general causes. We now proceed to consider these points.

Question of comparability of inoculated and uninoculated Khojas at Karachi.

The figures which Mr. Kaka has given us, of the deaths recorded in the Khoja community from causes other than plague, supply us with a means of determining whether, from the point of view of general health, the inoculated and uninoculated are comparable. We propose to set forth the data, first, for the period in which inoculations were in progress and the community suffered from plague; secondly, for the period from the 1st July to the 30th September; and, thirdly, for the additional period from the 1st October to 21st January 1899, for which Mr. Kaka prepared figures at our request and after his examination. For the first period we can base our calculations on the average strength of the inoculated and uninoculated deduced from the figures in Mr. Kaka's report; for the last two periods, the only basis of calculation which is available are the figures of the inoculated and uninoculated, respectively, as determined in the census made in the month of August. In making use of the census figures we have abstained from any attempt to apply corrections for exodus or for deaths from general causes, for, as we have already explained, we give these figures only as approximately correct. The data for each of the

periods may be summarised as follows:—

Period.	Number of		Deaths from General Causes among							
			Inoculated.				Uninoculated.			
	Inoculated.	Uninoculated.	Total.		Children under 5 (amounting to 8·9 per cent. of Total Inoculated).		Total.		Children under 5 (amounting to 24·7 per cent. of Total Uninoculated).	
			No. of Deaths	Rate per Mille per Annum.	No. of Deaths.	Rate per Mille per Annum.	No. of Deaths.	Rate per Mille per Annum.	No. of Deaths.	Rate per Mille per Annum calculated upon the total strength of the uninoculated.
	Average Strength									
23 April 1898 to 30 June (Period of plague), 10 weeks.	1,470	856	0	0	0	0	27	163	10	60
	Absolute Strength									
1 July to 30 Sept., 13 weeks	1,898	428	0	0	0	0	15	140	11	106
1 Oct. to 21 Jan. 1899, 16 weeks.	1,898	428	2	·5	0	0	3	22	2	15
Number and rate per mille per annum of deaths recorded in 39 weeks.			2	1·1	0	0	45	112	23	57

The results tabulated above are so remarkable, indicating as they do such an extraordinary difference in respect of general health between the inoculated and the uninoculated, that attempts have been made in various ways to account for the differences in the mortality of the two groups.

Excess of deaths in uninoculated not due to children.

It has been confidently suggested that the excessive number of deaths from general causes among the uninoculated must have been due to the excess of deaths among children, who formed a larger proportion of the uninoculated community than of the inoculated community. With a view of testing this suggestion, we have worked out from the data which have been supplied to us, the rate of mortality from general causes which deaths among children under five give upon the total strength of the uninoculated, and we have included the results in the table given above. It is shown by the table that no death occurred in 39 weeks among children under five who were inoculated (these amounted to 168), while in the same period uninoculated children of similar age (these numbered 103) lost by deaths from general causes 23, or one-fifth of their number. It is also clear that, after deducting the percentage of deaths from general causes in children, there still remains to be accounted for an extraordinary difference in mortality from general causes between the inoculated and the uninoculated. Excluding the children, we find that during the period of plague, the inoculated had not a single death from general causes, while the uninoculated suffered at the rate of 103 deaths per mille per annum, and that during the 39 weeks for which we have figures, the inoculated died at the rate of 1·1 only per mille per annum, while the death-rate among the uninoculated was 55 per mille per annum.

Excess of mortality in uninoculated not explained by wrong assignment of plague deaths to general causes.

We must therefore look further for an explanation. Consideration shows that we should have an explanation of the excessive mortality among the uninoculated if we assumed that deaths have been wrongly attributed to general causes which in reality are due to plague. That this might have been so is evident from the fact that the causes of death were, at least in some cases, set down on no other evidence than the statement of the relatives of the deceased. Verification by corpse inspection was not always made. Moreover, the suggestion that a large number of plague deaths may have been assigned among the uninoculated to general causes, might be supported

by the figures given in the table above, which show that the period when the largest number of deaths from general causes was assigned to the uninoculated is the period in which plague cases were occurring among the Khojas. On the other hand, this suggestion would appear to be inconsistent with the fact that the numbers set down for the mortality from general causes among the uninoculated remained abnormally high during the succeeding period up to the 21st January. In the 29 weeks beginning from the 1st July, the death-rate according to the figures of the mortality from general causes assigned to the uninoculated is equivalent to an annual death-rate among them of 76 per mille. Therefore, this suggestion does not explain the above normally high mortality among the uninoculated. Moreover, it leaves unexplained the extraordinary absence of mortality from general causes among the inoculated.

Wrong assignment to uninoculated of deaths in inoculated only explanation of excess of general causes mortality in uninoculated.

We cannot believe that, in a community like that of the inoculated, whose average strength was nearly 1,800, and which included among it 168 children under five and 73 persons of 60 years of age and upwards, there can have been no deaths from general causes during a period of 33 weeks, and that only two deaths occurred in the whole period of 39 weeks covered by the statistics supplied to us. We can see no way out of the difficulty except in assuming that a certain number of deaths which are set down as having occurred among the uninoculated ought in reality to have been assigned to the inoculated. This conclusion wins support from the fact that the total number of deaths which are assigned to general causes, set down as having occurred among the Khojas during the whole period of observation, would, if calculated upon the total number of the members of the community, both inoculated and uninoculated, give us a death-rate from general causes of about 28 per mille per annum, which, allowing for exodus and other causes of error, is an approximately normal death rate such as we might have expected to have occurred.

Explanation that inoculation protects against diseases other than plague must be rejected.

We see no alternative to accepting this explanation, that deaths which occurred among the inoculated were erroneously assigned to the uninoculated, unless we can here fall back upon the suggestion which we have already dealt with in considering the case of the Khojas of Bombay, that anti-plague inoculation affords protection not only against plague but also against other diseases. We are unable to accept this suggestion as an explanation of the statistical data which we are considering, for we could not explain these data in accordance with this suggestion unless we assumed that the plague prophylactic conferred an even greater protection against diseases in general than that which it confers against plague.

Accurate deductions impossible from statistics of Khojas in Karachi.

On a consideration of all the circumstances, therefore, our conclusion is that the statistics compiled by Mr. Kaka cannot be accepted as giving even an approximately correct indication of the course of plague and the results of inoculation among the members of the Punjabhai branch of the Khoja community in Karachi, and it is not improbable that the statistics relating to this community have been seriously vitiated on account of the existence of some such tendency in Karachi as that which we indicated to have been in operation among the Khojas in Bombay, to do more than justice to inoculation. At any rate, the statistics are so untrustworthy that they are useless for the purposes of accurate scientific deductions.

Mr. Kaka's investigation sheets.

We have now to consider a group of figures which relates to the effect of inoculation in 56 plague-infected houses. The particulars concerning these have been collected by Mr. Kaka and put before us in the form of investigation sheets. These investigation sheets will be found in the appendix to Mr. Kaka's report on inoculation. Before proceeding to consider whether any deductions can be based on these, it is necessary to note a few points regarding them which have attracted our attention and which we think indicate that success has not been attained in collecting, for all the houses in question, all the data which are essential to

enable us to arrive at a correct judgment as to the incidence of plague among the inoculated and the uninoculated. We notice, for instance, that in the case of one house—that to which the investigation sheet bearing the number 38 in Mr. Kaka's appendix refers—the only residents of the house would appear to have been a girl of eight years of age who died of plague and a boy of five years of age. It is obvious that there must have been other people in this house, and, indeed, we learn from a note on the investigation sheet that there was, at least, their mother in the house with the two children. The investigation sheets numbered 2, 11, 15, 16 and 24 give us to understand that in each of the houses in question there was only one resident. In one case the sole resident was a young woman. In view of our knowledge of the customs of the natives of India with regard to family life and the coverture of women, we think it probable that these statements cannot be taken as accurately representing the condition of things in these houses. Moreover, we find that in the case of each of these houses the resident who appears in the records was an inoculated person who died. We think that we may from this fact infer that Mr. Kaka's investigation sheets were, in the first instance, compiled by checking from the register of inoculation the names of those who were reported to have been attacked or to have died of plague. We do not doubt that Mr. Kaka then proceeded to verify and complete the data thus obtained by actual visits to the houses concerned. But we think that, at the time of the inquiry, the rest of the inhabitants—and this relates in particular to the uninoculated inhabitants who were liable to be segregated—may very probably in many cases have run away, so that it was impossible to ascertain how many people had really lived in each house, and whether other cases of plague had or had not taken place there. Mr. Kaka himself, in the case of one or two houses, adds a note to the effect that full particulars could not be ascertained. Further, we find on going over the investigation sheets that, although there are six houses in which more than one case is recorded among the inoculated, there is no house in which more than one case is recorded as having occurred among the uninoculated. This can, we think, be explained only on the assumption that the uninoculated left their houses directly after plague appeared in them.

Investigation Sheets, Nos. 38 and 90.

Mr. Kaka's investigation sheets appear to us to have little value; first, because, as has been shown above, we have reason to believe that they are not complete records, and secondly, because the inoculated and uninoculated were not living under comparable conditions, inasmuch as the former remained in the infected houses, while the latter were removed from them as soon as a plague case occurred. Nevertheless, it will be of interest to summarise the data which are set down by Mr. Kaka. If we take into consideration the facts which are recorded regarding the whole of the 56 houses mentioned in Mr. Kaka's appendix, the results are as follows:—

	No.	Attacks.		Deaths.		Case Mortality per cent.
		No.	Per cent.	No.	Per cent.	
Uninoculated	76	17	22·5	12	15·7	70
Inoculated	285	47	16·7	25	8·9	53
Diminution of mortality due to inoculation					6·8	

If, on the other hand, we exclude 21 houses in which plague cases occurred only among the inoculated, and in which there is no record of the presence of uninoculated residents, we shall, on account of the elimination of houses in which there are no uninoculated controls, obtain from such materials as Mr. Kaka has furnished results which will have somewhat greater objective value.

The comparison thus instituted will then read as follows :—

	No.	Attacks.		Deaths.		Case Mortality per cent.
		No.	Per cent.	No.	Per cent.	
Uninoculated .	76	17	22·5	12	15·7	70
Inoculated . .	213	23	10·6	11	5·1	45
Diminution of mortality due to inoculation					10·6	

62. Inoculations were introduced into Bulsar, a town in the neighbourhood of Surat, in the early part of 1898. They were limited in their application to four wards of the town. Considerable inducements were offered to encourage inoculations, inasmuch as, in contrast with what was done in the case of the uninoculated, the inoculated were not segregated and were allowed at first to treat their sick in their own houses, and afterwards in special houses set apart in their quarters. Out of a total population of 1,190 in the four quarters concerned 1,018 were inoculated. The results of the inoculations are set forth in the following table compiled from particulars given to us by Assistant Surgeon Dadachanji, who did the inoculations :—

Inoculations at Bulsar.

Quarter.	Population taken into account.	Number inoculated.	Number uninoculated.	Percentage of plague attacks among		Percentage of plague deaths among		Case mortality (deaths to attacks) among	
				Inoculated.	Uninoculated.	Inoculated.	Uninoculated.	Inoculated.	Uninoculated.
Dheberwad . . .	180	170	10	2·4	0	0·6	0	1 in 4	0 in 0
Taiwad . . .	499	490	9	13·[illegible]	44·4	4·7	22·2	23in 65	2 in 4
Machiwad . . .	105	97	8	8·2	12·5	3·1	12·5	5 in 8	1 in 1
Ghanchiwad . .	296	261	35	2·7	11·4	1·5	11·4	4 in 7	4 in 4
Total .	1,080	1,018	62	8·2	14·5	3·0	11·3	31in 84	7 in 9

It is to be noted that the plague occurrences entered in this table all occurred after the completion of inoculations. It is further to be noted that the population under observation does not include the whole of the population of the wards. Mr. Dadachanji has in his figures for the population under observation left out of account 110 people out of the total population of the four wards, as 62 of these were children under two, 30 had had plague during a previous outbreak, and 18 were attacked by plague in the outbreak under consideration before inoculations were completed. Lastly, it is to be noted that the number of uninoculated persons who came under observation amounted to no more than 62. This number is so small that we may assume that it consisted in large part of persons who remained uninoculated because they were unfit for inoculation. The mortality among these might naturally be expected to be higher than in a normal community. As a matter of fact, we find that from May to December 1898, the 62 uninoculated lost 8 persons on account of deaths from general causes, while the 1,018 inoculated lost 10.

As far as we have been able to judge, Mr. Dadachanji's figures have been carefully collected. A census of the town was taken at the end of 1897, and a complete census of the inoculated wards was taken again at the time of inoculations. A list of the inoculated and uninoculated inhabitants was posted up on the door of each house, and each house is said to have been visited daily by a medical officer who had orders to satisfy himself regarding every person living in it, and to call out the inhabitants daily for inspection. In this manner, the number of plague cases and deaths, and their distribution between the inoculated and the uninoculated, were ascertained.

It will be seen from the table that the effect of anti-plague inoculation manifested itself here especially in the reduction of case mortality. When we take into consideration the fact that the uninoculated were a sickly community, we see that it is probable that inoculation exerted little, if any, effect in warding off plague attacks.

Comparisons between inoculated and uninoculated wards in Bulsar.

In addition to the comparison which has been set forth above between inoculated and uninoculated persons living in the same wards, we have, in Bulsar, in two instances data for comparing the course of plague in a ward which was almost completely inoculated "with the object," as Mr. Haffkine told us, "of seeing to what extent plague could be arrested by that," with the course of plague in a similar ward to which inoculations were not applied. The wards in question are two wards inhabited by Ghanchis, and two wards inhabited by Tais. In each case, in order to obtain the total population of the inoculated wards for comparison with the total population of the uninoculated wards, we may add together, in the case of the former, the whole of the inoculated and uninoculated residents.

Two Ghanchi wards in Bulsar.

We may consider first the case of the two Ghanchi wards. Our information concerning these was obtained from Mr. Dadachanji. The following table shows the incidence of plague among the Ghanchis in the inoculated and the uninoculated wards respectively :—

Ward.		Population.	Plague Cases.		Plague Deaths.	
			Number.	Percentage on population.	Number.	Percentage on population.
Ghanchis	Uninoculated Ward	154	23	14·9	16	10·4
	Inoculated Ward .	296	11	3·7	8	2·7

We have no details which will enable us to arrive at a judgment as to how far the two Ghanchi wards contained comparable communities. None the less, it is worthy of note that the above table shows a diminution in plague attacks of about 11 per cent. and in plague deaths of about 8 per cent. in favour of the inoculated ward. This estimate is based upon the census population of the two wards. We were, however, told by Mr. Dadachanji that there was a considerable exodus from the uninoculated ward, and that at least half the population left; on the other hand, it is said that no similar exodus occurred from the inoculated ward. In view of this, the advantage in favour of the inoculated ward would be practically double that which is set forth in the table.

Two Tai wards in Bulsar.

The next case we have to consider is that of the two Tai wards. The information at our disposal as to the inoculated Tai ward is derived from Mr. Dadachanji's evidence; the data relative to the uninoculated Tai ward were supplied by Major T. E. Dyson, I.M.S., who was in the Surat district in 1897 and 1898. We were assured by Major Dyson that the two wards were absolutely comparable. On the other hand, it would appear that both wards did not suffer from plague at one and the same time, so that the figures of the two wards may relate to outbreaks of different severity. A comparison, however, can be made as follows :—

Ward.		Population.	Plague Cases.		Plague Deaths.	
			Number.	Percentage on population.	Number.	Percentage on population.
Tais .	Uninoculated Ward .	492	65	13·2	47	9·5
	Inoculated Ward .	499	65	13	23	4·6

In spite of the fact that the prophylactic fluid was operative in reducing plague mortality by about 5 per cent., it appears that it did not sensibly reduce liability to attack by plague.

Inoculations in the Baroda State.

App. LII.

63. In the State of Baroda inoculations were introduced into a number of villages. Our information with regard to them is drawn from data supplied by Mr. Mehta, who was the medical officer in charge of plague operations in the State. This information is contained in Mr. Mehta's evidence and in a report which is published as an Appendix to our Proceedings. In 13 of the 31 villages into which inoculation was introduced there was no plague after inoculation. In them we have no materials for a determination of the effects of inoculation on plague. In 18 villages, cases of plague did occur after the inoculations. One of these villages was Undhera, where Mr. Haffkine personally superintended the inoculations, the results of which have already been considered in this Report. Excluding Undhera, there remain only 17 villages which come into consideration here. With a view to testing the accuracy of the figures which have been supplied to us with regard to the course of plague in these villages, we propose to consider only the figures which relate to the six villages in which plague cases occurred among both the inoculated and the uninoculated. The figures relating to these six villages may be collected together as follows:—

Village.	Population. Total.	Population. Uninoculated.	Population. Inoculated.	Total Plague Cases.	Total Plague Deaths.	Plague Cases after Commencement of Inoculations among Uninoculated.	Plague Cases after Commencement of Inoculations among Inoculated.
Savali . .	6,551	6,535	16	446	321	465	4
Billimora . .	5,350	4,918	432	277	217	228	26
Koili . . .	3,221	2,162	1,159	144	129	123	13
Jarod . . .	2,137	2,057	80	61	44	24	2
Bajwa . .	609	453	156	47	37	34	5
Kantharia . .	364	254	110	22	22	4	2

Mr. Mehta has, after adding in the figures which relate to the village of Undhera, summed up the results of inoculation which are tabulated above as follows: "The number of attacks per mille of population is 24·3 in inoculated, against 53·8 in the others, and of deaths, 55·4* against 46·9.* The results of Undhera, Koili, and Bajwa are very good, and of Billimora and Kantharia very fair. The effect in case mortality at Savali is also fairly good."

Criticism of statistics of villages in Baroda.

Before we can accept Mr. Mehta's conclusions, we must check against each other the figures given by Mr. Mehta in the various tables with which he has supplied us, and, further, we must check Mr. Mehta's figures by comparing them with figures given by other witnesses. It will suffice to notice a few of the points which have arreste dour attention in applying these checks. First, then, as to the total population. In the case of Billimora, we find that Mr. Mehta, on pp., 263, 265, 504, 517 and 520 of the Second Volume of our Proceedings, has given five different estimates of the population which vary from 5,215 to 5,577. Further, there are differences in the estimates of population furnished by Mr. Mehta and those furnished by other witnesses in the cases of Koili and Bajwa. Dewan Bahadur V. M. Samarth, Subah of the Baroda Division, and Mr. Shamsuddin J. Sulemani, the Chief Medical Officer of the State, stated that the population of Koili and Bajwa was 3,695 and 703, respectively, instead of 3,321 and 609, the figures given by Mr. Mehta. With regard to plague cases, we may notice in the first place that Mr. Mehta is in conflict with himself in respect of the figures he gives for Savali. It will be seen that he gives the total number of plague cases during the epidemic as 446, whereas he gives the number that occurred after inoculation as 469. Similarly, he is in conflict with himself in respect of the number of plague cases

* We presume these figures have been inadvertently transposed by Mr. Mehta.

that occurred after the introduction of inoculations in Billimora; in one statement he gives the number as 254 and in another as 156. Dewan Bahadur Samarth has given us the number of plague attacks that occurred in each of the villages entered in the table above, excepting Billimora. His figures in every instance disagree with those given us by Mr. Mehta. Thus Mr Mehta's totals of plague attacks for Savali, Jarod and Kantharia are 446, 61 and 22, respectively, while the totals of attacks in these villages according to Dewan Bahadur Samarth's figures are 507, 24 and 15, respectively. Moreover, Mr. Shamsuddin J. Sulemani gives us the number of attacks in Koili and Bajwa, and in the case of the former village he states that there were 117 attacks, in this differing from both Mr. Mehta and Dewan Bahadur Samarth, though, in the case of Bajwa, his figures agree with those of Mr. Mehta.

After these criticisms, it is obvious that we shall not be able upon Mr. Mehta's general statistics to base any accurate estimate of the amount of protection conferred by Mr. Haffkine's inoculation throughout the State of Baroda or in any particular Baroda village considered as a whole.

Mr. Mehta's investigation sheets.

We have, however, further to consider certain statistics which Mr. Mehta has prepared and which deal with the incidence of plague in particular groups of infected houses situated in certain of the villages of the State. The data which are furnished regarding these are in the form of a synopsis of investigation sheets for each of the three villages of Billimora, Koili and Kantharia. They may be tabulated as follows:—

Village.	Number of houses to which data apply.	Number of inoculated	Number of uninoculated.	Percentage of attacks among		Percentage of deaths among		Percentage of case mortality among	
				Inoculated.	Uninoculated.	Inoculated.	Uninoculated.	Inoculated.	Uninoculated.
				Per cent.	Per cent	Per cent.	Per cent	Per cent	Per cent.
Billimora	64	105	249	25	30·4	15·2	24·8	60·6	81·7
Koili	26	48	73	27	24·7	18·8	23·3	694	94·5
Kantharia	3	4	14	50	28·6	50·0	28·6	100·0	100·0
Total	93	157	336	26	29·4	17·2	28·0	66·0	95·0

We have not been supplied with any materials for effectively criticising these investigation sheets, for we have not been informed how they were originally prepared, how the numbers of the inoculated and the uninoculated in the various houses were ascertained, and what steps were taken to secure that entries were properly made. We learned, however, that the facts set down on record were not always elicited by personal inquiry, and our general impression is that the inoculation sheets were not actually prepared on the spot and therefore cannot be trustworthy. Nevertheless, we may note two points regarding the results set down. The first of these is that the inoculated residents of the plague-infected houses under investigation appear to have been almost as liable to attack as their uninoculated fellows. The second point is that, inasmuch as inoculation considerably reduced the severity of attacks, there was a diminution of mortality amounting to 11 per cent. in the number of the inoculated, as compared with the uninoculated.

Inoculations in Baroda City.

The figures which have been supplied to us regarding inoculations in the City of Baroda afford us no help in coming to a conclusion as to the value of inoculations in general. Two thousand seven hundred and twenty-five people in all were inoculated in the City. Of these 2,146 were residents of the City, which has a population of 112,471; the balance of 579 inoculated persons consisted of

prisoners. These prisoners may be left out of account, inasmuch as there was no case of plague in the Jail or anywhere near it. As to the other persons inoculated, it is to be noted that no plague occurrences were recorded among them, but we have nothing to show that they were kept under observation. So little was known of them that in the case of 822 persons no information of any kind is available as to their caste or social position. Plague occurrences may have taken place among them without being brought to the notice of the authorities as having occurred among inoculated persons.

Inoculations in Baroda Cantonments.

In concluding the consideration of information collected by us at Baroda, we have to deal with the facts which Major Sarkies, I.M.S., Residency Surgeon at Baroda, gave us with regard to inoculations in the Baroda Cantonment. Plague appears to have been severe in the Cantonment in March, and to have then declined until September and October, when it again became severe, and though we have not been informed of the exact dates of the inoculations, we understand that a large number were done in March, another large number in September and October. Major Sarkies told us that a total of 2,048 persons were inoculated between November 1897 and December 1898, and that of these 330 were soldiers and their families, while the remainder were civilians. As to the uninoculated, Major Sarkies told us that "there were about 600 not inoculated in the regiment, including the families, and about 1,000 in the bazar." The strength of the inoculated and uninoculated respectively was computed by simply subtracting the total number of inoculated persons from the total population of the Cantonments, which was apparently known to have been about 4,000 One hundred and nineteen cases with fourteen deaths were reported to have occurred among the uninoculated, while the inoculated were reported to have had only 13 cases with 4 deaths, and Major Sarkies thinks that "that is a marked difference, as over half the people were inoculated." He, therefore, formed a strong opinion that inoculation was beneficial.

Examination of these figures shows that they make no pretence to accuracy. Moreover, as the period covered by the inoculations was clearly a prolonged one, no comparison between the inoculated and uninoculated is possible, except by comparing the incidence of plague upon the average strength of each class. But we do not know the period of observation during which the cases and deaths occurred. Further, we are unable to determine the average strength either of the inoculated or of the uninoculated, and this is a matter of considerable importance, as about a quarter of the whole number of the inoculated are said to have left the Cantonments, and there was probably an exodus among the uninoculated also. We can, therefore, make no accurate comparison between the inoculated and the uninoculated, but we see no reason to reject the opinion offered to us by Major Sarkies in favour of inoculation after an extended observation of its results in the Baroda Cantonment.

Inoculations in the Punjab.

64. Inoculation was not an important feature of the plague policy applied to the Punjab. The population of the villages in which plague appeared, up to the end of September 1898, was about 92,000, but the number of people inoculated in these villages was small. As is stated by Captain James, I.M.S., in his report on the Punjab, "in the two infected areas there were 3,918 people inoculated. Among these there were eight attacked with plague in the Jullundur district and only one died, and that a woman who was proved to have had an insufficient dose of prophylactic." In the Jullundur district the number of the inoculated amounted to 2,408, while in the Hoshiarpur district the number was 1,510. The people were unwilling to submit to a second inoculation, and we are told that only 103 were inoculated twice.

In considering the details which have been placed before us regarding these inoculations, we find that the prophylactic fluid was not much used in the Punjab under conditions which put it to any considerable test of its efficacy. Thus we find that of the inoculations done in the Jullundur district, 244 were done in the village of Thandian and 372 in the village of Dasanjh, where there was no plague. Moreover, 209 were done in Khatkar Kalan in a camp of 600 people in which no plague occurred after the inoculations, except in the case of one inoculated person, who probably had been infected before

his inoculation. Similarly, although a number of people—variously stated as 801 and as 820—were inoculated in Garhshankar, out of a population of 5,000 to 6,000, we find that the inoculations were not done till the 11th May, and the plague outbreak in the place had by that time practically ceased; for out of a total of 152 plague cases which occurred among the people of the town, only five occurred after the inoculations were begun.

Inoculations at Banga, in the Punjab.

Banga Town is the only place in the Punjab regarding which we need go into any details of the progress of inoculation and the course of plague. The first case in this town occurred on the 7th March 1898, though the authorities did not hear of the existence of the disease until the 11th of that month. The last case took place on the 20th June, and the total number of attacks was 103, with 65 deaths. A census of the population was taken in March, and showed that there were 4,917 residents of the village. Evacuation, disinfection, and inoculation were all commenced on the day when plague was discovered and were completed about the 29th of April. As the people did not at first show themselves very willing to come forward for inoculation, the inoculations proceeded gradually. On April 30th, the number of the inoculated amounted in all to 865. It is remarkable that among the inoculated in Banga a very large number of children under 10 were included. Such children numbered 292, or more than 33 per cent. of the total number of the inoculated—a proportion which is very different from that noticed in other places.

Captain James, in commenting upon the results obtained in this village, remarks that 2·18 per cent. of the whole population were attacked, while the attacks among the inoculated amounted to ·69 per cent., and all the inoculated had the disease very mildly. In a case like this, however, more correct results could have been arrived at by calculating percentages upon the average strength of the inoculated and uninoculated respectively. We have not before us materials which enable us to do this.

List of plague infected families in Banga and investigation sheets put in by Capt. James, I.M.S.

In addition to summing up the results for the village as a whole, Captain James has given us a list of all families in Banga in which plague cases occurred. This list shows the number of inoculated and uninoculated persons in the families and of the plague occurrences among them. In the case of houses in which inoculated persons were attacked, Captain James has supplemented his list by fuller details in the form of investigation sheets. An examination of the list shows that while details are given with reference to 81 families, the 103 attacks which took place in the town were distributed over 70 families only. A summary of particulars regarding all the families entered in the list is given below in tabular form, but we may point out that a statement of this sort is of no value unless we can assume that the cases among the uninoculated all occurred after the members of their households, who are set down as inoculated, had already undergone the operation:—

—	No. of Houses.	Inoculated Residents.		Percentage of Attacks on Total Number.	Uninoculated Residents.		Percentage of Attacks on Total Number.
		Total number	Number attacked.		Total Number.	Number attacked.	
	7	10	0	—	19	0	—
	2	7	0	—	0	0	—
	2	0	0	—	12	0	—
	1	3	1	—	0	0	—
	43	0	0	—	143	55	38·5 p.c.
	26	54	5	9 p.c.	107	42	39·2 p.c.
TOTAL	81	74	6	—	281	97	—

When we collate with data set down in the general list of affected families the particulars which Captain James has given in his investigation sheets for the six houses in which inoculated persons were attacked, we find that the particulars in the cases of the houses referred to in the investigation sheets numbered 1, 3, and 5, do not agree with the details which have been given us in the general

list. For instance, the investigation sheet numbered I. states that the house to which it relates contained two inoculated persons, of whom one was attacked, and three uninoculated persons, of whom two were attacked; but the general list of families shows that in the family in question there were three inoculated persons, of whom one was attacked, and two uninoculated persons, who were both attacked. It is unnecessary to set forth here the similar discrepancies which occur between the details given in the investigation sheets and in the general list of families in the case of the other two houses of which the particulars are not the same in these two statements. It appears, in view of the discrepancies just referred to, either that one or the other of the two statements sets forth the facts of the case incorrectly, or, perhaps, that one statement refers to the number of people who occupied the houses in the town before evacuation, and the second to the number of persons who occupied various huts in camp after evacuation. Whatever the explanation of the discrepancies may be, these discrepancies are such that we cannot use the investigation sheets laid before us as the basis for accurate conclusions as to the amount of protection conferred against attack. But the fact that all the six cases of plague which occurred among the inoculated ended in recovery is of itself evidence of the beneficial effect of inoculation.

Inoculation of disinfecting gangs in the Punjab.

In the Punjab special attempts were made to protect by inoculation persons who were engaged in working on disinfection gangs, and were thus subject to great risks of contracting plague. But the exact numbers of the disinfecting staff who were employed, and their distribution among inoculated and uninoculated, are unknown. Regarding the disinfectors employed in the Jullundur District, we have no full particulars. We are, however, told that the inoculated had one genuine case of plague and one case regarding which it was doubtful whether it was plague or not. As to Hoshiarpur, we are told that cases among the disinfecting gangs occurred in every village that was being disinfected, but that, after inoculation had been introduced into the gangs, cases occurred only among the uninoculated disinfectors. After the inoculations, there were only three cases, one in each of the gangs employed at Garhshankar, Garhi, and Bilron. In the Garhshankar gang there were about 800 coolies, of whom 700 were inoculated; in Garhi, out of 80 coolies, 60 were inoculated; and in Bilron, out of about 60 coolies, 9 were inoculated. The total number of the uninoculated was, therefore, 170 as compared with 770 inoculated coolies, and the fact that the 170 uninoculated had 3 cases, while the 770 inoculated had no cases, is some index of the efficacy of inoculations.

Inoculations in Belgaum town.

65. We may now return to the consideration of the results obtained by inoculation in Southern India, and in this connection we may consider in particular the facts put before us regarding Belgaum, Satara, and Alibag.

Inoculations were introduced into the town of Belgaum in December 1897, and the period of observation covered by the figures which have been supplied to us regarding inoculated persons extends over one year, to the end of December 1898. This covers the two periods of very severe plague mortality. Plague did not reach the town till the end of November 1897. It was most severe during January 1898, and died out in the second week in May. Another outbreak commenced very shortly afterwards in July 1898, and this, after attaining its period of greatest severity in October, ceased in January 1899. The officers personally responsible for the work connected with the inoculations and the maintenance of the records of inoculated persons did not appear before us as witnesses. The information with which we were supplied was given to us by Mr. Carmichael, the Collector of the district, Colonel Peters, I.M.S., Civil Surgeon, and Mr. Uchgaonkar, the Chairman of the Belgaum Municipality.

Statistics regarding inoculations in Belgaum.

We learn that inoculations began on 26th December 1897, but we are left in some doubt as to the exact number of persons who were inoculated. Mr. Uchgaonkar put in a statement showing this number to be 3,438, but he withdrew that statement, and supplied us with another, printed in his evidence. In this statement the number of persons operated upon in Belgaum is represented by the tota of 3,447, of whom a total of 2,565 are shown as belonging to the town itself, while

292 are entered as residents of the Cantonment, and the rest as residents of other places. We find, however, that the details given in the statement of the number of inoculated residents of Belgaum town total up to 2,456. Between the date of the commencement of inoculations and the 15th January 1898, inoculated persons were not liable to segregation or removal to hospital, but after the 15th January the ordinary plague measures were applied to the inoculated in the same way as to the uninoculated. The result of this withdrawal of the privileges at first conferred was, says Mr. Uchgaonkar, "to put almost a complete check to further progress of inoculation." The statement put in shows that of the total operated upon, 1,466 persons were inoculated between the 26th December 1897 and the 16th January 1898, and that only 1,000 persons submitted themselves to the process in the next 11½ months, of whom about 450 were done in the last fortnight of September. The number of inoculations performed in the town, which has a normal population of about 30,700, was thus very small, but it is apparent that the majority of those inoculated were operated upon before the climax of the first outbreak, and that practically the whole of the inoculated were operated upon before the second outbreak became severe.

Criticism of statistics for Belgaum town, 23.137.

No attempt has been made to work out estimates purporting to be accurate with regard to the relative amount of protection which inured to the inoculated when compared with the uninoculated. But we have been informed that of the people inoculated 61 or 62 were attacked and 33 died. We do not, however, lay any stress on these figures, for we have it in evidence that the reporting of cases during the first outbreak left much to be desired, and though the people, it is said, "gave information" during the second outbreak because they were not removed to hospital, our general experience of plague statistics in India leads us to believe that this information can hardly have been complete. Moreover, even if it were the case that occurrences of plague were not concealed, we have good reason to believe that, when they occurred in inoculated persons, they were not always correctly assigned to the inoculated. The information which has been prepared and supplied to us regarding the number of the inoculated who were attacked was not, it would appear, compiled from inquiries made at the time of the attacks. We understand that the register of plague attacks and deaths was, some time before our visit to Belgaum, collated with the inoculation register. When a name which appeared in the inoculation register appeared also in the register of attacks, the case in question was entered up as occurring among the inoculated. When, on the contrary, a name which appeared in the inoculation register was not found in the register of attacks, the person in question was, unless other evidence to the contrary was forthcoming, assumed to have escaped infection. It is clear from the evidence which we have recorded that the statistics thus collected were far from correct. Mr. Carmichael said:—"It is very difficult to identify the inoculated people in several cases, because there was often a single name entered, and very little else. A certain proportion is like that. In other cases the name, the number of the house, and the occupation of the person are entered in our inoculation register. They are arranged alphabetically; and we went over our attack register and death register and checked the names. That is the way we did it. . . . The attack and death register gives the streets and houses; and it also is supposed to say whether a man was inoculated or not. That, however, has not always been given." Mr. Carmichael added that in a few cases nothing but the name of the person inoculated had been entered in the register of inoculated persons. Colonel Peters, after an inspection of the registers relating both to the town and the Cantonment, told us that, in the case of the town, entries in the register regarding the residence of the inoculated were made "in a general way . the street had been entered, and sometimes the number of the houses also"; but he had not examined the books closely enough to say whether in all cases the residence was noted in the town registers. The town registers, however, were very similar to those of the Cantonment and similarly kept up. Therefore it is probable that mistakes found by Colonel Peters in the Cantonment registers appeared also in the town registers. He informed us that "in the Cantonment some names were not put down at all, but it was simply stated that a certificate was given to a sepoy of the 26th Madras Infantry. . . . I should like

to state that in one case a woman left the camp with a certificate of Major Minchin that she had been inoculated, and it was found on inquiry that her name was not on the register. In other instances I have recently (in the beginning of 1899) found that transport mule drivers and dooly-bearers, of the Commissariat, who had been inoculated, are not recorded in the Cantonment registers," although their inoculation papers were dated in September, October and November 1898. He added that "In the nominal roll of inoculated persons in the Belgaum Cantonment who have got plague, I have a number of names which have been recorded who came to the Civil Hospital after having plague, and from inquiries I found out that they had been inoculated, but the names cannot be found in the inoculation register." That names were omitted from the town as well as from the Cantonment registers is clear from the following cases, of which Colonel Peters told us. In the special inquiries which he made in the case of four houses in the town, which we shall presently consider, he found that the inoculation of 2 out of 10 persons said to be inoculated was incapable of verification. Further, he stated that 11 inoculated persons from the town and 49 from the Cantonment came to the hospital suffering from plague. Three only out of the 49 who came from the Cantonment could be traced in the registers as inoculated, and only 8 out of the 11 who came from the town could be similarly traced. We are, however, without exact information as to the actual extent to which the accuracy of the figures was affected by the causes of error which existed, and in these circumstances it is impossible to accept the statistics with which we have been supplied as even approximately correct. Any attempt to draw accurate deductions from them would be fruitless.

In addition to the facts and figures which have been given us regarding inoculations in the town of Belgaum, as a whole, we have been supplied with particulars regarding inoculations in several different groups of persons living in Belgaum. These particulars relate, firstly, to the troops stationed in the Cantonment; secondly, to two groups of persons who came under the observation of Major Forman, R.A.M.C.; and, thirdly, to the residents of four houses regarding whom special inquiries were made by Colonel Peters, I.M.S.

Inoculations in the 26th Madras Infantry at Belgaum.

We may consider first the case of the troops. The regiment regarding which we have particulars is the 26th Madras Infantry. The first recognised case of plague in this regiment occurred on the 12th November, 1897, and the patient died on that day. Between this date and the 21st November, a period in which the regiment remained in its lines, there were 13 attacks of plague among the troops, families, and followers. On the 22nd November steps were taken to evacuate the lines, and evacuation was completed on the 28th November. During the period in which evacuation was proceeding, 15 attacks of plague took place. The whole regiment with its families and followers was moved into camps outside the town, and in the 10 days following this removal to camp, 13 sepoys and 21 members of their families and followers were attacked. After this, the cases fell off in number from the 8th December, and only one or two attacks were occurring weekly by the time when Major Bannerman, I.M.S., arrived and proceeded to commence inoculations on the 23rd December 1897. By this time there had been altogether 73 cases and 49 deaths from plague in the regiment. Out of the total population of 1,746, 1,665 were inoculated, and 81 only remained uninoculated. Immediately after inoculations were completed on the 6th January, the regiment went back to the disinfected lines, and during the rest of the period of the first outbreak in Belgaum, including the period in which that outbreak reached its height, there were only two attacks in the regiment, one in a sepoy and one in a European officer, both of whom had been inoculated. The regiment remained free from plague until the second outbreak took place in Belgaum. On the reappearance of plague in the town, the troops, families, and followers were re-inoculated at their own request, and at the end of the re-inoculations 1,801 persons had been inoculated. As men came back from time to time from furlough or recruiting duty, or as the families which had been absent during the first inoculations returned to the lines, they were inoculated, and after completion of the second series of inoculations there can have been very few inhabit-

ants of the lines who had not been operated upon. The number of these is indeed stated to have been less than 81. It is probable that the real number of uninoculated persons living in the lines was unknown, and that, as in the case of the troops at Bangalore, the uninoculated cases may have occurred among persons who visited the lines and were discovered to have plague there. Whether this was so or not, it is obvious, from the fact that the bulk of the uninoculated were people who had just joined the regiment, that the uninoculated cases must have occurred among persons who contracted plague while they were not living under the same conditions as the inoculated, and who may have been more exposed to risks of infection. The regiment therefore does not contain satisfactory controls enabling us to compare the occurrences of plague among the inoculated and the uninoculated respectively, as a method of gauging the advantages of inoculation. Nevertheless, it will be of interest to consider the course of plague during the second outbreak in the regiment.

Course of plague in second outbreak among 26th Madras Infantry at Belgaum.

We have before us two statements of what occurred during the second outbreak. One of these is that of Major Bannerman, who has dealt with the whole period of the outbreak; and the second is that of Lieutenant Lethbridge, I.M.S., who was employed in inoculating the regiment the second time, and was able to observe what occurred during a period from the 5th September to the 15th October while he was at Belgaum. Major Bannerman's account differs from that of Lieutenant Lethbridge with regard to the date on which the re-inoculations were done, for whereas the former states that they were begun on 18th August and completed by the beginning of September, Lieutenant Lethbridge, who performed the operations, informed us that they were commenced on the 10th September and completed in about ten days. Moreover, Major Bannerman informed us that the second outbreak lasted from July to December, and that the inoculated had nine cases with three deaths; while the uninoculated had three cases all fatal. The number of cases among the inoculated was, he said, one only in each of the months of July, September, November, and December, with two cases in August and three in October; while the number of cases among the uninoculated occurred one in each of the months of September, October, and November. According to this account, therefore, during the whole of the months of September and October there were altogether four cases among the inoculated, and two among the uninoculated. But Lieutenant Lethbridge has told us that in the five weeks of September and October during which the regiment was under his observation eight cases of plague with five deaths occurred among the inoculated, and that about the same number of suspicious cases also occurred, in which "they did not exactly know whether it was plague or not." Of these latter four died. Lieutenant Lethbridge also says that, in the period to which he refers, no cases occurred among the uninoculated, as there were no uninoculated. Major Bannerman was not with the regiment during the second outbreak. We therefore found some difficulty in accepting his figures in face of the evidence given before us by Lieutenant Lethbridge who had the regiment under his immediate observation while he was at Belgaum. This difficulty has been to some extent removed by the fact that the figures produced by Major Bannerman are vouched for both by him and by Lieutenant-Colonel Bennett, I.M.S., who was in charge of the regiment. But, nevertheless, the method of the compilation of the figures given by Major Bannerman would, in face of Lieutenant Lethbridge's evidence, require to be more fully investigated before those figures could be accepted as absolutely correct. As they stand, in view of the possibility that they do not include every case that occurred, and in view of the probable incomparability of the inoculated and uninoculated communities in which the recorded cases occurred, and in view, further, of the fact that the numbers of the uninoculated are not accurately known, we are unable to accept the comparison based on them by Major Bannerman to show the relative liability to plague of the inoculated and uninoculated, respectively, within the regiment itself. Another comparison, however, has been made by Colonel Bennett and Major Bannerman in a paper published in the *Indian Medical Gazette* for June 1899. This comparison is between the number of cases that

occurred in the regiment in the first outbreak and the number that occurred in the second outbreak. In the first outbreak there were in all 80 cases; in the second outbreak there were only 12. In view of the fact that the sanitary measures adopted in both outbreaks were similar, except only in respect of inoculation, and that the plague in the town of Belgaum was, during the second outbreak in the regiment, much more severe than the plague which prevailed in the town during the first outbreak in the regiment, it would hardly appear to be open to doubt that the practical immunity of the regiment during the second outbreak was due to inoculation.

Groups of persons observed by Major Forman, R.A.M.C.

The groups of persons concerning whom Major Forman, R.A.M.C., gave us evidence, were his private servants, and the hospital attendants of the Belgaum Station Hospital with their wives and children. He inoculated these groups when plague first broke out in the town, and was able to keep in touch with them continuously after that time. Regarding the first group, he says, bringing down their history to the 3rd March 1899 :—"Of my private servants there were in all, including their wives and children, 28 people inoculated. There have been no cases of plague, and no deaths up to date. There were three uninoculated. One was a child of nine years of age, whose father refused to allow it to be inoculated. It died of plague 12 days after the other people were inoculated. I diagnosed the case myself as plague. The other two cases that were not inoculated were not so distinctly under my own observation. One was a sweeper employed in the Cantonment as a Municipal sweeper, the husband of my sweeper woman, and sleeping in my compound. He, I am told, died of plague some months afterwards. The other was my bhisti (water-carrier). He threw himself into a well. I was informed that he had buboes and fever, and ran away to escape segregation. Of the 28 inoculated, none died of plague; and of three uninoculated, two are said to have died of plague, and one undoubtedly died of plague."

Regarding the second group of which he gave us particulars, Major Forman said that, out of 90 hospital servants, 87 were inoculated. Of the inoculated persons one died from fever and endocarditis, and one died of plague. Excepting these two, the rest of the inoculated were alive and well in March 1899. Only three persons remained uninoculated. Of these, one was not operated upon because she had recently been delivered, another was not operated upon because she was pregnant, and the third was a boy of 16 years of age, whose father refused to let him be inoculated. The boy died of plague less than two months after the inoculation of the rest of the hospital servants had been done. One of the two uninoculated women died of plague two days after the boy, she having been in attendance upon him while he was sick with plague. The other uninoculated woman remained well.

These particulars, which Major Forman has given us regarding persons who came under his special observation, are interesting, but we cannot attribute as much importance to them as to statistics collected over a larger area. While it is clear that isolated instances, like these, tell in favour of inoculation, it is equally clear that other isolated instances might tell against inoculation and that these could be obtained with little difficulty. A large number of such instances could, we may note, have been selected from the investigation sheets which Mr. Kaka put before us at Karachi. While, therefore, we have set forth the facts observed by Major Forman, we cannot consider that isolated cases of this kind are useful as a basis for deductions of general application. These cases, however, were not in the least cases which were selected to demonstrate the advantages of inoculation, and they are, for this reason, worthy of some weight in our consideration.

Groups of persons observed by Colonel Peters, I.M.S.

The third group of cases which we have to consider in connection with Belgaum is that which relates to four houses inhabited by inoculated and uninoculated persons, for which Colonel Peters collected special information. These four houses con-

tained 10 inoculated persons, of whom four got the plague and all recovered. Five persons who were uninoculated were residents of the houses, and there was no case of plague among them, but it is to be remarked that one of these uninoculated people was a child aged only three years, and another was a baby eight months old.

Inoculations in Satara town.

66. The inoculations that were done at Satara do not require more than a brief notice, and it will be convenient to consider them here. Intelligent members of the native community co-operated with the district authorities in recommending inoculations; public meetings were held to bring its advantages to the notice of the people, and the police were inoculated; people from infected places were removed to segregation or health camps unless they submitted to inoculation. Captain Thompson, I.M.S., who was in medical charge of the district, says of inoculation that "the people of Satara only resorted to it when we brought statistics before them to prove its great virtue," but the total number of people inoculated amounted to only 708 out of a population of nearly 26,000, and Colonel Hay, the Chief Plague Authority in Satara, told us that, in spite of inducements, the people showed no desire to be inoculated. We are informed that of the inoculated only three died, all on the first day after inoculation, and Captain Thompson has given us a table in which he compares the incidence of plague among the uninoculated people who were segregated with the incidence among the inoculated people in certain wards which were infected and had to be evacuated. The non-inoculated were removed, and the inoculated were allowed to remain in or return to their houses. The table which Captain Thompson furnishes is as follows:—

22,393, 22,390, 22,155, 22,480.

Name of Ward.	No. of Houses.	No. of Infected Houses.	Population.	No. of Persons inoculated.	After Segregation among the Non-inoculated.		After Inoculation among Inoculated.		Remarks.
					No. of Plague Cases.	No. of Plague Deaths.	No. of Plague Cases.	No. of Plague Deaths.	
Durga	78	2	333	60	3	2	...	...	Evacuation commenced at the beginning of November and inoculations were done about the same time. No case since 17th January.
Raviwar	68	13	292	107	13	10	1	1	Inoculations were done about the beginning of December when the ward was evacuated. No case since 6th December.
Pantachakote	75	12	160	83	10	7	2	2	Evacuated on the 10th November. Inoculations were done between 11th November and 11th December. No case since 24th November.
Totals	221	27	785	250	26	9	3	3	

In all these wards the period of observation extends to the 31st March 1899. The data, however, are not complete enough to supply a basis for any estimation of the effects of inoculation, inasmuch as the table does not give the total number of attacks among the uninoculated in the wards, but only the number of attacks that took place among such uninoculated persons as were

removed to segregation camps. Colonel Hay stated his opinion that the uninoculated people who went away from Raviwar Ward had plague among them, but he is unable to give the number of attacks or deaths, and there was probably more plague among the uninoculated inhabitants of the wards than would appear from Captain Thompson's figures.

22,160.

67. The last of the inoculations that we have specially considered in our survey of the results of inoculation, are the inoculations done in Alibag, near Bombay. The evidence which has been laid before us regarding these inoculations relates in the first place to general results in the town, and in the second place to the results of inoculation in certain households concerning which, Mr. Arthur, the Collector of the district, has furnished special information.

Inoculations in Alibag.

The outbreak, during which inoculations were applied to the town of Alibag, commenced on the 24th December 1898 and had not ceased by the 20th March 1899, when Mr. Arthur gave his evidence before us. Inoculations were commenced on the 2nd February 1899, and though the people were at first afraid of it, a certain number were afterwards induced to submit to the operation. The plague policy which was adopted was similar to that adopted in many other districts. The uninoculated were evacuated from their houses; the inoculated were allowed to remain. A peculiar feature of the plague policy adopted was that at the outset inoculation was withheld from the inhabitants of infected houses. Mr. Arthur says: "When infection was first introduced in Alibag, I did not allow the members of infected families to be inoculated, lest the plague should be incubating in them, and lest their death from plague should be wrongfully assigned to the effect of inoculation; but latterly, inoculation having become more popular, I have revoked this order and have allowed the families to be inoculated, and then allowed them to go to their homes instead of being segregated." The result of this policy was that in a short time after plague broke out the town was occupied only by inoculated people, and by a few uninoculated people who were about to be inoculated. The number of inoculated persons who, according to Mr. Arthur's estimate, were living in the town at the end of March, was about 700. The other inoculated persons were, we presume, living outside the town. Mr. Arthur informs us that there were only 40 uninoculated residents in the middle of February, and only 20 at the time of his examination, but that the number of uninoculated was not definitely known. It would seem probable that there cannot have been many more uninoculated in the town, for orders were issued that "no one uninoculated should sleep in the town, and that those who did so would be prosecuted if discovered." These orders seem to have been strictly enforced and prosecutions were actually resorted to. Before proceeding to consider the results of these inoculations, we may briefly summarise the conditions under which the inoculated and the uninoculated were living. Inside the town, and presumably under conditions that were favourable to correct observation, was living a community of 700 inoculated persons among whom were interspersed a few uninoculated persons. Outside the town there was a large community consisting chiefly of uninoculated persons over whom the supervision of the authorities was probably not very strict. The community inside the town was, by the nature of the case, more exposed to plague infection than the community outside; but, on the other hand, there had been excluded from the former community, as we have seen above, most of the contacts who, of course, were most liable to develop plague.

Up to the date of Mr. Arthur's examination the inoculated were reported to have had only two deaths from plague. Up to the same date, reckoning from the 31st January, which practically corresponds with the date of the commencement of inoculations, 54 attacks from plague had occurred among the uninoculated. We can arrive at no conclusion from these statistics, for we have not been informed what was the average strength of the inoculated and the uninoculated during the period of observation, and further we are left in doubt as to whether the figures regarding plague occurrences are to be referred to the

Criticism of results for Alibag as a whole.

numbers of inoculated and uninoculated living inside the town or to the total number of inoculated and uninoculated, both inside the town and in camps outside it.

Special cases showing effects of inoculation in Alibag.

In these circumstances it is unnecessary to dwell further upon the statistics which Mr. Arthur has given us for the town generally, and we may pass on to notice the special instances which he has laid before us of households in which inoculated members escaped while uninoculated members got plague. These may be quoted in Mr. Arthur's own words. Mr. Arthur says: "The first instance I can give is this: On 21st February there were in the police lines about 130 inoculated persons, and about 21 uninoculated. They were being gradually inoculated, but these 21 had remained till the end. One of these, Rakmi, wife of Gangnak, Head Constable, was attacked with plague on the above date and died on the 22nd. Another, Rama Shripatrao Sinda, was attacked on the 18th and died on the 24th—two cases. The remaining persons then uninoculated were inoculated within the two or three days following, and though 150 persons have since been living in the lines, and are living there now, there has only been one other case of plague there. This was Parbati, wife of Ragnak Rannak, who, having been inoculated a fortnight previously, was attacked with plague on the 8th of March. She had high fever one day, was better the second day, and on third day she was almost well; and within a very few days was restored to perfect health. Beyond that there has not been another case in the police lines. . . . . . The second instance I wish to bring to notice was also a striking one. A Koli family of seven members was living in the town, of which six members had been inoculated in February. The remaining one, Hasu, wife of Nathu, having been delivered of a child only two months ago, was uninoculated. She caught the infection about the 8th instant, and died on the 14th in hospital. None of the other members of the family were affected, and the child was weaned from her, inoculated, and is now thriving. The third instance is also that of a Koli family of three members living together in the town. Of these, two were inoculated on the 9th and 17th February respectively. The third, a little girl of 12 years of age, who was to be inoculated later, was attacked with plague on the 1st instant, and died on the 3rd. The other two members were not affected. The fourth instance is that of a family of goldsmiths living in the town. Govindshet was inoculated in February. His daughter, Rembai (uninoculated), was attacked on the 7th instant, and died on the 8th. His wife, Bhagirthi, was inoculated the same day, and has not been affected. The fifth instance is that of a Musalman family of eight; of these, three were inoculated in February. Ismail, the son of one of them, 11 years of age (uninoculated), left Alibag on the 2nd and showed symptoms of plague on the 4th. He died on the 14th. The remaining members of the family were inoculated on the 4th, and none of the seven members now remaining have been attacked. . . . Three were inoculated before the first case occurred and the remainder were inoculated on the case occurring."

As in similar cases considered in connection of the effects of inoculation in Belgaum, we think it would be unsafe to found on special instances of this kind any general conclusions as to the amount of protection conferred by inoculation.

Synopsis of more trustworthy statistics criticised above.

68. We have now brought to a conclusion our critical survey of the data laid before us regarding the effects of inoculation. We have omitted from our survey only data such as those relating to inoculation among the Parsees of Broach, and among various groups of persons in Bombay, the detailed criticism of which would not, in our opinion, further the object we have in view. We will therefore now set forth the general conclusions with regard to inoculation which can be drawn from the body of evidence that has been submitted to us. It will facilitate matters if, before proceeding to undertake this task, we collect here in tabular form the statistical results which seem to us to be specially worthy of consideration. These results are as follows:—

FIRST SYNOPTICAL TABLE.

Name.	Population under Observation.	Percentage of Plague Attacks on Population.	Percentage of Plague Deaths on Population.	Case Mortality (expressed in Percentages in Cases where the Number of Attacks exceeds 100).	ADVANTAGES ACCRUING FROM INOCULATION. Diminution of Plague Attacks in every 100 of the Inoculated Population.	Ratio of Plague Attacks among the Uninoculated to Plague Attacks among an equal Number of Inoculated.	Diminution of Plague Deaths in every 100 of the Inoculated Population.	Diminution of Mortality among Inoculated as calculated according to Mr. Haffkine's Method of Calculation.	Ratio of Plague Deaths among the Uninoculated to Plague Deaths among an equal number of Inoculated.	Ratio of Fatality in Plague Attacks among the Uninoculated to Fatality in an equal Number of Plague Attacks among the Inoculated.	REMARKS.
1	2	3	4	5	6	7	8	9	10	11	12
Byculla Jail	Uninoculated . 172	4·	1·1	2 in 7	3·4	6·6 to 1	1·1	100	—	—	Only cases that occurred after the 4th February are included in this calculation.
	Inoculated . 152	·6	—	0 in 1							
Umarkhadi Jail	Uninoculated . 203	4·4	2·5	5 in 9	2·9	3 to 1	2·5	100	—	—	The percentages are taken on the original numbers of the inoculated and uninoculated.
	Inoculated . 199	1·5	—	0 in 3							
Undhera	Uninoculated . 437	6·4	5·9	26 in 28	4·9	4·2 to 1	5·3	89·6	10 to 1	2·5 to 1	One of us, Dr. Ruffer, is of opinion that these figures are not trustworthy.
	Inoculated . 513	1·5	·6	3 in 8							
The troops at Bangalore	Uninoculated 2,454	1·7	1·5	7 in 8	·6	1·5 to 1	·8	53·3	2·1 to 1	1·4 to 1	
	Inoculated . 446	1·1	·7	18 in 26							
Bulsar (4 Wards)	Uninoculated . 62	14·5	11·3	7 in 9	6·3	1·8 to 1	8·3	73·6	3·7 to 1	2·1 to 1	
	Inoculated 1,018	8·2	3·	31 in 84							
Lanauli (C. and D. Wards)	Uninoculated . 330	8·8	5·4	46 in 69	7·5	6·8 to 1	4·6	85·2	6·7 to 1	1·5 to 1	The figures relate to the period from the 5th August to the 23rd September 1897.
	Inoculated . 370	1·3	·8	6 in 13							
Kirki (followers of 4 batteries)	Uninoculated . 812	10·3	5·8	67·8 p.c.	7·9	4·3 to 1	4·6	79·5	4·8 to 1	1·3 to 1	The figures relate to the period from the 26th August to the 28th September 1897.
	Inoculated . 755	2·4	1·2	53 p.c.							
Hubli (16th July to 19th August)	Uninoculated 20,225	—	4·6	—	—	—	4·3	89·5	9·6 to 1	—	We think the figures for attacks untrustworthy. Dr. Ruffer thinks the figures for deaths also quite untrustworthy.
	Inoculated 22,967	—	·5	—							
Gadag (Mr. Foy's figures)	Uninoculated 8,687	2·7	2·3	83 p.c.	1·7	1·8 to 1	1·7	74·0	3·8 to 1	1·9 to 1	
	Inoculated 9,396	1·5	·6	44 p.c.							
Daman (62 houses)	Uninoculated . 123	—	—	38 in 55	—	2·2 to 1	—	—	4 to 1	1·7 to 1	
	Inoculated . 255	—	—	20 in 50							

69. For the administrator the measure of success attained by the use of inoculations is represented by the actual number of attacks and deaths averted from the inoculated. This number can be ascertained for any particular place by multiplying the figures shown in columns 6 and 8 of the table given above by the number of hundreds composing the inoculated population.

Form adopted by us in stating results in above table and criticism of form of statement adopted by Mr. Haffkine.

In addition to the figures which show the diminution of plague attacks and deaths among the inoculated population, we have set down in the table figures showing the diminution in mortality, as calculated out according to the method adopted by Mr. Haffkine. This method, though it affords information which is of value to those who desire to ascertain how far the effects of the vaccine have approximated to the ideal standard which would have been attained if all cases of plague had been averted from the inoculated, gives results which are likely to convey a wrong impression to the administrator. It will be seen that, whereas the diminution of mortality which was achieved by the introduction of inoculations among the troops at Bangalore, amounted actually to ·8 per cent., it figures, when calculated out according to Mr. Haffkine's method, as 53·3 per cent. Similarly, in Undhera, the diminution in mortality which was actually effected among the inoculated was 5·3 per cent. Mr. Haffkine's statement of the result is, that there was "a reduction of 89·6 per cent. of mortality attributable to inoculation." His method of calculation

correctly represents the percentage which the number of lives saved by inoculation bears to the maximum number of lives that might have been saved, and he takes, as the maximum number of lives that might have been saved, a number corresponding to the number of lives actually lost on account of plague among the uninoculated. The method, however, is likely to give rise to misunderstanding, especially when it is made, as it has been by Mr. Haffkine, the basis for such a general statement as the following:—" One can say in a general manner that the reduction in the mortality produced by inoculation is between 80 and 90 per cent." Such a statement, taken apart from the actual figures, might be taken to imply either that inoculation had averted death from 80 to 90 persons (*a*) in every 100 of the total population, or (*b*) in every 100 of the inoculated population, or (*c*) in every 100 inoculated persons attacked, whereas the statement really means that death was averted from 80 to 90 in every 100 of those who, without inoculation, would, judging by the mortality among the uninoculated, have died of plague. The misconception which might arise from the employment of this method of calculation will be most serious wherever the severity of the plague among the uninoculated is lightest; as, for instance, in the case of the light epidemic in the Byculla Jail. It will be seen that in that jail the diminution of mortality calculated by Mr. Haffkine's method would, on the figures given by us, amount to 100 per cent., whereas the actual saving in life achieved by inoculation would, on the same figures, be represented by the fact that death was averted from two of the inoculated persons.

With a view to avoiding such fallacies, we have expressed our results in a form that is not open to these objections. In column 10 of our table, we have set forth the ratio in which the deaths among the uninoculated stand to the deaths which actually occurred among equal numbers of the inoculated.

Synopsis of additional figures regarding effect of inoculation on case mortality.

70. A further point regarding the table we have given above relates to the character of the statistical material which it contains. It is to be noted that the table, while it includes all the more important figures regarding the diminution of deaths and attacks achieved by inoculation, does not include the whole of the figures worthy of consideration in connexion with the effect of inoculation on case mortality. Regarding this we have some additional data derived from observations made in hospitals, and in order to complete the synopsis of the statistical material from which our conclusions will be drawn, these additional data may be set forth as follows :—

SECOND SYNOPTICAL TABLE.

Hospital at	Once and twice inoculated patients grouped together.			Uninoculated patients.			Ratio of Fatality among Uninoculated to Fatality among equal Numbers of Inoculated Persons.
	Admitted.	Died.	Case Mortality.	Admitted.	Died.	Case Morality.	
			Per cent.			Per cent.	
Dharwar*	104	30	29·0	653	404	62	2·1 to 1
Gadag	107	56	52·2	184	130	70	2·3 to 1
Bangalore City	57	31	54·4	2,074	1,391	67	1·2 to 1
Bangalore Civil and Military Station, North Camp.	87	24	27·6	853	572	67	2·8 to 1
Bangalore Civil and Military Station, South Camp.	41	12	29·3	727	450	62	2·1 to 1
Bangalore Civil and Military Station, Military Hospitals.	121	80	66·0	69	59	78	1·2 to 1
Mysore City	26	9	34·0	180	92	51	1·5 to 1

* These figures are taken from a report on the Dharwar Plague Hospital from the 28th August to 18th December 1898, by Mr. Hornabrook, M.B., the Medical Officer in charge of the Hospital.

General statement of the protective effects of inoculation.

71. This and the foregoing table show that in every case, except that of Bulsar, inoculations had a considerable effect in warding off plague attacks from the inoculated, and that in every case without exception they rendered attacks among the inoculated less fatal than attacks among the uninoculated. The protection afforded by inoculation seems, however, never to be absolute, either in the matter of warding off attacks, or of warding off a fatal issue to an attack, and we have instances, in the statement of cases submitted to us with reference to patients treated in the Khoja Hospital at Bombay, which show that plague attacks may occur in persons inoculated as many as three or four times within 18 months of attack, and that such attacks may end in death. The facts thus established by actual experience in the case of man are precisely such as might have been anticipated from the experimental results obtained in the case of animals subjected to anti-plague inoculation.

Great differences in results set forth in the synoptical tables above.

72. When we consult the tables with a view to determining what measure of protection is actually afforded by inoculation, we see great differences in the results which are set down for various places. These differences are noticeable in the results set down with regard to the diminution both of attacks and of deaths among the inoculated as compared with the uninoculated population. They are noticeable also in the figures for case mortality, which represent the diminution of the death rate among the inoculated as compared with the uninoculated patients who were admitted to hospital, or whose attacks came otherwise under the observation of the authorities.

In the case of the Byculla Jail the ratio which the attacks in the uninoculated bore to the attacks in equal numbers of the inoculated, was 6·6 to 1. On the other hand, in the case of the troops at Bangalore, the corresponding ratio was 1·5 to 1. The corresponding ratios in other places vary between the extreme limits which are represented on the one hand by the ratio in the Byculla Jail, and, on the other hand, by the ratio among the troops at Bangalore.

The ratios of deaths among the uninoculated to deaths among similar numbers of inoculated persons vary between 10 to 1 in the case of Undhera, and 2·1 to 1 in the case of the troops at Bangalore.

The diminution of fatality in cases among the inoculated as compared with cases among the uninoculated was in the North Camp Hospital at the Civil and Military Station of Bangalore represented by the ratio of 2·8 to 1, the highest ratio observed; in the case of the Military Hospitals at Bangalore, the diminution of fatality was represented by the ratio of only 1·2 to 1, which is the lowest recorded.

Possible explanations of differences in results.

73. The variations in the results may conceivably be explained in one of four ways. They may be due to errors in the statistics sufficiently serious to falsify the ratios; secondly, they may be due to the assignment to the inoculated in certain of the statistics of attacks and deaths which were imputable to infection contracted shortly before or shortly after inoculation; thirdly, they may be due to differences in the virulence of the plague epidemics in the various places where inoculation was employed; and, fourthly, they may be due to differences in the strength and amount of the vaccine employed in different places.

Brief discussion of the accuracy of the figures in first synoptical table.

74. With regard to the suggestion that the discrepancies in the results may be conditioned by serious errors in the statistics, it is to be noted that this question, in so far as it applies to the first of the two synoptical tables now under consideration, has been already discussed in our detailed review of the statistical materials supplied to us. It will be sufficient to remark here that the statistics set forth in the first table are not all equally trustworthy. While, for instance, we may take all the figures given us for the Byculla and Umarkhadi Jails, and for the troops at Bangalore, to be as accurate as such figures can be, on the other hand we may notice that the figures given for Lanauli, Kirki, Hubli and Gadag, cannot be compared with those just mentioned in point of accuracy. We may further note that the comparisons based on the figures for Bulsar are, as we have already said, unduly to the advantage of inoculation; while, in view of this fact, it would be illegitimate to use these figures as an indication of the advantages

of inoculation, it will be legitimate to use them in gauging the liability of the inoculated to contract plague.

Discussion of accuracy of hospital figures for case mortality.

75. With reference to the figures for case mortality, however, we have not yet entered into a discussion of them, and we have, therefore, here to consider whether the differences of the effect of inoculation on case mortality, shown in different places, can be accounted for by differences in the conditions under which the various statistics were collected. We may begin by pointing out that patients who are really inoculated may, even in a hospital, occasionally be misclassified as uninoculated. This may readily occur in the absence of friends or relatives, or of a certificate of inoculation, in the case of patients who succumb without being able to render any account of themselves. We have no means of determining the amount of error which might thus be introduced into hospital statistics. But in view of the fact that in many cases patients were moribund when brought into hospital, the point must be kept in mind. To the extent to which it occurred the error must have operated to the advantage of inoculation in increasing the difference between the case mortality set down for the inoculated and that set down for the uninoculated. The trustworthiness of the hospital figures for case mortality may, however, be impugned on more serious grounds. They may be impugned on the ground that the severity of the cases in inoculated and uninoculated patients, respectively, which are treated in hospital cannot be taken as representing, with a fair degree of accuracy, the average severity of the total plague cases among these two classes of the community. Consideration will show that the mildest cases and the severest cases of plague will not be adequately represented in hospitals, inasmuch as the mildest cases of plague will be able to avoid being taken to the hospitals, and the severest cases will die before they can be brought in. It might be assumed *à priori* that this process of selection would influence the case mortality recorded for the inoculated and the uninoculated in opposite directions. In the case of the uninoculated it might be assumed that there would be excluded from observation in hospital a preponderating number of severe cases of plague, and only a very few mild cases of plague. In the case of the inoculated, on the other hand, inasmuch as the course of plague is favourably modified by inoculation, we might expect that there would be excluded from observation in hospital a large proportion of mild cases of plague, and only a comparatively small proportion of the severest cases of plague.

We find that the figures for Gadag harmonise with these inferences. We find that while the case mortality in the inoculated in the Plague Hospital at Gadag is set down as 52 per cent., the case mortality for the inoculated of the whole town is set down as 44 per cent., the reduction of case mortality in this instance being brought about by the inclusion, within the figures for the town as a whole, of 32 attacks, of which only four were fatal. If we may make the assumption that in Gadag all the deaths are correctly assigned to the classes of the inoculated and the uninoculated, respectively, and that all deaths from plague came to the knowledge of the authorities, it will be obvious that the figure of 44 per cent. cannot exceed the actual case mortality among the total inoculated population of Gadag. On the other hand, inasmuch as many mild cases must have escaped the notice of the authorities, we may assume that the actual case mortality may have been even below 44 per cent. In any case, it will be manifest that the case mortality of 52 per cent. obtained in the hospital in all probability gives us an exaggerated estimate of the case mortality in the total number of the inoculated attacked. Precisely the contrary of this seems to hold true with regard to the uninoculated in Gadag. The case mortality for the uninoculated in the Plague Hospital at Gadag works out at 70 per cent., while the case mortality which is set down for the total uninoculated population of the town is 83 per cent. This increase in case mortality is obtained by the inclusion, in the figures for the town as a whole, of a large number of cases which came to the notice of the authorities only after the patients had died. We do not know the precise number of these cases and deaths. There appears, in fact, to be a serious inaccuracy in Mr. Foy's figures, inasmuch as, when we subtract the figures which he has given us for cases and deaths in the hospital from the figures which he has given us for cases and deaths in the whole of the town, we arrive at the figure of 103 cases with 105 deaths.

We, however, cannot generalize from the case of Gadag. The figures obtained in other places do not tend always in the same direction. In the case of Dharwar, from the figures supplied to us from Mr. Hornabrook, we can institute a comparison betwen the case mortality of the inoculated in the hospital and the case mortality of the inoculated outside the hospital. Mr. Hornabrook's returns are divided into three parts. The first two parts bring the figures up to the 8th December 1898. The first part shows that, up to that date, out of 99 inoculated patients treated in the hospital, 27 died. The second part refers to inoculated persons attacked who were not brought into hospital. The result of the attacks is noted in 32 only of the cases included in this part. Of these 32 cases, 16 ended fatally. The third part of Mr. Hornabrook's returns brings the figures down to the 9th January 1899, but does not distribute them into cases that were treated in the hospital and cases that were not so treated. These figures show that in Dharwar the case mortality for the inoculated in the hospital was 27·4 per cent., while the case mortality for the 32 inoculated outside the hospital, expressed in percentages, amounted to 50 per cent. We may thus note that the case mortality for the inoculated who came under observation outside the hospital was greater than that of those who came under observation in hospital. The inference that in Dharwar plague was more severe in inoculated patients who did not come into hospital, in comparison with those who came into hospital, is borne out by a consideration of the details given in the third part of Mr. Hornabrook's returns. We find there 43 deaths set down as occurring in the cases of 69 persons who appear, as we infer from internal evidence, almost all to have been seen outside the hospital. This result is quite other than that which might have been expected, both on *à priori* grounds and from the consideration of the figures for Gadag.

The different results obtained in Gadag and Dharwar, respectively, show that the case mortality for the inoculated in hospitals stands in no constant relation to the case mortality among the total inoculated attacked who have come under observation. *À fortiori* it can stand in no constant relation to the real case mortality of the total body of the inoculated attacked.

The above considerations throw some light upon the figures for case mortality which are set down for the various hospitals in the City, and Civil and Military Station, at Bangalore. In the case of the North Camp Hospital, we have a case mortality of 27·6 per cent. for the inoculated, and in the South Camp Hospital a case mortality of 29·3 per cent. for the same class. The case mortalities just referred to have been taken on 128 cases, two-thirds of which were treated in the North Camp Hospital and one-third in the South Camp Hospital. In contrast to these, we have the figures of the hospital in Bangalore City, giving a case mortality of 54·4 per cent., taken on 57 cases among the inoculated and the figures for the Military Hospitals at Bangalore, giving a case mortality for the inoculated of 66 per cent., taken on 121 cases. It is to be noted that these very different results refer to one and the same plague epidemic. It is possible that an explanation of them so far as they relate to the case of the Military Hospitals, may be found in the assumption that, while all the inoculated attacked in the military community were brought into hospital, many of the more severe cases among the inoculated in the civil population were not brought into hospital. Similar considerations apply to the case mortality among the uninoculated in the various Bangalore hospitals. It will be seen that while this amounted to 78 per cent. in the Military Hospitals, where the figures are likely to be least erroneous, it was only 67, 67, and 62 for the City, North Camp, and South Camp Hospitals respectively.

In conformity with the above considerations, the case mortalities among the inoculated and uninoculated in the hospitals cannot, except in hospitals such as Military and Jail Hospitals, be taken as representing the actual case mortalities of the inoculated and uninoculated classes respectively. Inasmuch as the case mortality of one of these classes may be affected in a different degree and a different sense to that of the other, it follows that the ratio between the case mortality of the uninoculated and that of the inoculated patients treated in hospitals cannot be accepted as a correct index of the advantage which has really accrued from inoculation. In proof of this, we need point only to the ratios set down in our tables for the hospitals in Bangalore City and the Civil and Military Station. While these ratios ought to work out practically the

same, they vary in a most irregular way. In the Bangalore City and the Military Hospitals, where the conditions under which patients were brought into hospital were entirely different, they are 1·2 to 1. In the Civil Hospitals of the Civil and Military Station, to which patients were brought under conditions similar to those of the City Hospital, the ratios are 2·1 to 1 and 2·8 to 1. In these circumstances, though we have no doubt that the figures are sufficiently accurate to show that inoculation considerably reduces the case mortality of the inoculated, we shall be unable to make any use of the hospital figures in connexion with any exact calculations, except when such figures refer to Military or Jail Hospitals.

Possibility that less favourable results are in some cases due to inclusion among inoculated persons who contract plague before or immediately after inoculation.

76. We have now to consider the possibility that certain of the less favourable results shown in the tables which are now under discussion, may be due to the assignment to the inoculated of attacks and deaths due to infection contracted shortly before or shortly after inoculation. In certain of the statistics, that is to say those for Undhera and the Umarkhadi Jail, which record the most striking instances of the advantages of inoculation, the good results obtained may, in a certain degree, be attributable to the fact that there were either few or no attacks among the inoculated, which are referable to infection contracted shortly before or shortly after inoculation. In the case of the Umarkhadi Jail, plague was entirely in abeyance for a fortnight after the inoculation. In Undhera, though plague continued among the uninoculated at the rate of 10 cases in the first week after inoculation, there were among the inoculated two persons, at most, who can be regarded as having contracted plague at the time of inoculation. The experiment in the Byculla Jail is of particular interest in this connexion. If we compare the number of attacks that occurred among the uninoculated and the number among the inoculated from the date of inoculation, we find that there was a percentage of 6·9 and 3·9 cases, respectively, among these two classes, giving a ratio of 1·8 to 1. But if, allowing 5 days for the incubation period, we exclude all cases that might have been incubating plague at the time of inoculation, we arrive at the results which have been tabulated above, and which give a ratio of 6·6 to 1. The inclusion of cases among the inoculated who were incubating plague at the time of inoculation, must influence every comparison based on average strength; it will be remembered that this method of comparison is resorted to only when inoculations are continued during the period of observation. This fact must be borne in mind in connexion with the less favourable results obtained in Kirki, among the troops at Bangalore, and possibly in the case of Bulsar. Regarding the dates of inoculation at this last place, however, we have no exact information.

Criticism of Mr. Haffkine's suggestion that protection is conferred within 24 hours.

77. The assumption that the relatively less favourable results were due to the inclusion among the inoculated of persons who were incubating plague at the time of inoculation could not be made, if there were any reason to accept Mr. Haffkine's suggestion, that, "though the prophylactic was powerless to arrest symptoms already started, or which developed a few hours after inoculation," "there is a possibility of its influencing the disease in the incubation period in an individual infected three or four days previously," and that "the time necessary for the plague prophylactic to produce a useful effect is . . . apparently less than 24 hours." The results obtained by the Pasteur system of inoculation against rabies clearly show that an inoculation may afford protection against the effects of infection already contracted. Indeed, there is no reason for inferring that the period required for the achievement of protection must always exceed the incubation period of the disease protected against. Thus, theoretically, Mr. Haffkine's vaccine might quite well protect against infection already contracted. On the other hand, in view of the short incubation period of plague, and in view of the fact that our experience in the case of other diseases, both in animals and men, indicates that protection is not at all rapidly established, it seems to us unlikely that the anti-plague inoculation can exert any favourable influence on persons who are already incubating plague. The matter, however, is one which can be definitely determined only by scrutinising the records of actual observation to ascertain how soon protection becomes established. We have, therefore,

endeavoured to gather indications regarding this matter from the evidence laid before us.

Possibility of determining by consideration of dates of attack how soon protection is acquired.

78. It would seem possible to test how soon protection is achieved by determining what percentages of the total attacks among the inoculated are attributable to each successive day or week after inoculation. We may consider first what details are necessary to apply this test. If we are dealing with a group of persons all inoculated on the same day, we should require to know the number of inoculated persons composing the group, the period for which they were kept under observation, and the number of cases that occurred among them in each day or week of the period of observation. It would, moreover, be necessary to know to what extent plague continued among the uninoculated during each day or week throughout the period of observation, in order to determine whether the inoculated in the concluding days or weeks of that period were or were not exposed to less infection than those in the earlier days or weeks. We could then calculate out the daily or weekly percentage of attacks, for the first day or week on the original number of inoculates, and afterwards on the number of these remaining over unattacked on each day or week. A comparison of the percentage of the attacks which occurred shortly after inoculation with the percentages which occurred later would give the required information as to the date on which protection was achieved. When the results of a series of inoculations done on successive days in one community are in question, the same particulars regarding each successive group of inoculates will be required. This is not the method that has been adopted in the preparation of the statistics placed before us. The method adopted has been to bring the period of observation for a number of successive groups of inoculates to a conclusion on one and the same day, to sort out the cases that have occurred before that day into groups according to the length of time after inoculation at which they occurred, and then to compare the numbers of attacks in different days or weeks with a view to drawing conclusions with regard to the protection achieved at varying periods after inoculation. This method leads to erroneous results. How erroneous these results may be will be manifest when we consider what would be the effect of applying the method to an extreme case. In such an extreme case as that of a community composed of two groups of inoculates, inoculated on two days separated by a considerable interval of time, if the period of observation was brought to a close within, let us say, a week after the second series of inoculations, it is plain that the ratios which the percentage of attacks occurring in the first week after inoculation would bear to the percentage of attacks occurring in weeks remoter from the dates of inoculation would be vitiated by the fact that the figures for the first week would include the cases that occurred in both groups of inoculates, while the figures for the subsequent weeks would exclude the attacks that might have occurred among the second group of inoculates after the date on which the period of observation was brought to a close.

Possibility of determining by consideration of case mortality how soon protection is acquired.

79. We have gone through the figures supplied to us and find that they are presented to us in such a form as to make it impossible to arrive at any conclusion as to whether the percentage of attacks among inoculated persons has been greater or less in the first few days after inoculation than in the subsequent period. In default of the data necessary for the decision of this question we have fallen back upon the only other line of inquiry which seems open to us. In other words, we take the case mortality as our index of the protection acquired by the inoculated. We have gone through various statements laid before us, with a view to determining whether there are any differences between the case mortality in inoculated persons attacked during the first few days after inoculation and the case mortality in inoculated persons attacked at a later period. The most satisfactory and most detailed statement which we have to assist us in this matter is that furnished by Mr. Hornabrook. He has given us a statement of the cases of 208 inoculated persons. Of these we can here make use of 142 cases only, as the rest are those of twice-inoculated persons or of once-inoculated persons regarding whom full details are not given. Our examination of the 142 cases has given us the following results, which show the case mortality among the inoculated attacked on the day of inoculation, among those attacked

on each of the five succeeding days, and among those attacked in the period after the expiration of five days.

Number of Cases among Once-inoculated Persons.

On Day of Inoculation.		On 1st Day after Inoculation.		On 2nd Day after Inoculation.		On 3rd Day after Inoculation.		On 4th Day after Inoculation.		On 5th Day after Inoculation.		After 5 Days after Inoculation.	
Cases.	Fatal Cases	Cases	Fatal Cases.	Cases.	Fatal Cases.	Cases.	Fatal Cases.	Cases	Fatal Cases.	Cases.	Fatal Cases.	Cases.	Fatal Cases.
11	7	9	4	8	3	7	5	8	0	6	0	93	30

This summary of observations shows that the case mortality is very much higher in patients attacked during the first few days after inoculation than it is at a later period. In view of the fact that Mr. Hornabrook's list is the most extensive series of observations which we have, and that it shows that the case mortality is severest in the first three days after inoculation, we assumed that figures of other observers would, if scrutinised, likewise show that protection was definitely established only after the expiration of a similar interval. With a view to determine this, we have, wherever the data were available, worked out the case mortality in once-inoculated persons attacked within the first three days after inoculation. Similarly, with a view to instituting a comparison, we have worked out from the statistics in question the case mortality in persons attacked more than three days after inoculation. The result of the analysis of the figures is as follows:—

Place.	Cases in Once-inoculated Persons attacked on Day of Inoculation and the subsequent Three Days.			Cases of Inoculated Persons attacked more than Three Days after Day of Inoculation.		
	Cases.	Fatal Cases.	Case Mortality.	Cases.	Fatal Cases.	Case Mortality.
			Per cent.			Per cent.
Dharwar (Mr. Hornabrook's figures).	35	19	54	107	30	28
Karachi (from Mr. Kaka's investigation sheets).	6	6	100	41	19	46·5
Daman (from Major Lyons' investigation sheets),	7	5	71·5	84	31	37
Baroda (Major Sarkies' figures).	4	1	25	9	3	33 3
Belgaum (Mr. Uchgaonkar's figures).	3	3	100	58	30	52
TOTAL	55	34	62	299	113	43·3

It is thus manifest that, while the case mortality of the first three days compares favourably with that of uninoculated patients, the protection which is achieved within the first three days after inoculation compares very unfavourably with that which is achieved later on. It is probable that this inference would be confirmed by the examination of other figures, if we had been able in other cases to distribute the plague attacks into those that occurred in the first three days after inoculation and those that occurred afterwards. We see an indication of this in the fact that when we institute, as we are able to do in certain instances, a comparison between the case mortality in persons attacked within seven days of inoculation and the case mortality in persons attacked

later, the case mortality for the former is less favourable than that for the latter. The figures to which we refer are as follows:—

Place.	Cases of Persons attacked on Day of Inoculation, or within Seven Days after.			Cases of Persons attacked more than Seven Days from Date of Inoculation.		
	Cases.	Deaths.	Percentage.	Cases.	Deaths.	Percentage.

Possibility that variations in results of inoculation are due to variations in virulence of plague.

80. Another explanation of the discrepancies in the synoptical tables which suggests itself is that the protective effect of inoculation may be inversely to the virulence of the epidemic. Countenance would appear to be given to this explanation by the results shown for the Byculla Jail; here we have very good results, both as to the warding off of attacks and as to the reduction of fatality, in the case of an epidemic where the case mortality taken on the 26 uninoculated attacked during the whole course of the epidemic was only 50 per cent. The explanation would also appear to be countenanced by the results of the inoculations done among the troops at Bangalore. Among them, in an epidemic whose virulence may be gauged from the fact that deaths occurred at the rate of 85 per cent. among the 69 uninoculated attacked, we have much less favourable results for inoculation, both in reduction of attacks and in reduction of fatality. This explanation, however, is discountenanced by the fact that the results obtained in Undhera were many times better than the results obtained among the troops at Bangalore, though, since the virulence of the epidemic was slightly greater, worse results might have been expected. Moreover, the explanation would appear to be in conflict with the fact that, with regard to both attacks and deaths, the results obtained at Undhera, where the case mortality during the whole course of epidemic was 91 per cent. among the uninoculated, are much better than the results obtained in Bulsar, where, judging from the figures for the uninoculated Ghanchi Ward, we may take the case mortality among the uninoculated to have been 69·5 per cent. (16 deaths in 23 cases). The smaller effect produced in Bulsar is the more remarkable inasmuch as we have seen above that the comparison that has been instituted there between inoculated and uninoculated is unduly to the advantage of inoculation. We must therefore conclude that the explanation of the greater or less effectiveness of inoculation is not to be found in the variation in the virulence of the plague in different places.

Possibility that variations in results of inoculation are due to variations in strength or character of the anti-plague vaccine.

81. We may now seek for an explanation of the varying effectiveness of inoculation by inquiring whether the result of inoculation is governed by differences in the vaccinating material injected. In respect of this question we may note that Mr. Haffkine himself has suggested that the effectiveness of the vaccine is conditioned by differences in strength. In confirmation of this suggestion he has drawn attention to the results obtained from the inoculations in Kirki and Daman.

First, in connexion with the results in Kirki, which Mr. Haffkine imputed to the defective strength of the vaccine, we may note that the first of our synoptical tables shows that in Kirki the protection against attacks was inferior only to the protection against attacks obtained in Lanauli. We may exclude from consideration here the figures for the Byculla Jail, where the epidemic was light. Similarly, the ratio of diminution in deaths among the inoculated as compared with the uninoculated at Kirki was, if we leave out of account the epidemics of the Byculla and Umarkhadi Jails, where there were no deaths, inferior only to the figure obtained at Lanauli and Undhera, and

to that set down for Hubli. Hence, although the vaccine used at Kirki is said to have been below the average strength in its power of producing temperature reaction in the inoculated, yet, assuming always the accuracy of the data, it must be considered as being well above the average from the point of view of its efficacy.

In connexion with the relative efficacy of weak and strong vaccines and of larger and smaller doses, Mr. Haffkine has referred, in the case of Daman, first to the better results which are stated to have been obtained in the town by the inoculations performed in March with vaccine which produced a higher fever reaction, as compared with the vaccinations performed in April with vaccine which produced a lower temperature reaction; and further Mr. Haffkine has referred to the better results stated to have been obtained by Dr. Kalapesi with large doses as compared with the results obtained by Dr. Poiares with small doses. The results as stated by Mr. Haffkine are as follows:—

	No. of Persons inoculated.	Attacks.		Deaths.		Case Mortality per cent.
		No.	Per cent.	No.	Per cent.	
In March, with strong vaccine .	1,017	49	4·8	15	1·5	30·6
After March, with weaker vaccine	628	41	6·5	20	3·2	48·8
By Dr. Kalapesi, with full doses	1,924	70	3·6	22	1·1	31·4
By Dr. Poiares, with reduced doses	270	21	7·8	4	5·2	66·7

NOTE.—Mr. Haffkine's figures include persons inoculated more than once.

"Thus," says Mr. Haffkine, "amongst the inoculated with reduced doses the total mortality was 4·5 times and the case mortality 2·1 times higher than that amongst the inoculated with larger doses." Inasmuch as we have already pointed out that figures for the town as a whole must be received with great reserve, we have endeavoured to check the results set forth by Mr. Haffkine by reference to the investigation sheets prepared by Major Lyons, I.M.S. From these we have taken out all those once-inoculated persons who were inoculated in March, and all those who were inoculated after March. The name of the medical man who performed the inoculations has not been stated in the details supplied in the investigation sheets, but we presume that the inoculations detailed in the third series of investigation sheets, and spoken of as having been done with reduced doses, are inoculations done by Dr. Poiares, and that the inoculations included in the three other series of investigation sheets were done with full doses. The results of our analysis of the investigation sheets is as follows:—

	No. of Persons once inoculated.	Attacks.		Deaths.		Case Mortality.
		No.	Per cent.	No.	Per cent.	Per cent.
In March, with strong vaccine .	87	23	26·6	4	4·6	17·4
After March, with weaker vaccine	167	57	34·0	30	18·0	31·6
With full doses	199	60	30	21	10·6	35
With reduced doses	55	20	36·5	13	22·3	65

The results agree in all important points with those obtained by Mr. Haffkine for the town as a whole. They indicate, as Mr. Haffkine himself has recognised, that it is essential to the attainment of the best results that the vaccine should be carefully standardized.

Effect of double as compared with single inoculations.

82. Closely connected with the question as to what dose of vaccine will give the best results, is the question as to what is the comparative efficacy of double and single inoculations. We are able to gather only uncertain indications from the results set down in the first of our synoptical tables. We find that the best results were obtained in Undhera, where only single inoculations were employed. On the

other hand, the least favourable results included in the table are those which were obtained among the troops at Bangalore, who were, for the most part, inoculated twice. In short, the figures of the table tend, on the whole, to show that a single inoculation is more effective than a double inoculation. To test this we have collected such additional information as we have been able to extract from the evidence recorded in our Proceedings. That information is summarised in the following table :—

Place.	Number of People under Observation.		Percentage of Attacks among		Percentage of Deaths among		Percentage of Case Mortality among		Ratio of Attacks among the Once Inoculated to Attacks among an equal Number of Twice Inoculated.	Ratio of deaths among the Once Inoculated to Deaths among an equal number of Twice Inoculated.	Ratio of Fatality in Attacks among the Once Inoculated to the Fatality in an equal number of Attacks among the Twice Inoculated.
	Once Inoculated.	Twice Inoculated.	Once Inoculated.	Twice Inoculated.	Once Inoculated.	Twice Inoculated.	Once Inoculated.	Twice Inoculated.			
Daman (investigation sheets).	254	128	31·5	8·6	13·4	1·5	42·5	18·2	2·3 to 1	3·6 to 1	9 to 1
Gadag (Mr. Foy's figures) .	2,528	6,868	1·3	1·5	·5	·7	42·5	44·2	·9 to 1	·9 to 1	·7 to 1
Dharwar (Miss Corthorn's figures).	3,270	3,463	1·7	·6	·6	·2	33·3	28·6	1·2 to 1	2·8 to 1	3 to 1
Hubli (Mr. Cappel's figures for 5 weeks).	9,514	13,453	—	—	·5	·5	—	—	—	—	1 to 1
			Patients admitted.		Number of Deaths.						
Khoja Plague Hospital (Mr Khaja Abdulla's figures)	—	—	35	27	17	7	48·7	26·0	—	—	1·8 to 1
Gadag Plague Hospital (Mr. Foy's figures).	—	—	32	75	15	41	47·0	59·7	—	—	·8 to 1
Dharwar Plague Hospital (Mr. Hornabrook's figures).	—	—	157	50	53	26	34·0	52·0	—	—	·6 to 1

A scrutiny of this table will show that the results are most divergent. It will be seen that in Daman a second inoculation conferred considerable additional protection. The same appears to hold true, though to a less extent, of patients treated in the Khoja Hospital at Bombay. From Miss Corthorn's figures for the town it appears that a small amount of additional protection accrued to the doubly inoculated at Dharwar, but Mr. Hornabrook's figures, regarding 157 of the cases observed by him, indicate that the fatality among the twice-inoculated was one-third greater than the fatality among the once-inoculated. Mr. Foy's figures for the town and for the hospital of Gadag similarly show that the twice-inoculated as compared with the once-inoculated were less effectively protected. Lastly, in Hubli the figures regarding deaths set down for the town indicate that there was no difference between the once and the twice inoculated.

If we are to seek an explanation for these divergent results, it is manifest that we can seek it only in the varying strength of the vaccine. We have already pointed out, in the earlier portion of this chapter, not only that plague cultures of very varying virulence were employed for the preparation of the vaccine, but also that the prescribed dose of the vaccine contained, in some cases, seven times more of the effective bacterial sediment than it did in other cases. We think that differences in the strength of the vaccine may, in addition to explaining the differences set forth in the table we have last given, also account for many of the differences set forth in the synoptical tables. There would, so far as we can see, appear to be a particular dose of vaccinating material which gives the best results, and it would appear to us to be important to secure by the adoption of an accurate method of standardization that this quantum should be contained in the prescribed dose, and that, if possible, this quantum should be administered in a single inoculation, so as to avoid the necessity for re-inoculation.

83. We have now reached a point at which it is appropriate to discuss the duration of the protection afforded by inoculation. There are no data to enable us to arrive at a conclusion on this matter, unless we regard as such Major Bannerman's figures for Undhera, which seem to show that the protection had not decreased in the course of six weeks, the figures for the Umarkhadi Jail which show that the inoculated suffered more than the uninoculated in a period dating from the fourth week after inoculation, and lastly (if these can be considered sufficiently accurate to

Duration of protection conferred by inoculation.

furnish a general indication) the figures for Hubli, Dharwar, Gadag, Bangalore and Mysore. The figures for the five places last mentioned show that the inoculated as a body, though numbers of them were exposed to plague for a considerable time after inoculation, suffered less than the uninoculated, and they may thus be taken as indicating that the effect of inoculation is to some extent lasting.

From the above it will be seen that the statistics placed before us afford us little material for a decision as to the duration of the protection conferred by inoculation, but this question could be easily determined by following up the history of a group of persons all inoculated at the same time, and by noting the number of cases and deaths from plague among them in a succession of months following upon their inoculation. In interpreting the information thus collected it would be necessary to take into consideration the variation in the amount of plague among the uninoculated population during the months included in the period of observation. While the consideration of the attacks and deaths alone would give us an indication with regard to the duration of protection, more accurate conclusions would probably be drawn if the case mortality was taken into consideration. Just as in the fact that the case mortality among the inoculated in the first days after inoculation is greater than in the succeeding period we have an indication that protection conferred by inoculation is not fully achieved during the first few days, so it is probable that we should find in an increase of case mortality an indication of the time when the protection was beginning to wear off. If two or more groups who had been inoculated with different and accurately known quantities of vaccinating material were kept under observation, valuable indications could probably be drawn from the results as to the quantity of vaccine which produced the most lasting protection.

Question whether anti-plague inoculation exerts influence on other diseases.

84. Only one question now remains to be dealt with in connexion with the influence on the organism exerted by Mr. Haffkine's anti-plague prophylactic fluid. This question relates to the suggestion, to which we have already referred, that anti-plague inoculation protects not only against plague but also against other diseases. This suggestion emanated from Mr. Haffkine. It appears that in the course of his inoculation work a certain number of cases were brought to Mr. Haffkine's notice in which fevers of an undetermined nature were favourably influenced by the injection of his vaccine. An idea that anti-plague inoculation might possibly protect against other diseases having thus suggested itself to him, Mr. Haffkine proceeded to seek in this idea an explanation for the extraordinary absence of mortality from general causes which was noted in the case of the Khojas inoculated in Bombay. We have, however, pointed out that the exceptionally light mortality recorded for the inoculated Khojas is capable of being explained in quite a different way. What we have just said applies not only to the case of the Bombay Khojas but also to the case of the inoculated Karachi Khojas, among whom there was a similar extraordinary absence of deaths from general causes, which was similarly attributed to the effects of inoculation. The instances which have been just referred to constitute the only statistical evidence which has been brought forward in support of Mr. Haffkine's claim that his vaccine favourably influences diseases other than plague. As this statistical evidence is untrustworthy, we have to fall back on *à priori* considerations, the two isolated instances which Mr. Haffkine has adduced of cases of fever favourably influenced by inoculation, and a few other isolated instances adduced by other witnesses. According to the more or less indefinite statements of the two or three witnesses who are in question, the plague prophylactic is capable of favourably modifying every possible class of disease, from ringworm to leprosy. It is obvious that statements of this kind are not deserving of serious attention. That vaccination against one disease may influence the course of another is, however, *à priori* quite credible, inasmuch as it is known that one disease may influence the course of another. But since no trustworthy evidence has been adduced before us to show that this obtains in the case of anti-plague inoculation, the suggestion, though one that might be kept in view by future observers, need here no longer engage our attention.

Summary of conclusions regarding protective effect of inoculation.

85. As a preliminary to discussing the application of inoculation as a measure for combating plague, it will be convenient to summarise here the results of the preceding critical

study of the nature and effect of the anti-plague vaccine. These results may be summarised briefly as follows:—

I. Inoculation sensibly diminishes the incidence of plague attacks on the inoculated population, but the protection which is afforded against attacks is not absolute. On the one hand, plague has attacked persons who have undergone inoculation as many as four times in the course of two years previous to their attack. On the other hand, as many as 8 per cent. of the inoculated population may suffer from plague, as was the case in Bulsar. Many varying influences have been at work in determining the rate of attack in different places, and it is impossible to give a numerical expression for the measure of protection against attack which inoculation confers.

II. Inoculation diminishes the death-rate among the inoculated population. This is due not only to the fact that the rate of attack is diminished, but also to the fact that the fatality of attacks is diminished. Here, again, no numerical expression for the amount by which the death-rate is diminished can be given.

III. Inoculation does not appear to confer any great degree of protection within the first few days after the inoculation has been performed. This fact, we may note in passing, has an important bearing on the risk of infection which would be incurred by recently inoculated persons if they were left behind in surroundings so plague-infected as to render their evacuation by the uninoculated desirable.

IV. Inoculation confers a protection which certainly lasts for some considerable number of weeks. It is possible that the protection lasts for a number of months. The maximum duration of protection can only be determined by further observation.

V. The varying strength of the vaccine employed has apparently had a great effect upon the results which have been obtained from inoculation. There appears to be a definite quantum of vaccinating material which gives the maximum amount of protection; and provided that this quantum can be injected in one dose, and provided also that the protection turns out to be a lasting one, re-inoculation might with advantage be dispensed with. The best results of inoculation will only be obtained after an accurate method of standardization has been devised.

Reason for dislike and opposition of the people towards inoculation.

86. The utility of inoculation as a practical measure depends, above all things, upon the extent to which the people are willing to submit to the operation. In a country like India compulsion in such a matter is not to be recommended. The attitude of the people towards inoculation is therefore deserving of very careful consideration. The attitude of the people towards inoculation has generally been the reverse of encouraging. Though, at times, some of the better classes may have been ready to submit to it, the feeling amongst the masses, at any rate until the good results of inoculation caused influential persons to be inoculated, has generally been one of dislike and opposition. This dislike and opposition, so far as we are able to gauge the reasons for it, was based upon the following objections:—First, there was an unwillingness on the part of the people to undergo the personal inconvenience and fever caused by inoculation, in view of the doubts which they entertained regarding the reality and duration of the protection said to be conferred. Secondly, there was as we have been told by Colonel Weir, I.M.S., the fear of communication of disease by the syringe from one person to another. Thirdly, in one case at least, at Guntakal, the people were afraid to be inoculated, because a case of sudden death after inoculation occurred in a man previously to all appearances perfectly healthy. Fourthly, we have an instance in Bulsar of a community which refused to avail itself of inoculation because they saw that plague cases continued to occur in a large number (8 per cent.) of a group of inoculated persons which was directly under their observation. Lastly, we have reason to believe that, particularly in Bangalore and Bombay, the progress of inoculations was checked by a statement made in evidence before us to the effect that the prophylactic fluid was very seriously contaminated with putrefactive, and in some instances pathogenic, organisms.

Degree to which inoculation resorted to in places threatened, but not actually infected.

87. This being the feeling of the populace towards inoculation, they have seldom come forward to undergo it, except where they were in imminent fear of something that they disliked still more, and which they hoped by means of it to escape. It has usually been not so much the disease itself as the removal to hospital, segregation, restrictions on travelling, evacuation and other measures resorted to to check disease, that have induced them to resort to inoculation. Thus, where there was no immediate prospect of measures, there was hardly any inoculation.

88. The Director-General of the Indian Medical Service, when asked whether he thought the people will ever consent to be inoculated on a large scale before there is an outbreak of plague among them, replied that he did not; "You have only to look at the way in which they neglected vaccination. They admit the effectiveness of vaccination, but they will be apt to neglect it." The Sanitary Commissioner of the Madras Presidency was of the same opinion. "The practical difficulty," he said, "seems to me to be to get an operation of that sort accepted, especially by certain classes of the people and the uneducated generally, in time to secure a prevention of the spread of the disease, that is to say, I do not think it is possible, it is not within the practical sphere of sanitation, to say that any area can be so prepared beforehand (by means of inoculation) as to prevent an invasion of plague." Practical experience in various uninfected places not exposed to any immediate danger seems to prove the correctness of these views. Madras City is a case in point. It has hitherto escaped from indigenous plague altogether, and towards the close of 1898 there was no infection even near it. Major Bannerman, I.M S., gave a number of lectures there on the subject. He was assisted by three medical officers specially deputed for the purpose; four district surgeons, and a lady doctor also aided him in attempting to popularise inoculation. The net result was that in 2½ months about 5,000 people were inoculated out of a population of 450,000.

Madras City was not in any immediate danger of infection. In a place which, though still free, is practically certain to be infected at a very early date, the motives for being inoculated may be expected to be stronger. Such a case is that of Mysore City. The motive for all the people getting themselves immunized beforehand was probably as strong in Mysore City as it is ever likely to be in any place, since it was almost certain that the infection would come there from Bangalore. Yet, when the disease did come into Mysore City, it found about six-sevenths of the people still uninoculated. The one advantage to be gained by inoculation in Mysore City was that inoculated persons could travel more readily than the uninoculated. There was no special exemption that the Government could offer to the people, for there were practically no plague measures. Therefore, putting aside a certain number who were inoculated probably because they wanted to leave the town, the majority became inoculated presumably because they believed that they were being protected. The circumstances of Mysore City, however,—situated as it is in a Native State,—are special, and we have no exact information as to the motives which there induced people to come forward for inoculation before the outbreak was severe, and to cease to submit themselves to inoculation at about the time when plague was at its height.

10,723-8.

Except Mysore City, the only place of which we have information that any large proportion of the people were willing to get themselves inoculated before plague broke out among them is Palewal, a small village in the Punjab. It would have been possible, Captain Clarke, I.M.S., told us, to inoculate all the inhabitants of this village. "There was a Banniah who took the thing up, and he was anxious to remain in and not to be turned out, because it was the beginning of the rains. . . . . The people had seen plague all round them, and they themselves stood alone. It was the last village—a little island surrounded by plague villages—and they had seen the discomforts that the others were subjected to . . . . and they were anxious to get relief from those measures. They thought that if they were inoculated they might be allowed to stop in." Here

it is obvious that the chief motive for resorting to inoculation was the desire to avoid the ordinary plague measures, and further it is probable that even that motive would not have had much effect had it not been for the influence brought to bear on the people by a prominent inhabitant of the village who was particularly interested in avoiding evacuation.

In other threatened villages in the neighbourhood of towns where inoculations had been carried out on a large scale, the motives that induced the inhabitants to have themselves inoculated may have included, in addition to the motives referred to above, a conviction that inoculation really did protect against plague. The villagers in the neighbourhood of Hubli and Dharwar were, Mr. Cappel told us, very anxious to be inoculated. The inoculation measures in these two towns had been on such a large scale, and had gone on with advantage to the inoculated for so long, that the people round had been thoroughly convinced of the protection conferred by inoculation. "From one village a long way south of Hubli, I," says Mr. Cappel, "had an offer from a native banker to produce 500 people for inoculation and pay all the expenses of the English Commissioned inoculating officer and his staff. I had another application from the basket weavers of a village 22 miles south of Hubli, who offered to come in in a body to Hubli if we promised not to segregate them, or put them in health camps—a promise which I gave them. There is another village called Annigerry which has frequently applied to me by telegraph and otherwise for the assistance of inoculators, and, that village being a large one, we have treated it as a town, and given it the benefit of inoculation."

Only a few instances like the above have been brought to our notice. On the other hand, we may notice that village opinion is not always influenced by the success of inoculation in neighbouring places. We have a striking illustration of this in the case of the villages of the Baroda State. Here, in spite of the fact that the inoculation experiment carried out at Undhera proved so successful, we find that only a very small number of the inhabitants of actually infected villages accepted the offer of inoculation which was made to them. The number who did so in villages threatened but not infected was so small as to be insignificant.

Even after plague has attacked a place, inoculation has not made much way with the people, unless in cases where severe plague measures were enforced in the case of the uninoculated and were relaxed in the case of the inoculated. The indifference or opposition of the people towards inoculation is illustrated by the attitude of the people in the two largest cities in India. In Calcutta, in the first epidemic, "they made things very unpleasant for persons who were supposed to be inoculators." Dr. Kailas Chandra Bose told us he tried to induce people to be inoculated, but without success. He said, "they are deadly against it, I do not know why. I do not think they would submit to that process at all." The amount of inoculation done was altogether insignificant. Operations were begun the very day that the existence of plague was notified, *viz.*, 30th April 1898. But up to the 22nd July 1898, the total number of inoculations performed was only 2,400, a number that did not go any appreciable way towards protecting the population. It is true that there were only two inoculators at work, but if there had been more it would not, in the opinion of Dr. Nield Cook, the Health Officer, have made any appreciable difference. The leaders of the Muhammadan community did indeed come forward, and a few of the better class people of all communities. But inoculation "did not get really taken up: the plague did not get quite bad enough." The bulk of those who offered themselves for inoculation were "persons who desired to travel by rail without suffering the inconvenience of detention at inspection camps." And during the remainder of the year, owing to the small amount of plague, the absence of scare, and the removal of the office to another place, the number seeking inoculation rapidly became smaller still; only 31 persons presenting themselves in a space of five months.

In Bombay City, the number inoculated in 1898 was very small relatively to the total population. The Municipal Commissioner endeavoured to get the influential leaders among the Hindus to co-operate. Small payments were allowed to poor people who were prevented by the reaction from going to their

ordinary work; and encouragement to perform inoculations was given to the Medical Officers of the Municipality and to certain private practitioners. But from the beginning of the year up to 20th November only 25,358 people were inoculated. Lieutenant-Colonel Weir, I.M.S., told us in December that the opposition was certainly much less than it had been; and he anticipated that during the next outbreak a very much larger number of people might come forward. From returns lately sent to us, however, we find that, although the people of Bombay have had experience of three outbreaks, the number inoculated up to 13th September 1899 was only 38,454 out of a population of over 800 000. Moreover, of these a considerable percentage consisted of persons inoculated in the Khoja community, which resorted to inoculation principally on account of the influence of their Chief, His Highness the Aga Khan.

The case of Karachi is precisely similar to that of Bombay. A very small proportion of the general population of Karachi submitted themselves to inoculation, while a very large proportion of the Khojas got themselves inoculated. In Baroda it would appear that while the general population did not avail themselves to any extent of inoculation, the influence of the Parsee Panchayat was able to induce most of the Parsee community of the place to become inoculated. In the Punjab, where inoculations were resorted to, they seem, as in particular at Banga, to have been resorted to chiefly on account of the advice and example of influential people who interested themselves in the matter.

In Satara, Belgaum, Surat, and the Central Provinces, where few inoculations were done, the attitude of the people towards inoculation may be gathered from the following extracts, to some of which we have already referred, of the evidence given before us by responsible plague officers.

At Satara, "the people," says Captain Thompson, I.M.S., "only resorted to it when we brought statistics before them to prove its great value." But it also appears that it was only "more or less" voluntarily that the few came forward who did come forward. "Some compulsion was used, that is to say, they had privileges held out to them if they submitted to inoculation. If they were living in infected places they were told that unless they became inoculated they would be moved out into segregation and health camps." "I have tried every means in my power," said Colonel Hay, also referring to the town of Satara, "to persuade them, even to the extent of promising re-admission to their houses; they have been promised that those who have been evacuated should be allowed to return if they would be inoculated, but it has had no effect on them at all."

The object of the few people who got themselves inoculated at Karad, in the Satara district, seems to have been mainly to get permission to go out into the infected villages for trading purposes.

At Belgaum the people who came up for inoculation came "on the assurance given to them that no inoculated person would be liable to be removed to hospital or segregation camp against his wish." The withdrawal of that assurance resulted, Mr. Uchgaonkar says, "in almost a complete check to the further progress of inoculation."

Most of the people inoculated at Surat were, Lieut.-Colonel Nariman, I.M.S., said, "Refugees from Bombay, and they wanted to get back to Bombay."

Colonel Hutcheson, I.M.S., again, told us that at Hinganghat, in the Central Provinces, the people applied for the inoculations to be done simply in order to obtain a pass which would permit them to go to their various employments.

In the North-West Provinces, Mr. Winter said, "At Jawalapur arrangements were made for inoculation, but we were to use no pressure on the people, and they would not hear of it."

89. We may now pass on from the consideration of infected places where inoculations were either not done or were done only in very small numbers, to the consideration of infected places where a considerable portion of the population was inoculated. We have already considered the case of Mysore City, which

Conditions in places where inoculations largely resorted to.

stands by itself, and we have now to consider only the cases of Hubli, Dharwar, and Gadag, all three within the Dharwar district, and of the City and Civil and Military Station of Bangalore. We have referred above to the question of the general motives which induced people to become inoculated, and we have also in our critical study of the statistics, in the cases of the particular towns now in question, dealt with the motives which were specially operative in them, and the manner in which inoculations were pushed. It may, however, be advisable here further to quote the opinion of some of the officers on the spot.

"The object of the people," says the Collector of Dharwar, speaking of all the towns in his district, but more especially of Hubli, "is, in a very large proportion of cases, and the object of almost all the people at the beginning of the operations before they become convinced by bitter experience of the advantages of the process, is not to obtain an inoculation, but to obtain the certificate, which carries with it certain immunities and privileges."

The motives which influenced the people of Dharwar to get inoculated may be judged also from the following statements. On the one hand, Major Hardy, the Chief Plague Officer of the town stated the people "feared segregation and inoculation. . . . . 18,000 went out in one week influenced by this fear." On the other hand, Surgeon-General Harvey, the Director-General of the Indian Medical Service, in addressing the Royal Society, and, we understand, referring to the case of Dharwar, said "that while the mention of inoculation drove 30,000 people from the City of Calcutta, he had himself seen, in another part of the country, people coming in their hundreds to be inoculated, and paying 2 annas each for the privilege." That payment was made for inoculation does not prove that the people appreciated the value of inoculation as a protection against plague, any more than the fact that, in the neighbouring town of Hubli (and we think that this was the case at Dharwar also) payments were made by the people for the disinfection of their houses proves that they had a belief in the efficacy of disinfection. In both places inoculation and disinfection were necessary preliminaries to the return of the people to their houses.

Speaking of Gadag, Mr Foy, M.B., told us: "With the appearance of plague there was a further rush for inoculation, and a large number were inoculated before the epidemic had taken a very strong hold, and to prevent having them elves evacuated from their homes." And the same witness also said, "The people of Betigeri made a great rush for inoculation, and thus avoided the general evacuation of the town by getting all the inmates of their houses inoculated."

When asked, with regard to the inoculations in Bangalore, whether the protection afforded to them was the only inducement for people to become inoculated there, Captain Leumann, I.M.S., said, "Partially the protection afforded, but chiefly, I think, to escape segregation."

Importance of encouragement, of inoculation, by influential members of the native communities of India.

90. It appears, then, to us to be evident that hitherto at all events the principal motive which has induced individuals to come forward to be inoculated has been the desire to obtain relief from the inconveniences of the plague measures ordinarily applied, rather than that of protecting themselves against an attack of plague. This is a somewhat discouraging conclusion; but we may, perhaps, hope that when the beneficial effects of inoculation are more widely known native opinion may be won over to its favour. Seeing what has been done in certain places by personal influence, like that exerted by H. H. the Aga Khan, we think that influential men in the native communities of India can do much to bring about this more satisfactory state of affairs. It is to be noticed that personal influence is particularly valuable wherever severe plague measures are not applied, and where, therefore, there are no material advantages in the form of a relaxation of measures which can be conferred upon the inoculated, and which can operate as an inducement for people to submit to inoculation. Moreover, the encouragement of inoculation by the personal influence of prominent members of the native communities will render it possible to dispense with such a system as that of encouraging inoculation by the grant of small compassionate allowances, which is liable to abuse.

91. In view of the fact that the policy of inoculations will give its best results only when inoculations have been undertaken before the advent of plague, or soon after it has broken out, it is important to note that experience in the past has shown that inoculation as a measure is much more easily applied in towns than in villages. A scrutiny of the figures relating to towns where inoculation has been largely resorted to will show that it takes a very considerable time to inoculate any sensible fraction of the population. In only one case, that of Mysore, has such a sensible fraction been inoculated before the outbreak of plague. In the case of villages, the time required is greater relatively to the number of the population, as we can see by a reference to the time which was occupied in the inoculations performed in the villages of the Baroda State, and at Lingdhal and Huilgol, which have been mentioned in a previous part of this Report.

Considerable time required to inoculate any sensible fraction of population of towns and villages.

92. We have hitherto dealt with the protective effective of inoculation in preventing attacks and deaths from plague, and we must now pass on to consider whether the adoption of inoculation as a measure is likely to have the beneficial effect claimed for it in preventing panic in an infected place with its attendant exodus of the population and consequent dislocation of trade. In this connexion Mr. Cappel, referring to both Hubli and Dharwar, said :—" In Hubli trade was not seriously interfered with at any time, and in Dharwar the course of business has never been interrupted. In Hubli, owing to weather conditions, the town was never evacuated on any large scale. In Dharwar about one-third of the people went out immediately on the outbreak of plague. But these people who went out were of the agricultural class, owning land round about, and their families and dependents. The 10,000 people who remained and who were enabled to remain by inoculation alone were the Government employés, the large mass of railway employés, and the business part of the community. There was no interruption to railway business, Government business, or commercial business in Dharwar. That state of things would have been impossible without inoculation, and if inoculation had not been carried out, or if inoculation had failed, the consequence would have been very serious, both in Hubli and Dharwar."

Effect of inoculation in preventing panic.

In speaking of Betigeri, Mr. Foy claimed advantages for inoculation similar to those claimed by Mr. Cappel in the cases of Hubli and Dharwar. He said that the people freely resorted to inoculation and " the consequence is that the main street of Betigeri has always presented a busy aspect, the shops remaining open, and some amount of trade is carried on."

Major Richard Baker, I.M.S., as we have already noted, told us with reference to Lanauli, that while the uninoculated part of the town was deserted on account of the plague, the inoculated part was full of people.

Regarding the causes of the exodus which took place from Bangalore City, Colonel Benson, I.M.S., told us that at the commencement of the outbreak the supply of vaccine ran short. " The result of sufficient vaccine not being available was that a very great number of people ran away from the town who would otherwise have remained." In Mysore City the inoculations, as we have seen, were largely done before plague got a hold on the town, and though an exodus took place, it was smaller than that from Bangalore City and the Civil and Military Station.

It is quite plain that panic could only be prevented by inoculation in so far as inoculation prevents severe mortality from plague. In other words, if the people are not inoculated sufficiently early and in sufficiently large numbers, a flight from an infected locality will not be prevented. Where, however, the inoculated have confidence in the efficacy of inoculation, the exodus will be that of uninoculated persons only, and the inoculated will continue to perform their avocations. On the other hand, when people dread inoculation, and fear that it may be insisted on, the adoption of inoculation as a plague policy may, as we have seen in the case of Dharwar and Calcutta, give rise to a far more formidable panic and exodus than any which would have been produced by the fear of plague. In response to a question whether the people of Dharwar would have left the town from fear of the plague, Mr. Cappel told us: "No, none of them would have moved. They would have waited till they were nearly all dead. They would have moved out in the next epidemic undoubtedly, but they would

not have learned their lesson before." Our conclusion, then, regarding this matter is that people after being inoculated have shown less disposition to fly from an infected place than the uninoculated, but that it is impossible to judge how far this result has been due to the sense of security derived from inoculation, or how far it has been due to the escape from the worries of other plague measures from which, as inoculated persons, they have been exempt.

Conclusions as to feasibility of adoption of inoculation as a plague measure.

93. With regard to the feasibility of adopting a general policy of inoculation, our conclusion, based upon the above considerations, may be set forth as follows:—

(1) Experience gained hitherto has shown that it is very seldom possible to get a large proportion of the inhabitants of an uninfected place inoculated.

(2) It has been possible, where the inducement of exemption from segregation and eviction has been offered, to get a large proportion of the inhabitants of an infected place inoculated quickly.

(3) It has been possible in one place,—Mysore City,—even where no inducement that touched the great mass of the people could be offered, to get a considerable proportion of the inhabitants of an infected place inoculated quickly.

(4) It has been possible also to induce a large proportion of particular communities, such as the Khojas of Bombay and Karachi, to be inoculated under the influence of their leaders.

Recommendations regarding adoption of inoculation as a plague measure.

94. Our recommendations are governed by these conclusions, as well as by the conclusions we have already drawn with regard to the protection conferred by inoculation. They are further governed by the consideration that it is necessary, as far as may be possible, to dispel the particular objections on account of which the people have hitherto refrained from inoculation. Moreover, our recommendations are based on the consideration that it is advisable to make the operation as effective as possible, as little inconvenient as possible to the person inoculated, and as easily carried out as possible by the inoculator.

I.—We have already insisted on the necessity for the accurate standardization of the vaccine, as being essential to the attainment of the best results, both as to the protection conferred and as to the duration of that protection. We have pointed out, also, that the introduction of an accurate system of standardization may possibly obviate the necessity of employing two successive inoculations.

II.—With a view to dispelling the natural fears of the people, and avoiding all unnecessary risk to the inoculated, and further, with a view to enabling the inoculations to be carried on with the least possible amount of attendant inconvenience, we would insist upon the necessity that stringent precautions should be taken to insure that all the vaccine used is quite free from contamination, and we would recommend that the volume of the necessary dose should be made as small as possible.

III.—With a view to removing any possible ground for distrust as to the conveyance of disease by inoculation from one person to another, we would recommend that the syringe should be sterilised in the presence of the person about to be inoculated.

IV.—We are of opinion that inoculations, under the safeguards and conditions stated above, should be encouraged wherever possible, and in particular, it seems to us desirable to encourage inoculation among disinfecting staffs and the attendants of Plague Hospitals.

Conclusion.

95. We cannot bring to a conclusion this consideration of anti-plague inoculation by Mr. Haffkine's prophylactic fluid without expressing our sense of the importance of the method which Mr. Haffkine has devised and of the results which have been achieved by it. The credit due to Mr. Haffkine is the greater because the difficulties with which he had to contend in this matter could only have been overcome by great zeal and endurance. Mr. Haffkine's work on anti-plague inoculation, while not based on any new scientific principle, constitutes, it seems to us, a great practical achievement in the region of preventive medicine.

No. 5096, dated Bombay, the 18th July 1899.

From—Major W. B. BANNERMAN, M.D., Indian Medical Service,

To—The Chief Secretary to the Government of Bombay, General Department (Plague).

In continuation of this office letter No. 1682, dated 31st March 1899, I have the honour to report on certain measures that have been taken to lessen still further the chance of any contaminated bottles being despatched from this Laboratory.

In the second paragraph of the letter above referred to, it is noted that "arrangements are now made according to the above results in order to ensure security from this source of error" *i.e.*, the use of improperly sterilised bottles. Since then 539 brews have been tested, representing 1,61,700 doses, with the result that a proportion of 3·1 per cent. have been found contaminated. This result will doubtless be much improved when the laboratory is established in the new quarters at Parel.

These results have been obtained in flasks which have been of necessity standing on the floor of the fermentation room for some months and which have been exposed during the process of decanting to unavoidable draughts.

These two sources of error will of course be removed in our new laboratory.

The mode of sterilizing the bottles has been changed with improved results. They are now placed in a hot-air sterilizer in which a temperature of 150°C (302° Fah.) is maintained for three hours. As the corks cannot be exposed to *dry* heat of this temperature, the bottles are plugged with cotton and the corks treated separately. The corks are now placed in large flasks full of water and boiled under a pressure of one atmosphere (15lb) for one hour on three days in succession. The water in which they are boiled is then poured off and the flasks are filled with a five per cent. solution of Tormalin. The large flasks having narrow necks, one or at most two corks only can reach the surface of the fluid at one time, so that any chance of aerial contamination is reduced to the lowest possible limit. To make sure that no organisms are adhering to the corks when the bottles are being closed the corks are, before insertion, plunged into paraffine wax boiling at a temperature of 300°Fah. (148°C). This effects the double purpose of immediately destroying any organisms that may be attached to the corks and of coating the corks with an impervious layer of wax, so that the fluid in the bottle cannot act upon them. The top of the bottle is then securedly covered with parchment paper tied tightly round the neck. The whole being again dipped into paraffine so as to render the bottles completely air-tight.

Ten days after bottling, one bottle of each brew is opened, and tested, before any of the other bottles of that brew are despatched. The result of this re-testing is what is now reported.

It will, I think be evident that all precautions are now taken to ensure that no contaminated bottles be sent out for use, so that medical men having occasion to use the vaccine may do so with the utmost confidence. As public confidence was at one time considerably shaken in the aseptic condition of the fluid, I would suggest that means be taken to make the above result known to the public.

I would request that a copy of this letter be sent to Director-General, Indian Medical Service, for his information.

No. 6092, dated 29th November 1899.

From—Major W. B. BANNERMAN, M.D., B. Sc., I.M.S., in charge Plague Research Laboratory,

To—The Chief Secretary to the Government of Bombay, General Department (Plague).

I have the honour to forward report of experiments conducted in this Laboratory, which had for their object to ascertain whether or not plague

prophylactic, made by growing the bacilli of plague in a medium manufactured from wheat, was as effective as that made in the ordinary manner. Only one experiment has been made, but it is so conclusive that I think no hesitation need now be felt in recommending vegetarians to be inoculated with this kind of vaccine, with full confidence that they will be as effectually protected as those inoculated with the ordinary material.

The experiment shows that, for rabbits at least, the wheat peptone vaccine is as effective as that prepared from meat peptone, and there is no reason to suppose that human beings will re-act differently.

2. I would suggest, therefore, that publicity be given to these results, so that those communities who have religious scruples against the use of vaccine prepared from goat's flesh, may be made aware that they can now be protected by the use of the wheat peptone prophylactic. I may add that there are several thousand doses of this new material now ready for distribution.

Experiment with plague vaccine prepared by growing the plague organism in wheat peptone broth, the culture being sterilised afterwards by heat.

Three rabbits were inoculated with different quantities of this vaccine as follows:—

7th November 1899 . Rabbit I, 1,384 grmms. weight received 6·25 c.c.
Ditto II, 1,163 „ „ „ 5 c.c.
Ditto III, 1,004 „ „ „ 2·5 c.c.

The rabbits showed no symptoms after these inoculations.

21st November 1899 . On this date each of the above three rabbits, as well as a control rabbit, was inoculated with ½ an agar tube of plague. This growth was the fourth remove from a rat which had died of plague and was 24 hours old. The result was as follows:—

Rabbit I showed no symptoms.
Ditto II „ „ „
Ditto III „ „ „

Control rabbit died 22 hours after inoculation.

A *post-mortem* examination was made of this latter rabbit. The glands in the groins and axillæ were found to be enlarged and congested. The peritoneum, both parietal and visceral layers showed numerous punctiform hæmorrhages. There were extensive hæmorrhages into both kidneys. There were also some small hæmorrhages in both lungs. Liver and spleen appeared normal. Strained preparations were made of the bloods, liver and spleen. In the blood very few plague bacilli were found. In both liver and spleen plague bacilli were very abundant and appeared to be in pure culture. Cultures were made from blood and liver. From both of these sources pure cultures of plague were obtained.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

IMPORTS OF COTTON, WHEAT, LINSEED, INDIGO, JUTE, TEA, AND RICE.

Quantity (in hundredweight) of COTTON imported by rail and river and by sea into Calcutta, the City of Bombay, and Karachi, in December 1899, and from 1st January to 31st December 1899, and in the corresponding periods of 1897 and 1898.

NOTIFICATIONS.

The 1st March 1900.

No. 567.—THE following Notices of the Board of Trade are published for general information:—

(F. & H. 1823.)

Board of Trade (Fisheries and Harbour Department), London, February 2, 1900.

The Board of Trade have received, through the Secretary of State for Foreign Affairs, a copy of a Despatch from Her Majesty's Representative at Montevideo, enclosing the following Quarantine Notice, *viz.*:—

(TRANSLATION.)

National Board of Health Ordinance No. 32, Montevideo, November 21, 1899.

Article 1.—Ordinances Nos. 25, 28, and 31 of 26th August, 27th September, and 23rd October are revoked.

Article 2.—In future arrivals from ports infected with bubonic plague will be subjected to ten days' quarantine of observation.

Arrivals from suspected ports will be subjected to five days' quarantine of observation.

Article 3.—Vessels which have had cases of sickness on board during the voyage, or which may arrive with such, shall be subjected to rigorous disinfection and then to fifteen days' quarantine of observation.

Article 4.—Quarantine of observation will count from the time when disinfection has been completed.

Passengers shall undergo quarantine of observation, and their baggage shall be disinfected at the lazaret of Flores Island.

Article 5.—No vessel shall be admitted to free pratique until she has been properly disinfected.

Article 6.—The importation of the following articles is prohibited: fresh hides, fresh animal remains, wool, feathers, personal effects, rags of all sorts and used textile fabrics, if disinfection is impossible.

Article 7.—For the purposes of this Ordinance, the ports of Oporto, Asuncion and Santos are declared to be infected and the ports of Portugal, Brazil to the south of Rio, and Paraguay are declared to be suspected.

JOAQUIN CANABAL,
President.

GABRIEL HONORÉ,
Secretary.

(F. & H. 1985.)

Board of Trade (Fisheries and Harbour Department), London, February 2, 1900.

The Board of Trade have received, through the Secretary of State for Foreign Affairs, a copy of a telegram from Her Majesty's Representative at Rio de Janeiro, intimating that Rio de Janeiro and Santos are declared free from plague, and that Bilbao Santander and Corunna are suspected.

(F. & H. 2034.)

Board of Trade (Fisheries and Harbour Department), London, February 2, 1900.

The Board of Trade have received, through the Secretary of State for Foreign Affairs, a copy of a telegram from Her Majesty's Representative at Rio de Janeiro, intimating that Rosario has been declared an infected port, and other ports of Argentine Republic suspected since 9th January.

(F. & H. 2041.)

Board of Trade (Fisheries and Harbour Department), London, February 2, 1900.

The Board of Trade have received, through the Secretary of State for Foreign Affairs, a copy of a telegram from Her Majesty's Representative at Madrid, reporting Rosario, Santa Fé (Argentia), foul from January 10.

(F. & H. 2042.)

Board of Trade (Fisheries and Harbour Department), London, February 2, 1900.

The Board of Trade have received, through the Secretary of State for Foreign Affairs, a copy of a telegram from Her Majesty's Representative at Rome, intimating that all ports of Argentine Republic on the Atlantic and Rio Parana declared infected with plague, and that usual measures are taken.

The 2nd March 1900.

No. 572.—The following document is published for general information :—

Despatch from Lord Currie to the Marquess of Salisbury, K.G., etc., No. 5 Commercial, dated the 25th January 1900.

My Lord,

I have the honour to report that a Sanitary Maritime Ordinance No. 1, issued yesterday, states that amongst the articles, of which the importation into Italy from places declared infected with bubonic plague is forbidden, animal hair (crini animali) is no longer to be included, and may henceforth be introduced into the Kingdom without restriction.

I have, etc.,
CURRIE.

JUDICIAL.

The 28th February 1900.

No. 1082-I.B.—Whereas the Rulers or Administrators of the States mentioned in the second column of the schedule hereto annexed have ceded to the British Government full jurisdiction, or all the jurisdiction they had, or the jurisdiction necessary for the administration of railways and of civil and criminal jurisdiction connected therewith, within the lands which lie within their respective territories and are occupied, or may be hereafter occupied, by the railways mentioned opposite their names, respectively, in the first column of the said schedule (including the lands occupied by stations and out-buildings and for other purposes connected with the railway); and whereas the Governor-General in Council now has jurisdiction within these lands:

In exercise of the aforesaid jurisdiction and of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act, 1879 (XXI of 1879), and of all other powers enabling him in this behalf, the Governor-General in Council is pleased to issue the following orders :—

1. All laws in force in the local areas mentioned in the third column of the schedule hereto annexed shall apply to the lands occupied by the aforesaid railways which lie within the States mentioned in the second column opposite to each of such local areas respectively.

2. The Governor of Bombay in Council and all officers subordinate to the Government of Bombay for the time being exercising executive authority (other than in connection with the administration of the Police) in the said local areas, respectively, shall exercise the like authority in the lands occupied by the aforesaid railways respectively (except in the case of the lands occupied by the Kolhapur State railway, in which railway the Political Agent, Kolhapur, shall exercise such executive and other powers as any Magistrate or Collector in any district of the Bombay Presidency may exercise within his district).

3. All Courts having for the time being jurisdiction within the said local areas respectively shall exercise the like jurisdiction within the lands occupied by the aforesaid railways, respectively, except the Kolhapur State railway.

4. The administration of the Police, except in the case of those railways in respect of which the Governor of Bombay in Council has been authorised to exercise the functions of a Local Government, shall be vested in the officers mentioned in the fourth column of the schedule, who shall exercise within the railway or railways mentioned opposite their names in the first column, which lie within the States mentioned in the second column, the same police powers as they at present exercise on the portions of the railways by which they are designated which lie within the local areas mentioned opposite their names in the third column, in subordination to the authorities to whom they may be for the time being, subordinate on those portions of the said railways respectively and in accordance with any orders the Local Government may from time to time issue in this regard.

5. The lands occupied by the said railways shall be deemed to be included for the purposes of clauses 2 and 3 of this notification within such taluka or other subdivision of the districts opposite to which they are mentioned in the first column of the schedule, as the Governor of Bombay in Council shall from time to time by notification in the Bombay Government Gazette direct:

Provided that nothing in this clause shall be deemed to affect any notification issued in accordance with the similar power conferred by any notification hereby repealed.

6. The following notifications of the Government of India in the Foreign Department are hereby repealed :—

1. No. 2383-I.B., dated the 24th June 1897.
2. No. 392-I.B., dated the 4th February 1898.

* As to this Railway see Home Department Notification No 93-P., dated the 11th February 1899, and Government of Bombay Notification No. 3839, dated the 3rd June 1898.

No. 1083-*I.B.*—Whereas the Chiefs of Morvi, Wankaner, Wadhwan, Lakhtar, Sayla, Muli, Dhrol and Rajkot and the Taluqdars of Gavridad and Kotharia in Kathiawar have ceded to the British Government the civil and criminal jurisdiction exercised by them within the lands which lie within their respective territories and are occupied by the Morvi railway and the Aji Bridge extension thereof (including the lands occupied by stations and out-buildings and for all other purposes connected with the railway, and the lands occupied by culverts or bridges over which that railway passes); and whereas the Governor-General in Council now has full jurisdiction within those lands;

And whereas the Rulers or Administrators of the other States (except the States of Junagad and Gondal in respect of the Jetalsar-Verawal section of the Bhavnagar-Gondal-Junagad-Porbandar railway) mentioned in the second column of the schedule hereto annexed have ceded to the British Government full and exclusive power and jurisdiction of every kind or all the jurisdiction they had, or the jurisdiction necessary for the administration of railways and of civil and criminal jurisdiction connected therewith, within the lands which lie within their respective territories, and are occupied, or may hereafter be occupied, by the railways mentioned opposite their names respectively in the first column of the said schedule (including the lands occupied by stations and out-buildings and for other purposes connected with the railway); and whereas the Governor-General in Council now has jurisdiction within these lands;

And whereas the Chiefs of Junagad and Gondal have made over to the British Government all the criminal jurisdiction they possess within the portions of their respective territories which have been assigned for the purposes of the Jetalsar-Verawal section (Junagad State railway) of the Bhavnagar Gondal-Junagad-Porbandar railway; and whereas they have agreed that all suits of a civil nature respecting loss or damage to goods or injury to persons within the limits of that section, and that cases of a civil nature arising out of the application of the Indian Railways Act, 1890 (IX of 1890), thereto shall be heard and decided in the Kathiawar Political Agency Courts; provided that the Chief of Junagad as proprietor of the section or the State of Junagad shall not be directly impleaded in such cases, but the Railway management as represented by the Manager, and that any decrees that may be passed shall be executed against the railway property and not against the said Chief or State; and provided also that all other civil jurisdiction within the said section which passes through the States of Junagad and Gondal respectively shall continue and be exercised as heretofore by those States; and whereas the Governor-General in Council now has full criminal jurisdiction and certain civil jurisdiction within the aforesaid limits:

In exercise of the aforesaid jurisdiction and of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act, 1879 (XXI of 1879), and of all other powers enabling him in this behalf, the Governor-General in Council is pleased to issue the following orders:—

1. The provisions, so far as they may be suitable, and as amended for the time being and from time to time by subsequent enactments, of the Acts mentioned below are hereby applied to the aforesaid lands, except those occupied by the Kolhapur State railway:—

1. Indian Penal Code (Act XLV of 1860);
2. The Police Act, 1861 (V of 1861);
3. The Whipping Act, 1864 (VI of 1864);
4. The Indian Succession Act, 1865 (X of 1865);
5. The Court Fees Act, 1870 (VII of 1870);
6. The Cattle Trespass Act, 1871 (I of 1871);
7. The Indian Evidence Act, 1872 (I of 1872);
8. The Indian Contract Act, 1872 (IX of 1872);
9. The Indian Registration Act, 1877 (III of 1877);
10. The Indian Limitation Act, 1877 (XV of 1877);
11. The Opium Act, 1878 (I of 1878);
12. The Probate and Administration Act, 1881 (V of 1881);
13. The Code of Civil Procedure (Act XIV of 1882);

14. The Indian Telegraph Act, 1885 (XIII of 1885);
15. The Provincial Small Cause Courts Act, 1887 (IX of 1887);
16. The Police Act, 1888 (III of 1888);
17. The Debtors Act, 1888 (VI of 1888);
18. The General Clauses Act, 1897 (X of 1897);
19. The Code of Criminal Procedure, 1898 (Act V of 1898);
20. The Indian Post Office Act, 1898 (VI of 1898); and
21. The Indian Stamp Act, 1899 (II of 1899):

Provided that the Acts mentioned above shall not, in their application to any of the aforesaid lands lying within States in the Kathiawar Agency in which Political Officers of the Agency exercise jurisdiction, be construed to repeal, supersede, or override any special or local law which relates to the subject-matter of these Acts and is for the time being in force in that Agency:

Provided also that, for the purpose of facilitating the application of the provisions of the enactments hereby applied, any Court within the aforesaid lands may construe them with such alterations, not affecting the substance, as may be necessary or proper to adapt them to the matter before the Court:

Provided further that, except in the case of the railways within the Kathiawar Agency, the Code of Criminal Procedure, 1898, shall be read subject to the following modifications, namely:—

(a) trials before the Court of Session may, in the discretion of the Judge, be conducted without the aid of jury or assessors;

(b) sentences of death or of transportation or imprisonment for more than seven years passed by the Court of Session shall be referred for confirmation to the Governor of Bombay in Council and in any case so referred the Governor of Bombay in Council may either confirm the sentence or pass any other sentence warranted by law, or may annul the conviction and order a new trial on the same or an amended charge, or may acquit the accused person; and

(c) appeals from Magistrates of the 2nd class shall lie to the Court of Session and not to the District Magistrate.

II. (1) For the purposes of the exercise of criminal jurisdiction within the aforesaid lands—

(a) every officer mentioned in the third, fourth or fifth column of the schedule hereto annexed shall exercise within such portions of the aforesaid railways mentioned opposite his name in the first column of the schedule as are situate within the territories of the State or States mentioned opposite his name in the second column, the powers of a District Magistrate, the powers of a Magistrate of the 1st class and the powers of a Magistrate of the 2nd class as described in the Code of Criminal Procedure, 1898 (Act V of 1898), respectively; and

(b) every officer, Court or authority mentioned in the sixth or seventh column of the schedule hereto annexed shall exercise within such portions of the aforesaid railways mentioned opposite his name in the first column as are situate within the territories of the State or States mentioned opposite his name in the second column, the powers of a Court of Session or a High Court, as the case may be, in respect of all offences over which jurisdiction is exercised by any officer mentioned in the third and fourth columns of the schedule.

(2) This part of this notification applies to all proceedings except—

(a) proceedings against European British subjects or persons jointly charged with European British subjects; and

(b) proceedings pending at the date of this notification which should be carried on as if this notification had not been issued.

III. (1) For the purposes of the exercise of civil jurisdiction—

(a) in the aforesaid lands except those occupied by the Kolhapur State railway, the officers mentioned in the eighth column of the schedule hereto annexed, shall exercise within such portions of these railways mentioned opposite his name or their names in the first column, as are situate within the territories of the State or States mentioned opposite his name or their names in the second column, the same jurisdiction as is exercised by him or by them within the limits of the Kathiawar Political Agency or the Palanpur Superintendency as the case may be :

Provided that, in the case of the lands occupied by the Jetalsar-Verawal Section of the Bhavnagar-Gondal-Junagad-Porbandar railway, the officers mentioned opposite that Section in the eighth column, shall exercise civil jurisdiction only in the case of suits against the aforesaid railway of the nature described in the preamble to this notification ; and

(b) in the lands occupied by the Rajputana-Malwa railway in the Palanpur and Baroda States and the Kolhapur State railway every officer or authority mentioned in the ninth, tenth and eleventh columns of the said schedule respectively shall exercise the powers mentioned in the headings to those columns or in the columns themselves in respect of those portions of these railways respectively as lie in the States above mentioned and opposite to which his name is placed in that schedule.

2. This part of this notification applies to all proceedings except proceedings pending at the date of this notification which shall be carried on as if it had not been issued.

IV.—The following notifications of the Government of India in the Foreign Department are hereby cancelled :—

1. 3817-I., dated the 25th September 1888, as amended by No. 3344-I., dated the 10th October 1895, and No. 1138-I.B., dated the 23rd March 1897.

STAFF CORPS.

No. 224.—The undermentioned officer is admitted to the Indian Staff Corps, with effect from the date specified, subject to confirmation by the Secretary of State for India :—

Lieutenant Charles Frederick Woodward, Dorsetshire Regiment, officiating Wing Officer, 3rd Regiment of Bombay (Light) Infantry. 4th February 1900.

COMMANDS.

DISTRICT.

No. 225.—Colonel (Brigadier-General) G. Simpson, C.B., Indian Staff Corps, Deputy Adjutant-General, Madras Command, to command a 2nd class district in the Madras Command, with the temporary rank of Brigadier General while so employed, *vice* Colonel S. E. Rolland. Dated 12th February 1900.

STATIONS.

No. 226.—Colonel W. Hailes, Indian Staff Corps, Assistant Adjutant-General, District Staff, officiating Colonel on the Staff, Mooltan, is confirmed as a Colonel on the Staff in the Punjab Command, *vice* Colonel G. Henry, appointed Deputy Adjutant-General, Madras Command. Dated 5th February 1900.

CANTONMENTS.

No. 227—The following draft of certain rules which it is proposed to make for the Cantonment of Kamptee in exercise of the powers conferred by section 26, clause (17), and section 27, of the Cantonments Act, 1889 (XIII of 1889), is published for the information of persons likely to be affected thereby, and notice is given that the draft will be taken into consideration on or after the third day of April 1900.

2. Any objection or suggestion received from any person with respect to the draft before the date aforesaid will be considered by the Governor General in Council.

Draft rules.

1. (*1*) Carts bringing cotton for sale into the Cantonment of Kamptee shall not stand in any place other than the cotton market.

(*2*) The following shall be the boundaries of the cotton market, namely :—

On the east, the centre road from the Goorjee to Friday market;
On the south, the road leading from the Serai to Friday market;
On the west, the nullah running from the Serai to Nai Modin's Masjid; and
On the north, a line drawn parallel to, and at a distance of 850 feet from, the road which forms the boundary on the south.

2. (*1*) Carts bringing hides for sale into the said cantonment shall not stand in any place other than the hide market.

(*2*) The following shall be the boundaries of the hide market, namely :—

On the east, Gowleepura;
On the south, Field No. 106;
On the west, the Kurmana road; and
On the north, Playfair *peit*.

3. No cart shall quit the cotton or hide market, as the case may be, unless and until the market-dues leviable in respect of any cotton or hides sold therein have been paid to the muharrir in charge of the market.

4. A receipt shall be granted by the muharrir in charge for all market-dues paid.

5. If the owner or person in charge of any cart so desires, the muharrir in charge shall enter in the receipt the details of all sales effected or agreed to.

6. Whoever commits a breach of rule 1, rule 2 or rule 3, shall be punishable with fine which may extend to fifty rupees.

No. 221 R. T.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—RAILWAY TRAFFIC.

Calcutta, the 26th February 1900.

READ—

Sections 3 (4), 16 (2), 47 and 148 (1) of the Indian Railways Act (IX) of 1890.

Government of India, Public Works Department, notification No. 480½, dated the 30th October 1890, and the Government of India resolution No. 736 R. T., dated the 17th October 1890, published thereunder.

Memorandum from the Consulting Engineer to the Government of India for Railways, Calcutta, No. 705, dated the 8th February 1900, forwarding letter from the Agent, East Indian Railway Company, No. 150 G., dated the 3rd February 1900.

OBSERVATIONS.—The Agent of the East Indian Railway Company has applied for leave to adopt the General Rules for working railways under construction and not used for the public carriage of passengers, animals, or goods, which rules were published in the *Gazette of India* of the 8th November 1890 under Public Works Department notification No. 480½, dated the 30th October 1890, on the Pandra branch of the Jherria extension of that railway.

RESOLUTION.—The Governor General in Council is pleased to sanction the application of the General Rules which are referred to in the foregoing observations to the Pandra branch of the Jherria extension of the East Indian railway which has been sanctioned for construction.

ORDER.—Ordered that the General Rules, which have already been published in the *Gazette of India* of the 8th November 1890, be further notified

to the railway servants and to the public by a copy thereof being kept open to inspection free of any charge in the office of the engineer in charge of the construction of the railway.

Ordered, also, that this resolution be communicated to the Consulting Engineer to the Government of India for Railways, Calcutta, for information and guidance, and that it be published under a notification in Part I of the *Gazette of India.*

No. 87.—The following is published for general information :—

OBSERVATIONS.—The Agent of the East Indian Railway Company has applied that the General Rules for working open lines of railway in British India, which have been published under the Government of India, Public Works Department, notification No. 118, dated the 21st March 1895 (*vide* the *Gazette of India* of the 23rd March 1895), as modified by the Government of India circulars Nos. 3 Railway, dated the 22nd May 1896, 3 Railway, dated the 3rd February 1897, 12 Railway, dated the 9th December 1897, I Railway, dated the 3rd March 1898, III Railway, dated the 15th March 1898, I Railway, dated the 26th April 1899, V Railway, dated the 3rd July 1899, X Railway, dated the 1st December 1899, and IV Railway, dated the 19th January 1900, which were published under Public Works Department notifications Nos. 257, dated the 28th May 1896, 55, dated the 5th February 1897, 3, dated the 5th January 1898, 104, dated the 10th March 1898, 134, dated the 23rd March 1898, 197, dated the 5th May 1899, 298, dated the 14th July 1899, 517, dated the 7th December 1899, and 29, dated the 25th January 1900 (*vide* the *Gazette of India* of the 30th May 1896, 6th February 1897, 8th January 1898, 12th March 1898, 26th March 1898, 6th May 1899, 15th July 1899, 9th December 1899, and 27th January 1900), may be made applicable to the Pandra branch of the Jherria extension of that railway.

RESOLUTION.—The Governor General in Council is pleased to sanction the application of the General Rules for working railways open for traffic which may, for the time being and hereafter from time to time, be in force on the East Indian railway, to the Pandra branch of the Jherria extension of that railway, with effect from the date or dates on which the said branch or portions thereof may be opened for the public carriage of passengers, animals or goods.

ORDER.—Ordered that this resolution be published under a notification in Part I of the *Gazette of India*, as required by section 47, sub-section (*3*), of the Indian Railways Act, 1890; also that the General Rules cited in the foregoing observations—which have already been published in the *Gazette of India*—be kept at railway stations as directed by sub-section (*6*) of the same section.

Ordered, also, that this resolution be communicated to the Consulting Engineer to the Government of India for Railways, Calcutta, for information and guidance.

F. R. UPCOTT,
Secretary to the Government of India,
Public Works Department, Railways.

The 1st March 1900.

No. 81.—The following is published for general information :—

No. 293 G.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—GENERAL.

Re-organization of the administrative classes in the Public Works Department.

Calcutta, the 1st March 1900.

READ—

Despatch from Secretary of State, No. 29 P. W., dated 14th October 1897, paragraphs 17 and 18.
Despatch to Secretary of State, No. 11 P. W., dated 24th March 1898.
Despatch from Secretary of State, No 21 P. W., dated 7th July 1898.
Despatch to Secretary of State, No. 27 P. W., dated 14th September 1899.
Despatch from Secretary of State, No. 53 P. W., dated 14th December 1899.

RESOLUTION.—The Government of India have had under consideration the question of re-organizing the administrative appointments in the Public Works

Department comprising the several classes of Chief and Superintending Engineers.

The rate of pay in these classes has undergone no change since 1870, while that of Executive and Assistant Engineers has been somewhat frequently changed. The last change was in 1893 when the rate of pay of Executive Engineers, 1st grade, was raised to Rs. 1,000, and, with increments, to Rs. 1,100 a month.

Some inconvenience has arisen from the approximation of the pay of Executive Engineers, 1st grade, to that of Superintending Engineers, 3rd class, and it has also been felt that the pay of the latter class was to some extent inadequate to the responsibilities of their duties.

The appointments of Chief Engineers and Superintending Engineers for the several Provincial lists under the Government of India, which comprise the appointments of the Buildings and Roads Branches, and of the Railway Branch, have hitherto formed one list. The promotions to the lowest or 3rd class in each of the ranks of Chief and Superintending Engineers have, like the appointments in the Executive and Assistant classes, been on the separate lists noted in the margin, but promotions to the 2nd and 1st classes of these ranks have been made on a combined list.

Bengal .
North-Western Provinces and Oudh
Punjab .
Burma .
Minor Administrations .
State Railways .

2. Public Works Department resolution No. 3386 G., dated 23rd December 1897, provided for a re-organization of the Public Works Department Secretariat of the Government of India based on the idea of separating the Department into two Branches, the Railway, and the Irrigation Roads and Buildings, each under its own Secretary. It has now been decided to complete the separation of the two Branches by placing the Chief and Superintending Engineers in each Branch on separate lists.

It has not been possible hitherto to effect this complete separation under the existing rules for determining the strength in each class of Chief and Superintending Engineers, and so long as the sanctioned number of appointments in the 1st class of Chief Engineers has been limited to three. Hitherto these three 1st class appointments have been held by the three Chief Engineers on the combined list whose personal qualifications were highest, without reference to the Branch in which they were serving, a Chief Engineer in the Railways being as eligible as one in the Irrigation Roads and Buildings for promotion to these 1st class appointments. It has now been decided, with the approval of the Secretary of State, to reserve the three existing 1st class appointments exclusively for officers in the latter, and His Lordship has also sanctioned the creation of two additional 1st class appointments in this Branch, a corresponding reduction being made in the combined strength of the 2nd and 3rd classes. This increase in the number of 1st class appointments to be reserved for this Branch, has been sanctioned in recognition of the increased importance of the Province of Burma, which now forms a Local Government, and of the fact that, under the recent organization of the Secretariat, Officers in the Buildings and Roads will no longer share the chance which they had previously enjoyed with officers of other Branches, of promotion to the post hitherto known by the title of Secretary to the Government of India in the Public Works Department, while officers of the Irrigation Branch will also be eligible only for the appointment of Secretary, Irrigation Roads and Buildings, which must be filled by the Inspector General of Irrigation.

3. In order to compensate the Railways for the reservation of the three existing 1st class appointments for the officers of the Irrigation Roads and Buildings the Secretary of State has also sanctioned a proposal that one of the four Chief Engineer appointments in the Railways should be in the 1st class. There will also be, as at present, two other appointments, outside this scale, ranking as Chief Engineer, 1st class, which will be open only to Engineers of the Railways, and two other appointments of the same rank and pay in the Superior Revenue Establishment of State Railways, which are open to Railway Engineers as well as to officers of the Superior Revenue Establishment.

4. Six of the twelve Chief Engineer appointments belonging to the two lists, Railway, and Irrigation Roads and Buildings, under the Government of India, will thus, in future, belong to the 1st class, and there will be three appointments

...n each of the other two classes. The Railways will have two appointments in the 2nd class and one in the 3rd, while the Irrigation Roads and Buildings will have one in the 2nd and two in the 3rd class. In the event of future additions to or deductions from the 2nd and 3rd class appointments, the numbers will be recalculated under Public Works Department Code, Volume I, Chapter I, paragraph 57. The arrangement agreed to in Public Works Department resolution No. 1194G., dated 6th September 1883, in reference to the Bombay list by which the appointment of Chief Engineer, 2nd class, goes to the senior officer of the two lists, when a vacancy occurs, will continue to apply as between the Bombay list and the list of the Irrigation Buildings and Roads Branch under the Government of India. The promotions admissible under these orders will be notified in due course.

No modification is proposed in the sanctioned scales for Chief Engineers in the Madras and Bombay Presidencies, in each of which a 1st class appointment has always been reserved.

5. As regards the strength of the various classes of Superintending Engineers, the distribution has hitherto been effected, in accordance with the rule prescribed in Public Works Department Code, Volume I, Chapter I, paragraph 58, on the total strength of Superintending Engineers on the Government of India list, that is on that of the combined Branches. In future the distribution will be made separately for each of these Branches. The total number of Superintending Engineer appointments will vary from time to time in accordance with requirements. Under the existing sanction the distribution between the two Branches of the graded administrative appointments of Chief and Superintending Engineer under the Government of India will be as in margin.

	Irrigation, Roads and Bldgs.	Railways.	Total.
Chief Engineers, 1st class	5	1	6
" " 2nd "	1	2	3
" " 3rd "	2	1	3
Superintending Engineers, 1st class	10	5	15
" " 2nd "	10	4	14
" " 3rd "	9	4	13

6. The official designations of the heads of the Railway and General Branches will be respectively :—

Secretary to Government of India, Public Works Department, Railways.
Secretary to Government of India, Public Works Department, Irrigation Roads and Buildings.

7. As regards the rate of pay drawn by Superintending Engineers the Secretary of State has sanctioned the pay of the 3rd class being increased from Rs. 1,100 to Rs. 1,250, and that of the 2nd class from Rs. 1,350 to Rs. 1,400. This sanction will have effect from the 1st January 1900 and will be applicable to all lists, including those of Madras and Bombay.

ORDER.—Ordered that this resolution be communicated to the Local Governments, Administrations and Officers noted in the margin.

The Governments of Madras and Bombay, Public Works Department, General and Railway Branches.
The Governments of Bengal, the North-Western Provinces and Oudh, and the Punjab, Public Works Department.
The Government of Burma, Public Works Department, General and Railway Branches
The Chief Commissioners of the Central Provinces, Assam and Coorg.
The Resident at Hyderabad.
The Agents to the Governor General for Rajputana, Central India and Baluchistan.
The Accountant General, Public Works Department.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Assam.
The Director General of Telegraphs.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

INVENTIONS and DESIGNS.

Calcutta, the 28th February 1900.

NOTIFICATIONS.

No. 791 P.—APPLICATIONS in respect of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act during the week ending 24th February 1900:—

No. 75 of 1900.—Albert Taylor, engineer, of Daisy Croft, Hipperholme, near Halifax, in the county of York, England, Willie Brooke and Newton Brooke, quarry owners, both of Lightcliffe, near Halifax aforesaid, and Aspinall Brooke, quarry owner, of Hipperholme, aforesaid. *Improvements in and in connection with hydraulic presses and in the manufacture thereby of artificial stone slabs or the like.*

No. 76 of 1900.—William Jackson, engineer, of Thorngrove, Mannofield, Aberdeen, North Britain. *Improvements in apparatus for dividing tea leaves, coffee or other materials.*

No. 77 of 1900.—Baday Sahib & Co., plough manufacturers, Brucepett, Bellary. *Improved plough body frames.*

No. 78 of 1900.—Baday Sahib & Co., plough manufacturers, Brucepett, Bellary. *Improved plough shares.*

No. 79 of 1900.—Baday Sahib & Co., plough manufacturers, Brucepett, Bellary. *Improved plough shares.*

No. 792 P.—THE undermentioned design has been registered, under the provisions of the Inventions and Designs Act, 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma. This and other designs are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 4 D of 1900.—J. N. Johannes, sole proprietor, of Johannes & Co., photographers, Mandalay. *A calendar, a show card or business advertisement.*

No. 793 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, North-Western Provinces and Oudh. These and other specifications are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 477 of 1899.—Ralph Davenport Mershon, electrical engineer, of 120, Broadway, New York, in the state of New York, U. S. A. *Improvements relating to the distribution of electrical power.* (Specification filed 23 February 1900.)

No. 478 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburg, in the County of Allegheny, State of Pennsylvania, U. S. A. *Improvements in systems of electrical distribution.* (Specification filed 23 February 1900.)

No. 479 of 1899.—Benjamin Garver Lamme, electrical engineer, of 230, Stratford Avenue, Pittsburg, in the County of Allegheny, State of Pennsylvania, U. S. A. *Improvements in dynamo-electric machines.* (Specification filed 23 February 1900.)

No. 794 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 90 of 1888.—Samuel Cleland Davidson. *Improvements in apparatus for employing heated air in drying or baking vegetable or other substances.* (From 6 March 1900 to 6 March 1901.)

No. 153 of 1888.—John Robert Jefferies and James King. *Improvements in thrashing machines.* (From 1 March 1900 to 1 March 1901.)

No. 96 of 1890.—Engelberg Huller company. *Machine for hulling, cleaning and polishing rice and other grain.* (From 2 March 1900 to 2 March 1901.)

No. 128 of 1890.—Ellis Carr. *Improvements in tin vessls for packing biscuits and other perishable goods and instruments for opening such vessels.* (From 25 February 1900 to 25 February 1901.)

No. 143 of 1890.—Carl Lindc. *Improvements in refrigerating machinery.* (From 2 April 1900 to 2 April 1901.)

No. 260 of 1890.—Samuel Cleland Davidson. *Improvements in the manufacture of tea and in apparatus therefor.* (From 24 March 1900 to 24 March 1901.)

No. 121 of 1893.—Charles Ewing. *Rolling stock for use on single-rail tramways or railways.* (From 27 February 1900 to 27 February 1901.)

No. 220 of 1893.—Thomas McGuire. *A new or improved waterproof composition for stopping leaks in roofs, floors, walls and the like to be called "McGuire's patent waterproof composition."* (From 22 February 1900 to 22 February 1901.)

No. 282 of 1893.—Shyama Charan Chunder, Khetter Mohan Chunder, and Gour Mohan Chunder. *Levelling, prismatic and other compasses.* (From 24 February 1900 to 24 February 1901.)

No. 354 of 1894.—Samuel Cleland Davidson. *Improvements in apparatus for exposing tea, coffee, cocoa, grain and other substances, to the drying or other action of air, vapor or gases.* (From 20 March 1900 to 20 March 1901.)

No. 86 of 1895.—William Duffy. *Improvements relating to wood block paving for roadways, streets and thoroughfares, applicable also to other purposes.* (From 14 August 1900 to 14 August 1901.)

No. 153 of 1895.—Charles Henry Palmer, John William Denmead and Joseph Alvirtus Baughman. *Improvements in and relating to machines for filling boxes with matches.* (From 31 May 1900 to 31 May 1901.)

No. 408 of 1895.—The Badische Anilin and Soda Fabrik. *The manufacture and production of new azo-colouring matters.* (From 22 February 1900 to 22 February 1901.)

No. 81 of 1896.—Max Guilleaume. *Improvements in electric cables.* (From 2 June 1900 to 2 June 1901.)

No. 795 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2), of the said Act, the exclusive privilege of making, selling and using the said inventions in British India, and of authorising others so to do, has ceased :—

No. 307 of 1894.—William Jopp. *Improvements in and relating to locking devices.* (Specification filed 22 November 1895.)

No 156 of 1895.—John James Tong and Joseph Robert Wood. *Improvements in apparatus for filtering oils and the like.* (Specification filed 22 November 1895.)

No. 186 of 1895.—Josef Polke. *Improvements in the process and apparatus for the manufacture of barrels.* (Specification filed 22 November 1895.)

No. 187 of 1895.—Frank Sillhengst. *A device for operating fans (punkahs) in workshops and dwelling rooms.* (Specification filed 1 November 1895.)

No. 277 of 1895.—William Mather. *Improvements in the manufacture of mosaic floor cloth and apparatus for that purpose.* (Specification filed 23 November 1895.)

No. 282 of 1895.—The Cassel Gold extracting company, limited. *Improvements in extracting gold and silver from ores and the like.* (Specification filed 22 November 1895.)

Fee in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof—

The sum of R50 for each of the above inventions.

No. 292 of 1894.—The Badische Anilin and Soda Fabrik. *The manufacture and production and application of new colouring matters or dyes from naphthalene.* (Specification filed 20 November 1894.)

Fee in respect of the continuance of an exclusive privilege—

4 (*b*) After the expiration of the fourth year and before the expiration of the fifth year from the date of the filing of the specification.

The sum of R50 for the above invention.

No. 246 of 1891.—William James Sawyer. *An improved inkstand.* (Specification filed 23 November 1891.)

Fee in respect of the continuance of an exclusive privilege—

4 (*e*) After the expiration of the seventh year and before the expiration of the eighth year from the date of the filing of the specification—

The sum of R50 for the above invention.

NOTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be addressed to the "Secretary to the Government of India, Department of Revenue and Agriculture (PATENTS BRANCH), CALCUTTA."

The Office of the Secretary under the Act is open for the transaction of business from 11 A.M. to 4 P.M. on all days except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's office are now on sale to the public at one anna and eight annas a copy, respectively.

Attention is requested to the rules made by the Government on the 10th October, 1895, in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitor's room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified; or, if the tenth day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

S. C. HILL,

Offg. Secy. under the Inventions and Designs Act, 1888.

Ditto ditto . .	5th ,,	Per land route *viâ* Chittagong.
Ditto ditto At 5-30 A.M.	6th ,,	Ditto.
Port Blair	5th ,,	Per Steamer *Viâ* Rangoon.

*Although the date entered in column 2 is, as far as can be calculated, the latest safe date of posting for the next Mail Steamer, full allowance being made for the steamer being in advance of

her published timing, Mails for the places mentioned in column 1 are despatched daily to Colombo, so that they may proceed by any steamer that has been unusually accelerated or retarded, or by any special opportunity that may be afforded by a steamer not belonging to one of the regular lines.

The letter-box for Inland articles will be cleared for the forenoon Mails at the following hours:—

For Goalundo and Chittagong Express train at 5-30 A.M.
For Eastern districts as far as Dacca at 6-30 A.M.
For Midnapore, Orissa and Madras Presidency at 7-30 A.M.
For Bombay Mail *viâ* Nagpur at 7-30 A.M. and with a late fee of ½ anna up to 8 A.M.
For Khulna Line at 8-15 A.M.

The letter-box will be cleared for the evening Mails without late fee at the following hours, *viz.*:—

For E. I. Railway Loop Mail at 2-30 P.M. and up to 2-55 P.M. with a late fee of ½ anna.
For Darjeeling and Assam at 3-25 P.M. without late fee, and 3-50 P.M. with late fee of ½ anna.
For the Bombay Mail *viâ* Jubbulpore carrying also Mails for Ceylon at 6 P.M.
For the Punjab Mail at 7-30 P.M.
For Midnapore District only at 7-30 P.M.
For Khulna Mail at 7-30 P.M.
For Eastern Bengal Mail at 7-30 P.M.

Late letters bearing a fee of ½ anna will be received for the Bombay Mail *viâ* Jubbulpore up to 6-30 P.M. and for other Mails from 7-30 to 8 P.M., and from 8-0 to 8-45 P.M. with a late fee of 1 anna for the Punjab and Eastern Bengal Mails only.

Late registered articles will be received between the following hours:—

For Offices served by the Bombay Mail *viâ* Allahabad and Jubbulpore from 5 P.M. to 6-15 P.M.
For Offices served by the Punjab Mail from 6 P.M. to 7 P.M.
For Offices served by the Eastern Bengal Mail from 6 P.M. to 7 P.M.
For Offices served by the Khulna Mail from 6 P.M. to 7 P.M.

The late fee on each registered letter will be two annas, which must be prepaid in stamps on the letter.

Articles for Burma and for Port Blair by Sea are received without late fee up to 7-30 P.M., after which hour they are received fully prepaid and bearing an extra stamp of ½ anna up to 8 P.M.

On the latest safe day of despatch of the Mail for the Australasian Colonies *viâ* Tuticorin, the letter-box for Foreign articles will be cleared for the last time for articles without the late fee at 6 P.M., and late letters and papers fully prepaid will be received up to 6-30 P.M.

On the day of despatch of the Mail for Europe (Thursday), the letter-box for Foreign articles will be cleared for the last time for articles without the late fee at 6-30 P.M., and late letters and papers fully prepaid will be received up to 6-45 P.M. Late registered articles will be received from 5 to 6 P.M. On other days the letter-box for Foreign articles will be cleared for the last time without the late fee at 6 P.M., and late letters and papers will be received up to 6-30 P.M. for despatch by any Foreign Mails *viâ* Tuticorin, Madras, or Bombay the same night and up to 8-30 P.M., late letters and papers up to 9 P.M., for any Foreign Mails despatched by Sea. The late fee for Foreign articles is 4 annas, which must be prepaid in stamps affixed to the articles.

JOHN OWENS,

Presidency Postmaster, Calcutta.

PUBLIC WORKS DEPARTMENT.

NOTIFICATION.

Simla, the 20th September, 1893.

A Registry Office for men of all grades out of employ is kept up by the Principal, Thomason College, Roorkee. Officers requiring men are requested to apply to Principal.

J. CLIBBORN, *Major, I.S.C.,*

Principal, Thomason College.

NOTICE.

It is notified, for information of Military and Civil officers, that services of Shams-ul-Ulama, Shaikh Mahmud Gilani, Persian Instructor, and Mr. R. F. Azoo, Arabic Instructor, have been specially retained by Government for giving instruction to candidates intending to present themselves for examinations in Arabic and Persian before the Board of Examiners. Gentlemen requiring their tuition should communicate with them at the office of the Board of Examiners.

GEORGE WATT,

Reporter on Economic Products to the Government of India.

CALCUTTA,
The 6th September, 1897.

FOR SALE.

Reports on the Inspection of Mines in India during 1893-94 and 1894-95. By JAMES GRUNDY, Inspector of Mines in India (1894 and 1896). Price R1 and R2, respectively.

To be had on application to the Registrar, Geological Survey of India, Calcutta.

Catalogue of Books procurable from Thomason College Book Depot, Roorkee.

Application to be made to Curator.

CASH MUST ACCOMPANY ORDER. ARTICLES WILL BE SENT BY VALUE-PAYABLE POST TO PERSONS IN GOVERNMENT EMPLOYMENT ONLY.

It is advised that letters containing remittances be registered.

N.B.—The Revised Prices herein entered cover the cost of packing, postage, and other incidental charges (except commission for Value-payable supplies), and are for all purchasers other than resident College Students.

ROORKEE TREATISE ON CIVIL ENGINEERING IN INDIA.

Royal Octavo, with numerous Plates.

Volumes I and II are published in separate convenient sized Sections, as below, but can be bound up if required :—

VOLUME I.*

Section	I.	Building Materials (1898),	R2-0.
„	II.	Masonry (1898),	R1-4.
„	III.	Carpentry (1898),	R1-8.
„	IV.	Earthwork (1892),	R1-4.
„	V.	Tools and Plant (never published).	

VOLUME II.*

Section	VI.	Buildings (1899),	R1-4.
„	VII.	Bridges (1897),	R4-4.
„	VIII.	Roads (1897),	R1-8.
„	IX.	Railways (1891),	R1-4.
„	X.	Irrigation Works.	(Under revision.)

ROORKEE MANUAL OF APPLIED MECHANICS.

Vol. I. Direct and Transverse Strain, principally by Analytical Methods. R7

„ II. The Stability of Structures, mostly by Graphic Methods (in the Press).

MANUALS.

VII. **Surveying** (by Major Firebrace, R.E.) (7th edition, with Curve Table). R3.

XIII. **Drawing** (by Lieut. R. Pulford, R.E.). † R6.

XIIIa. **Drawing, First Principles of Geometrical** (by do.) R1-4.

XIV. **Simple Applied Mechanics**, (3rd edition), Parts I and II in one. R1-8.

Simple Applied Mechanics, Part II (1st edition). 8a.

XV. **Examples of Estimating.** Comprising a progressive series of Estimates (with Plans of Buildings and Bridges, worked in detail). By P. Keay, Esq., and revised by C. C. Sullivan, Esq., Head Master (5th edition). R3-12.

XVI. **Earthwork Estimating**, with Practical Tables and Diagrams. By Major A. M. Brandreth, R.E. R1.

XVII. **Specimens of Printing** used in the College Drawing Course and Entrance Examinations. 6a.

Note.—The complete Treatise forms the course of the Civil Engineer and Upper Subordinate classes at the Thomason College in Civil Engineering. The other Manuals are the complete course for both Classes in the several subjects of which they treat.

MISCELLANEOUS.

ENGINEERING WORKS.

Curve Tables, complete, for laying any curve. 4a.

Scantlings of Timber for Roofs. Tables and investigation of formulæ for determining size of timbers for Flat Roofs from 8 to 22 feet span, and for Trussed Roofs from 16 to 50 feet span. (2nd edition). By P. Keay, Esq., Head Master. 12a

Notes on Chemistry of Building Materials. R1-8.

Tate's Mechanism. R1.

Barman's Descriptive Mineralogy. R2-4.

* Date of Edition on sale.

† Originally published at R15, reduced to R6.

Useful Rules and Tables relating to Measurement of Timber. Rules for computing the cubic contents of Round Logs, as well as of Sawn Timbers, with Tables, etc. By Rai Kunhya Lal. R2-8.

O'Callaghan's Earthwork Tables for India, in one large sheet, 12a.; mounted on cloth and bound. R1.

Tables for Computing Earthwork in Distributaries and small open Channels, in use in Irrigation Department, N.-W. Provinces. 12a.

Tyndall's Hand-Book of Specifications. (In the Press.)

The Indian Engineer's Pocket Book. R1.

Wooden Bridges and Designs. By Rai Kunhya Lal. (In the Press.)

Blasting under Water (2nd edition). 10a.

Waugh's Instructions for Topographical Surveying) R1.

Analysis of Lime and Cement Stones. By Murray Thomson, Esq., M.D., F.R.S.E. 6a.

Chart, giving by a graphic method the discharges of earthen channels up to 40 feet bed width, very useful for Projects. R1-6.

SCIENCE BOOKS.

Wilson's Inorganic Chemistry. R1-8.

MATHEMATICAL.

Bolleau's Tables of Wages and Rent, and of the value of goods. Tables for converting Seers and Chittacks into decimals of a Maund, and Annas and Pies into decimals of a Rupee. With a few others of general utility (4th edition). R1-8.

Bolleau's Tables of Log sin² ½ P (for computing time 4a.)

Cape's Logarithms, with Tables of Squares, Cubes, etc. R1-4.

Cape's Geometry. R1-4.

Cape's Mechanics. 8a.

Todhunter's Plane Trigonometry. R2-8.

Todhunter's Differential Calculus. R2-8.

Military Topography. 8a.

HINDUSTANI

Elements of Hindustani Grammar. 8a.

Technical Dialogues—English and Urdu. R1.

A Vocabulary of Common and Technical Words in English-Urdu. 12a.

History of India (*Itihas Timirnásak*), Hindi, Parts I and II. Both 6a.

Short Account of Ganges Canal (English and Urdu). Each 4a.

NOTE AND FIELD-BOOKS, etc.

Note-Books (Section paper), large. Each R1-4.

Surveying Field-Books (ruled). 14a.

Levelling Field-Books (English Pattern). R1-4.

„ „ (Canal „). R1-4.

„ „ (College „). R2-0.

P. W. D. Note-Book. R1-4.

„ **Measurement Book.** R1-4.

Circular Card-board Protractors, 12 inches. R2.

MISCELLANEOUS.

Distributary, Velocity and Discharge Table. By Capt. Allan Cunningham. 8a.

Description of Venomous Snakes. (The drawings of all the venomous snakes of Upper India, with description and all important information, extracted from the "Thanatophidia of India.") R1-6.

Ditto ditto in Urdu. R1-4.

Perspective (fully explained). By Col. A. M. Brandreth R.E. R1-12.

Thomason College Calendars for 1892,* 1895,† 1896† and 1897.† Each R2.

Ditto ditto for 1898‡, and 1899† Pt. I, R3-6.

* This does not contain the Entrance Examination papers of the Superior Accounts Branch, Public Works Department.

† These include question papers for entrance to Engineer and Upper Subordinate Classes and Superior Accounts Branch, Public Works Department.

‡ This does not contain the Entrance Examination Papers of the Upper Subordinate Class.

Forms of Accounts, P. W. D., for Sub-Divisional Officers, in English (very old). 4*a*.
Memo. of Instructions for Road Project. R1
Project for College Mess (sample Project). 8*a*.
Ferrotype Printing Processes. 8*a*
Thomason College Library Catalogue. R1-12.
Ditto, Supplement. 1895 to 1899. Each 2*a*.

Irrigation by Rajbahas, } 4*a* each.
Irrigation Tract, No. I.
" " " II.
" " " III.

Land Measuring Chain Statement. Area of kucha and pucka Bighas, sheet. 4*a*.
Report of the Ganges Canal Committee (Major Crofton's Project for remodelling the Ganges Canal according to the views of Major-General Sir Arthur Cotton, R.E., K.C.S.I.), 1800. 8*a*.

Oudh, 21 Plans.
Rajputana, 4 Plans.
British Burma, 19 Plans.
Central Provinces.

A set of Professional papers both loose and quarterly numbers inclusive of Railway freight R10. This is not quite complete.

PROFESSIONAL PAPERS ON INDIAN ENGINEERING.

(FIRST SERIES.)

Vol. I. (Quarterly, Nos. 1 to 5), bound R1-8.
Quarterly, Nos. 1, 2, 3, 4, and 5, } 4*a*. each, inclusive of postage.
Vol. II, Quarterly, Nos. 6 and 7,
" **VI,** " **No. 25,**
" **VII,** " **Nos. 26, 27, 28, and 29,**
Extra No., April 1870.

(SECOND SERIES.)

Quarterly Numbers of Vols. I, II, and IX of the series, 4*a*. each, inclusive of postage.
Quarterly Number 41 A of Vol. X. Each 8*a*.
Cloth covers for Volumes of 1st and 2nd Series, at 8*a*. each.
Index to Professional Papers and loose Papers, 1st and 2nd Series, at 2*a*. **each.**

FERROTYPE PRINTING.

Chemicals and Lithographic Paper for this process can be purchased from Thomason College Book Depôt. Application to be made to the Curator.
Apparatus for Printing can be made up at the Roorkee Workshops, and all particulars obtained from the Superintendent.

CIRCULARS.

Circulars containing the Rules of **admission to the different classes** of the College will be forwarded to applicants.

J. CLIBBORN, *Lieut.-Col., I.S.C.*,
Principal, Thomason Civil Engineering College, Roorkee.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.
The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.
In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1876:—

Terms of subscription payable annually in advance.

For the Complete Series, *including postage* . . . R22-8

	Without postage.	With postage.
	R a. p.	R a. p.
For the Calcutta Series	10 0 0	12 8 0
" each of the Madras, Bombay, and Allahabad Series	6 0 0	7 0 0
" a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...	2 0 0
" a part of each of the Madras, Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	...	1 0 0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit:—

	For town.	For mofussil.
	R a. p.	R a. p.
For the Calcutta Series; per copy . .	0 8 9	0 10 0
" each of the Madras, Bombay, and Allahabad Series; per copy . . .	0 5 3	0 5 9
" the Calcutta Series. For the year . .	7 2 6	8 6 3
" each of the Madras, Bombay, and Allahabad Series. For the year . .	4 4 6	4 11 0

Persons desiring to subscribe for, or purchase, the Report should apply to—
Superintendent, Government Press, Madras.
The Superintendent, Government Central Press, Bombay.
The Curator of Government Books, North-Western Provinces and Oudh.
The Officer in charge, Bengal Secretariat Book Depôt.
Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrapped of the Indian Law Reports, Calcutta Series, at the following rates payable in advance:—

	One page.	Half page.	Quarter page.
For one issue	R 20	R 14	R 9
" three issues	" 55	" 36	" 24
" six "	" 100	" 68	" 45
" nine "	" 145	" 96	" 64
" twelve "	" 180	" 120	" 80

Several volumes of the BENGAL LAW REPORTS, from August 1868 to December 1875, and FULL BENCH RULINGS. Parts I and II, are available at the following rates:—

	Without postage.	With postage.
	R a. p.	R a. p.
Bengal Law Reports, for one year . .	20 0 0	22 8 0
Single copies, R2 per copy.		
Full Bench Rulings, Parts I and II . .	20 0 0	22 8 3

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta, Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription R22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calender year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

GEOLOGICAL SURVEY OF INDIA.

Apply to the Registrar, Geological Survey of India, Calcutta.

PURE SULPHATE OF QUININE.

Manufactured at the Bengal Government Cinchona Plantation.

From 1st April, 1898, the price of this Quinine will be as follows :—

1-pound tin,	R17,	or, post-free,	R17-12.
½	„	R8-8,	„	R9-0.
¼	„	R4-4,	„	R4-12.

Analysis shows this Quinine to be of the purest manufacture ; and it is guaranteed to be free from wilful mixture with the inferior alkaloids, Cinchonine and Cinchonidine. It is for sale only to Government officers, and only for cash, and may be had from the Superintendent, Botanic Garden, Seebpore, near Calcutta.

বঙ্গদেশের গবর্ণমেণ্টের সিন্‌কোনা আবাদে প্রস্তুত বিশুদ্ধ কুইনাইন।

১৮৯৮ সালের ১লা এপ্রেল হইতে এই কুইনাইনের নিম্নলিখিত মূল্য হইবে, যথা—

১ এক পৌণ্ড টিন	১৭৲ বা ডাকমাশুল বিনা	১৭৸৹
৷ আধ „ „	৮৷৹	„	৯৲
৷ পিকি „ „ ৷	৪৷৹	„	৪৸৹

পরীক্ষা করিয়া দেখা গিয়াছে যে এই কুইনাইন অতি বিশুদ্ধ রূপে প্রস্তুত করা হইয়াছে, এবং ইহা যে সিন্‌কোনাইন ও সিন্‌কোনিডাইন নামক অপকৃষ্ট ক্ষারের সহিত ইচ্ছা পূর্ব্বক মিশান হয় নাই তাহার গারাণ্টী দেওয়া যাইতেছে। ইহা নগদ মূল্যে কেবল গবর্ণমেণ্টের কর্ম্মচারীগনের নিকট বিক্রয় করা যাইবে, এবং কলিকাতার নিকট শিবপুরের কোম্পানির বাগানের সুপারিণ্টেণ্ডেণ্টের নিকট পাওয়া যাইতে পারে।

* *Agent for sale of the Legislative Department publications.*

NOTICE.—Books and Acts required for private use only can be purchased.—Applications should be accompanied by a remittance, unless it is wished that the books should be sent by value-payable post, in which case, besides the ordinary postage, an additional charge is made for registration and commission.

Books and Acts required for the public service should be obtained through Local Governments to whom the applicant is subordinate.

Applications for Government publications which are no longer in print should be made to the Agents of the particular Government under whose orders they were originally issued.

The amounts within parentheses are for packing and postage.

Cattle Disease in India. Manual of the more deadly forms of. Hindi ersion. Royal 8vo., stiff boards. 6a.
Ditto. Urdu version. Royal 8vo., stiff boards. 6a.

A Dictionary of the Economic Products of India,

BY DR. GEO. WATT, C.I.E.

Reporter on Economic Products.

The first five volumes and Volume VI, Parts I, II, III & IV of the Dictionary are ready at the Office of the Superintendent of Government Printing, No. 8, Hastings Street, Calcutta, and will be supplied to non-subscribers on receipt of the price for the complete set, which is R45 in India, and 3 guineas in England (exclusive of the Index, for which a separate charge will be made): packing and postage, in India, 8 annas per volume; for England, 2 rupees 6 annas per volume. For copies bound in half calf or half morocco, R6 and 8 shillings, respectively, will be charged extra for the whole set.

The Dictionary is intended to deal with the products of India—animal, vegetable, and mineral; each product being treated after a uniform plan, the paragraphs of which give the scientific, vernacular, and European names; habitat or source; history; properties and uses (both chemical and industrial); trade statistics; markets, etc. The work is arranged alphabetically according to scientific nomenclature, but commercial and important vernacular names are also given as cross-references, so that little difficulty need be experienced in finding the account of a product even when its scientific name is unknown to the reader.

An important feature of the Dictionary consists in the fact that derived information is in every instance given under quotation marks, and with a reference to the original publication. Numerous contributors have, however, furnished the results of new discoveries, and confirmed the vernacular names, so that the Dictionary is not only a complete compilation of published information, but has been brought abreast of the most recent inventions and discoveries.

Volume I contains the letters A and B, and consists of 559 royal 8vo pages; Volume II embraces the letter C in 689 pages; Volume III contains the letters D, E, F, and half of G; Volume IV, latter half of G to middle of L; and Volume V contains the latter half of L to end of O; Vol. VI (which consists of four parts), Part I, contains letters P to R. The whole work completed in nine volumes (including Parts II to IV of Vol. VI), but a tenth volume has been issued, consisting of an Index to all the vernacular and other names contained in the Dictionary. The index is practically a glossary of the vernacular and European names of the plants, animals, and minerals of India, and, as such, is a work of reference, which, it is hoped, will prove of considerable value.

Index to Do. do. 8vo. R2 (4a.)

NOTE.—By January next 100 sets only of the Dictionary would be available for sale.

Technical Art Series published up to 1896, together with their explanatory Text—

1886-87, 6 Plates with Text. R1-8 a set (4a.)

Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE INDIAN COUNCILS ACTS, 1861 AND 1892 (24 & 25 VICT., CAP. 67, AND 55 & 56 VICT., CAP. 14).

The Council met at Government House, Calcutta, on Friday, the 2nd March 1900.

PRESENT:

His Excellency Baron Curzon of Kedleston, P.C., G.M.S.I., G.M.I.E., Viceroy and Governor General of India, *presiding*.
His Honour Sir John Woodburn, K.C.S.I., Lieutenant-Governor of Bengal.
The Hon'ble Major-General Sir E. H. H. Collen, K.C.I.E., C.B.
The Hon'ble Sir A. C. Trevor, K.C.S.I.
The Hon'ble Mr. C. E. Dawkins.
The Hon'ble Mr. T. Raleigh.
The Hon'ble Mr. Denzil Ibbetson, C.S.I.
The Hon'ble Mr. P. M. Mehta, C.I.E.
The Hon'ble Nawab Mumtaz-ud-daula Muhammad Faiyaz Ali Khan.
The Hon'ble Mr. J. K. Spence, C.S.I.
The Hon'ble Mr. G. Toynbee.
The Hon'ble Mr. D. M. Smeaton, C.S.I.
The Hon'ble Mr. J. D. Rees, C.I.E.
The Hon'ble Maharaja Rameshwara Singh Bahadur of Darbhanga.
The Hon'ble M. R. Ry. Panappakkam Ananda Charlu, Vidia Vinodha Avargal, Rai Bahadur, C.I.E.
The Hon'ble Kunwar Sir Harnam Singh Ahluwalia, K.C.I.E., of Kapurthala.
The Hon'ble Mr. H. F. Evans, C.S.I.
The Hon'ble Rai Bahadur B. K. Bose, C.I.E.
The Hon'ble Mr. Allan Arthur.

QUESTIONS AND ANSWER.

The Hon'ble RAI BAHADUR ANANDA CHARLU asked:—

"1. Will the Government be pleased to state whether, apart from what is

supplied by Reuter's Agency to the Government and the newspapers alike, the Government obtains any foreign telegraphic messages of like import, either regularly or otherwise? If so, will the Government be pleased to state the source, means, machinery or agency (if any) from which such messages are obtained and the annual amount of cost incurred by the Government in that behalf (if any)?

"2. Will the Government be pleased to state if any and what objection exists to preclude the Government from publishing, as official communiqués, the substance of such foreign telegraphic messages, in so far as they do not involve matters which the Government find it expedient to treat as confidential?"

The Hon'ble MR. DENZIL IBBETSON replied:—

"The answer to the first part of the first question, *viz.*, whether the Government obtains, either regularly or otherwise, any foreign telegraphic messages apart from, and of like import to, those supplied by Reuter's agency to the Government and the newspapers alike, is in the negative. In these circumstances the second part of the first question and the second question require no answer."

INDIAN MINES BILL.

The Hon'ble MR. IBBETSON presented the Report of the Select Committee on the Bill to provide for the Regulation and Inspection of Mines. He said:—"We have made material and important alterations in the Bill as introduced, and we recommend that the Bill, as now revised, be republished."

TELEGRAPHIC PRESS MESSAGES BILL.

The Hon'ble MR. IBBETSON asked leave to postpone his motion that the Report of the Select Committee on the Bill to provide for the protection of certain telegraphic press messages be taken into consideration. He said:—"My Lord, since that motion was placed upon the notice-paper, we have received a memorial signed by the representatives of no fewer than nine newspapers in different parts of India, and of Reuter's Telegram Company, asking for a material alteration in the lines on which the Bill, as revised by the Select Committee, is framed. This memorial reached me only on Tuesday evening, and probably reached some Hon'ble Members still later. Moreover, notice of twelve amendments has been given, five of them affecting a single section of the Bill, of which, while some conflict because they propose to attain conflicting objects, others conflict because they propose to attain the same object in different ways.

"Under these circumstances, it is desirable that further time should be given for consideration. The decision of the Select Committee on the Mines Bill to recommend that the Bill be republished, sets free a day which it would otherwise have been necessary to reserve for the consideration of their Report, and thus renders a postponement possible. And I think it will be more convenient, both to Hon'ble Members and to the Government, that the consideration of the Telegraphic Press Messages Bill should be deferred till the next meeting of Council at which Your Excellency will preside."

Leave was granted.

His Excellency THE PRESIDENT said:—"The Council will adjourn till next Friday, the 9th March, and the meeting to which the Hon'ble Member has alluded the next meeting at which I shall have the opportunity of taking the chair—will be held on Friday, March 16th."

The Council adjourned accordingly to Friday, the 9th March, 1900.

J. M. MACPHERSON,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 2nd March, 1900.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, February 17th, 1900.

Light snow and rain have fallen during the week in Baluchistan and the North-West Himalayas and light rain in the Punjab and the western submontane districts of the North-Western Provinces. Thunderstorms have given light to moderate showers to Assam, Bengal and Orissa.

The depression in the Punjab at the close of the previous week advanced into the South-East Punjab by Sunday morning and had partly filled up. Light to moderate rain and snow had fallen in Baluchistan and the North-West Himalayas and light rain over the Punjab. The largest amounts reported were Chakrata 1·03 inches, Chaman ·80 inch, Mussooree, Simla and Rawalpindi about half an inch. Rain and snow continued falling in small quantities in the North-West Himalayas during the next 24 hours and light rain in the submontane districts. A large area of low pressure was shown lying over the North-Western Provinces, the east of Central India, the eastern and central districts of the Central Provinces, Orissa and the North Madras Coast on Sunday, which extended into Bihar and Bengal on Monday, and by giving southerly winds at the north-west angle of the Bay was the cause of thunderstorms in Lower Bengal, Assam and Orissa. Berhampore, Mymensingh and Burdwan received amounts ranging from three-quarters to one inch of rain. The low pressure area in North-East India had nearly filled up by Tuesday morning, but thunderstorms, in some cases accompanied with hail, continued in the same area on Tuesday and Wednesday. Jessore reported a fall of 1·20 inches, Balasore ·95 inch and Narayanganj ·69 inch. Pressure recovered briskly to rapidly in Bengal, Assam

and Upper Burma on Thursday; and, winds returning to northerly directions at the head of the Bay, no more thunderstorms were reported from North-East India on the remaining days of the week.

A shallow depression in the Persian Gulf gave light showers to Jask, Bushire and Teheran on Thursday and advancing eastwards entered Sind on Friday morning. Weather was again slightly unsettled in Baluchistan, the North-West Himalayas and the submontane districts, and light snow and rain fell in these areas on Friday and Saturday. The largest amounts reported on these days were Cherat 1·23 inches, Chaman ·70 inch, Quetta ·57 inch, Murree ·55 inch and Peshawar ·44 inch. By Saturday morning the depression had advanced eastwards, with apparently two centres, one near Sirsa in the South Punjab and the other between Jhansi and Sambhar.

Daily Summary.—*Sunday, February 11th.*—Pressure had risen rapidly in Baluchistan and slightly to briskly in the Punjab and Gujarat and had fallen slightly to briskly in the east of Central India and the adjacent districts. The depression in Upper Sind on Saturday had moved in an easterly direction into the South-East Punjab and a large area of low pressure was lying over the North-Western Provinces, the east of Central India, the eastern and central districts of the Central Provinces, Orissa and the North Madras Coast. Light to moderate rain and snow had fallen in Baluchistan and the North-West Himalayas and light rain in the Punjab. Mean temperature was above the normal in all provinces, but the excess was slight in the Punjab, the West Coast and Burma. It was very large in the Central Provinces, Berar and Chota Nagpur.

Monday, February 12th.—The barometer had fallen briskly to rapidly along the hills in the North-Western Provinces, in Bihar, Bengal, Assam, Orissa, the North Madras Coast and Upper and Central Burma. The depression in the Central Provinces had moved in an easterly direction and a low pressure area covered the greater part of the North-Western Provinces, Bengal, Bihar, Orissa and Ganjam. Light rain and snow had fallen in the North-West Himalayas and light rain in the submontane districts. Thunderstorms had given light to moderate rain in Assam, Lower Bengal and Orissa. Mean temperature continued in excess in all provinces, except the Punjab, Gujarat and the West Coast, where it was normal. The excess averaged 10° in Chota Nagpur and from 6° to 7° in Bengal, Orissa and the Madras Deccan.

Tuesday, February 13th.—Pressure had risen slightly to briskly in North-West India and Bengal. Shallow low pressure areas were shown lying over North Bengal and Central Burma. A few thunderstorms, in some cases accompanied by hail, had given light showers in the North-West Himalayas and Assam. Temperature had fallen in most provinces and mean temperature was in slight defect in Gujarat and normal in the Punjab, Sind, Berar, the Bombay Deccan and the West Coast. It was from 6° to 8° in excess in Bengal, Orissa, Chota Nagpur and the Madras Deccan.

Wednesday, February, 14th.—Pressure had fallen slightly in Bengal, Assam and Upper Burma and had risen slightly to briskly in North-West and Central India. Thunder and hailstorms were reported from Orissa, Lower Bengal and Assam. Mean temparature was in slight defect in Gujarat and the West Coast and normal in the Punjab, Berar, the Bombay Deccan and the West Coast. The excess in the remaining provinces was largest (averaging 5½°) in Assam, Bengal, Orissa, Chota Nagpur and the Madras Deccan.

Thursday, February, 15th.—The barometer had fallen slightly to rapidly in Baluchistan, North-West India and the Central Provinces and had risen briskly to rapidly in Bengal, Assam and Upper Burma. No rain had been reported except a few drops at Chaman. Temperature had fallen rapidly in North-East India, Orissa and the Madras Deccan. The mean of the day and night temperatures was normal in Bihar, the Punjab, Rajputana, Gujarat, Central India and the West Coast. The excess in the remaining provinces was not large and ranged from only 3° to 3½° in the provinces where it was most strongly marked.

Friday, February, 16th.—Pressure had fallen except along the hills in the North-Western Provinces where it had been steady. The fall had been brisk to rapid in Baluchistan, the Punjab, Sind, Rajputana and Gujarat and a depression was entering Sind, the deficiency of pressure at Jacobabad amounting to slightly over two-tenths of an inch. Light rain had fallen in Baluchistan and the North-West Punjab and light snow in Kashmir. The variations of the mean temperature from the normal were not large, except in parts of Berar and the Central Provinces where mean temperature was from 5° to 6° in excess.

Saturday, February 17th.—Pressure had risen briskly in Baluchistan and Upper Sind and had given way briskly to rapidly in the South-East Punjab, Rajputana, the North-Western Provinces, Central India and the adjoining districts of the Central Provinces. The depression in Sind had advanced in an easterly direction. It was apparently a double depression with two distinct cyclonic circulations, one centre being near Sirsa in the South Punjab and the other between Jhansi and Sambhar. Light to moderate rain and snow had fallen in the North-West Himalayas and light rain in the submontane districts. Mean temparature was in excess, except in Assam, Bihar, the Punjab and the West and Madras Coasts, where it was normal. The excess in Rajputana and Berar averaged 6½°.

Temperature.—Temperature has been above the normal over the greater part of the Indian region, but the excess was not so marked at the close of the week as it was on Sunday. The mean temperature of the whole week was in excess in all provinces, except the Punjab, Gujarat and the West Coast, where it was practically normal. The largest variations from the normal occurred in Chota Nagpur (+5°·7), Orissa (+5°), the Madras Deccan (+4°·8), the Central Provinces (+4°·6) and Bengal (+4°·3). The excess ranged from 3° to 4° in Rajputana, Central India, Berar and Mysore; and from 2° to 3° in Burma, Assam, Bihar, the North-Western Provinces, Sind, the Bombay Deccan and South India.

The following table gives mean temperature variation data of the week :—

Province.	Variation from normal of mean temperature of 24 hours preceding 8 A.M. of							Mean variation of week.
	11th.	12th.	13th.	14th.	15th.	16th.	17th.	
	°	°	°	°	°	°	°	°
Burma	+1·7	+1·1	+3·4	+2·9	+3·4	+1·4	+1·0	+2·1

Bihar	+4·5	+4·9	+5·4	+3·5	+0·6	−0·8	−0·2	+2·6
Chota Nagpur	+8·4	+9·9	+7·2	+5·4	+2·1	+3·1	+3·8	+5·7
N.-W. P. and Oudh	+5·6	+5·2	+3·9	+0·9	+1·1	−0·2	+3·3	+2·8
Punjab	+1·5	−0·2	−0·5	−0·7	−0·2	+3·3	+0·8	+0·6
Sind	+4·5	+2·0	−0·4	+1·7	+1·2	+3·5	+3·6	+2·3
Rajputana	+6·3	+3·5	+2·7	+1·2	+0·9	+2·3	+6·6	+3·4
Gujarat	+4·0	−0·4	−1·5	−2·0	+0·6	+0·8	+3·5	+0·7
Central India	+7·8	+4·5	+3·2	+1·3	+0·2	+1·0	+4·6	+3·2
Central Provinces	+9·4	+4·7	+3·6	+2·7	+3·1	+3·7	+5·2	+4·6
Berar	+8·9	+2·5	+0·7	+0·9	+3·0	+4·5	+6·4	+3·8
West Coast	+1·7	+0·8	−0·7	−1·3	−0·5	−1·0	−0·3	−0·2
Bombay Deccan	+5·8	+1·9	+0·4	−0·6	+1·7	+2·7	+2·8	+2·1
Mysore	+4·1	+4·7	+3·6	+2·9	+2·0	+2·1	+2·8	+3·2
Madras Coast	+2·4	+1·8	+3·3	+1·8	+2·2	+1·4	−0·2	+1·8
Madras Deccan	+6·4	+5·8	+5·8	+5·5	+3·4	+3·1	+3·4	+4·8
South India	+3·3	+1·9	+2·1	+0·6	+2·1	+3·1	+3·2	+2·3
Mean for whole of India	+5·1	+3·6	+3·0	+2·2	+1·7	+1·9	+2·8	+2·9

The mean temperature for the whole of India was 5° in excess on Sunday, but temperature decreased during the week and on Thursday and Friday the

excess was below 2°. For the whole week the variation from the normal amounted to +2°·9.

Rain.—Showers have been received during the week in Assam, Eastern, Deltaic and Central Bengal, Orissa, Chota Nagpur, the West, West Submontane and Hills divisions of the North-Western Provinces, the Punjab and Baluchistan, but the amounts received have been equal to or in excess of the normal only in Eastern and Deltaic Bengal, the Surma and Hills divisions of Assam, Orissa, the South, Central, North and Hills divisions of the Punjab, and in Baluchistan. The Punjab Hills is the only division in which the average rainfall of the week exceeded an inch.

The last three columns of the table at the end show that the rainfall of the period December 31st to February 17th was practically normal or in excess in Central Bengal, Chota Nagpur, Bihar, the North-Western Provinces (with the exception of the West division), the North, Submontane and Hills divisions of the Punjab, the Central and East divisions of the Central Provinces, the Baluchistan Hills, Central India (East), South Central Madras and Mysore.

The following gives the largest amounts received at individual stations during the week. Agartola in Hill Tippera has received heavy rain:—

East Bengal—Agartola (Tippera)	7·91 inches.
Assam (Hill Tracts)—Cherra Poonjee	2·05 „
Punjab—Abbottabad (Hazara)	2·38 „

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 24th February.*—No rain fell except a few light showers in parts of the Circars and in Tinnevelly. Water is growing scarcer and is inadequate for irrigation supplies; for drinking purposes it is scanty in parts of Nellore and the Deccan. Cultivation is confined to small areas under irrigation, though some preparation for the next season is proceeding in parts. Most of the crops have been harvested: what stands will deteriorate unless adequately watered. Harvests are yielding an indifferent outturn. Pasturage has dried up generally but fodder is available for cattle and their condition is normal. Prices are almost stationary but slightly dearer in the southern districts. The test works opened in Cuddapah employed 1,097 men, 1,887 women, and 728 children; total 3,712. Advances to weavers gave employment to 1,464 men, 1,126 women. The total number of workers was 6,302.

Bombay.—*For week ending 26th February.*—Very slight rain fell during the week in three districts of Sindh. The standing spring crops are in good condition in the Konkan and Karachi and in the irrigated lands in Baroda, in three districts of Gujarat, and in three of the Deccan. Spring crops have withered in Nasik and Dharwar and in parts of Poona and they have been damaged by frost and high winds in Shikarpur and by frost in the other districts of Sindh. Reaping of remnants of spring crops has been completed in Belgaum and Satara and is in progress in the other districts of the Karnatak and the Deccan. Fodder supply is scanty in parts of Sindh, the Deccan and the Karnatak. Cattle are suffering severely owing to insufficiency of fodder in Rajkot and Baroda, in three districts of Gujarat and in parts of four districts of the Deccan. Prices have fallen in two districts, risen in seven districts and are stationary elsewhere.

The daily average number on relief are as follows:—For week ending 24th instant.—British districts—On test works, 4,588; on relief works, 836,459; dependants, 238,054; total on works, 1,079,101. In poor-houses, 18,119; on village relief, 55,920; total on gratuitous relief, 74,039. Native States—On relief works, 340,048; dependants, 56,238; total on works, 396,286. In poor-houses, 27,561; on village relief, 6,908; total on gratuitous relief, 34,469. Grand total on relief, 1,584,895.

Bengal.—*For week ending 26th February.*—Rain fell in varying quantities in different parts of the Province during the week. It has done good in facilitating preparations for the autumn crops, which are in progress. The standing spring crops are in good condition, but some damage from hail are reported from Hooghly and Purnea. Sugarcane and early spring crops are being harvested, and poppy is being lanced and opium collected. No change of importance in the price of rice is reported except that it has slightly fallen in the districts of Hazaribagh, Ranchi, Palamau and Puri, where scarcity is apprehended. No want of fodder is reported anywhere.

North-Western Provinces and Oudh.—*For week ending 28th February.*—More rain fell in the Himalayan and western submontane districts, the heaviest falls having occurred in Dehra Dun, Garhwal and Bijnor. Muzaffarnagar, Pilibhit, Ghazipur, Mirzapur and Jhansi also received slight showers. Spring crops are generally in good condition and are maturing, and harvesting operations are in full swing in many districts. Preparation and sowing of land for extra spring crops and sugarcane are in progress and ploughings for autumn

crops continue in places. Some spring crops have been again slightly damaged by hail in Ballia. The collection of opium is in progress. Supplies and fodder are available, and the latter is less expensive in the Jhansi district, is slightly deficient in Cawnpore and is sufficient but dear in Etah and Meerut. Prices are generally stationary or indicate a slight fall. There were 2,227 persons on four relief works in the Jhansi district and 324 persons on gratuitous relief. The number of persons receiving relief in poor-houses was—Jhansi, 109; Mahroni, 32; Muttra, 193; and Agra, 15; of whom three were immigrants.

Punjab.—*For week ending 28th February.*—Rain fell more or less in all districts except Hissar, Rohtak, Gurgaon and Delhi. Ploughings and sowings of extra spring crops as well as of sugarcane and cotton are in progress. Standing crops are being irrigated in Jullundur, Lahore and Sialkot. The prospects of standing irrigated crops are good to fair in Hissar, Karnal, Amritsar, Gujrat, Peshawar and Bannu; average to below average in Gurgaon, Ferozepore, Multan, Lahore, Rawalpindi and Dera Ismail Khan. The condition of crops has been improved by recent rain in Sialkot and Dera Ismail Khan; but more rain is urgently wanted throughout the Province. Dry land crops are generally in bad condition owing to failure of winter rains. The water supply in the Kalapani stream in the Dera Ismail Khan district is running short. The crops irrigated by brackish wells in Rohtak and Gurgaon are suffering. Rape, barley and gram crops are being damaged by caterpillars in parts of Ferozepore. Cattle are said to be in fair condition in Karnal, good in Peshawar and poor elsewhere; their condition is improving in Sialkot. Cattle are dying of starvation in Rohtak, Shahpur, Jhelum and Dera Ismail Khan. Fodder is said to be scarce in all districts, and this scarcity is keenly felt especially in the unirrigated tracts. Green fodder is now obtainable in Sialkot. The price of wheat is rising in Gurgaon, Jullundur, Sialkot, Shahpur, and Bannu and is falling in Hissar, Delhi, Karnal, Lahore, Gujrat, Peshawar and Dera Ismail Khan. The price remains unchanged elsewhere. The price of gram is rising in one and falling in four districts and that of maize is rising in four and falling in three districts. Wheat is selling from 10 to 13; gram 11 to 13¾; barley 12 to 13; great millet 10¾ to 14; bulrush millet 9¾ to 12; and maize 11$\frac{5}{16}$ to 14 seers per rupee. Rice is selling from 9 to 10 seers in the Sialkot district. The average number on relief was as follows:—British districts.—Relief workers, 124,190; dependants, 43,095; test workers, 27,405. In poor-houses, 4,050; otherwise relieved, 19,771. In Native States—Relief workers, 2,861; gratuitously relieved, 3,285; no report has been received from Shahpur, nor from two works in Gurgaon and one in Karnal.

Burma.—*For week ending 24th February.*—In Lower Burma threshing operations are almost completed and the outturn of the crop is expected to be good. In Upper Burma the reaping of paddy continues only in Myingyan. The reaping of *juar* is completed in Lower Chindwin. The transplanting of dry weather paddy continues. The plucking of cotton is in progress in Thayetmyo. The crops on the islands are doing well except in the Shwebo township. Shwebo rust has attacked the wheat crop in Minbu. The price of paddy has fallen in Pakokku and Mandalay and has risen in three districts in Lower Burma: elsewhere it remains unchanged.

Central Provinces.—*For week ending 24th February.*—The weather has been occasionally cloudy, the days are warm, and the nights and mornings cool. Rain, accompanied in places with hail, fell in ten districts; the falls were 2¼ inches in Bhandara, 1¼ inches in the Sannsar tahsil of Chhindwara, one inch in Balaghat, half an inch in Raipur and Nagpur and from a quarter of an inch to a few cents in Seoni, Bilaspur, Wardha and Saugor. Damage through hail is reported in Bhandara. The recent rain has been detrimental to the harvested crops standing on the threshing floor, but has slightly benefited the standing ringni (cold weather) *juar*. Slight damage to *mahua* through cloudy weather is reported from Balaghat. Harvesting of spring crops continues

and is almost completed in Nagpur, Chanda and Raipur. The pressing of sugarcane continues in Betul. Preparation of land for autumn sowings is in progress in Nagpur, Mandla and Nimar. Fodder and water are generally scarce. Prices are steady in Narsinghpur, Nimar, Betul, Nagpur, Bhandara, Bilaspur and Sambalpur; have slightly fallen in Saugor, Damoh, Jubbulpore and Mandla; elsewhere there are local fluctuations. The cheapest prices are :—wheat, 12; gram, 16; rice, $11\frac{7}{8}$; and juar, 13 seers per rupee. The dearest prices are :—wheat, 8; gram, $9\frac{1}{2}$; rice, 8; and juar, 9 seers per rupee. Harvest operations continue to draw labourers off relief works except in the Nimar, Chhindwara, Bhandara, Balaghat and Bilaspur districts, where the numbers on famine relief have increased; but over the province there is a net decrease of 16,021, of which the northern wheat districts account for about 13,000. There are 146 Public Works Department relief camps now open. The numbers on relief at the end of the week were as follows :—Relief workers—Public Works Department—adults, 559,265; children, 88,623; village works, 281,799; grass cutting works, 26,240; weaver relief, 24,243; total 980,170. Gratuitous relief :—Dependants—adults, 4,057; children, 111,853; poor-houses—adults, 270; children, 114; kitchens—adults, 19,602; children, 166,821. Otherwise relieved :—adults, 97,325; children, 21,650. Total on gratuitous relief, 421,692. Total on all forms of relief, 1,401,862. Feudatory States :—Relief workers, 23,302; gratuitous relief, 11,586; total, 34,888; or 16,000 more than last week. The returns relate to ten States only.

Assam.—*For week ending 27th February.*—The weather is seasonable. Land is being prepared for early rice in parts of the Assam Valley and for low land winter rice in Sylhet. The pruning of tea, pressing of sugarcane and gathering of mustard and pulses are in progress. The outturn of mustard is generally good and the prospects of sugarcane good in Sylhet and Lakhimpur and elsewhere indifferent. Prices :—Common rice—Sylhet, $19\frac{1}{4}$; Dhubri, 16; Tezpur and Gauhati, 18; Nowgong, 20; Sibsagar, 13; and Dibrugarh, 12 seers per rupee.

Mysore and Coorg.—*For week ending 27th February.*—MYSORE: The standing crops are withering in parts for want of rain. Prices have fallen in Bangalore, Hassan and Shimoga. Ragi has been harvested in Bangalore, Tumkur and Kadur. Water and fodder are reported to be scarce in parts of Bangalore, Tumkur, Hassan, Chitraldrug and Shimoga.

COORG: The harvesting of rice is completed and ragi threshing has commenced. The prices of food-grains are rising. Water and fodder for cattle are sufficient.

Berar and Hyderabad.—*For week ending 24th February.*—BERAR: Thirty cents of rain fell in the Amraoti district. The days are warm and nights cool. Wheat and gram sown on well lands in the Akola, Jalgaon and Malkapur taluqs are in good condition and those in the Ellichpur taluq are doing fairly well. Harvesting of wheat has been commenced in the Akola taluq. Land is being prepared for the ensuing crop in parts of four districts. Fodder and water are inadequate to meet the wants. Prices :—Akola, $5\frac{1}{2}$; Amraoti, 10; Basim, 9; Buldana, 9; Ellichpur, 9; Wun, $10\frac{3}{4}$ seers per rupee. The number of persons employed on relief works was 262,454; dependants, 37,345; occupants of poor-houses, 4,065; in receipt of village doles, 5,106; grand total, 308,970. Complete information has not been received from the Deputy Commissioner of Basim.

HYDERABAD: *For week ending 24th February.*—No rain has fallen during the week. The total rainfall from 1st January is 13 cents. The small portion of the spring crop saved from the heavy drought is being harvested. The winter rice crop sown under wells badly needs rain. Agricultural prospects are very gloomy. Cattle are fairing badly for want of pasture. The water supply is daily decreasing. Prices of grain have risen slightly. The total number of

persons employed on relief works, including dependants, was 133,245, and gratuitously relieved, 10,342. They are:—Wheat, $5\frac{3}{4}$; coarse rice, $3\frac{3}{8}$; and *juar* $9\frac{1}{2}$ seers per current sicca rupee.

Rajputana.—*For week ending 21st February.*—No rain has fallen. The condition of standing crops is unchanged. Prices are rising in 7 States, falling in 6, and are steady elsewhere. The numbers employed on relief works were as follows:—Marwar, 104,952; Mewar, 77,548; Jhalawar, 2,351; Kotah, 17,992; Tonk, 4,125; Bundi, 5,308; Shahpura, 2,248; Ajmer, 23,574; Merwara, 60,370; Jaipur, 32,994; Kishangarh, 5,988; Alwar, 8,359; Bikanir, 35,767; Jaisalmer, 1,483. On gratuitous relief:—Marwar, 25,327; Mewar, 18,153; Jhalawar, 2,127; Kotah, 2,800; Tonk, 744; Bundi, 845; Shahpura, 1,105; Ajmer, 4,160; Merwara, 15,635; Jaipur, 32,012; Kishangarh, 2,979; Alwar, 1,281; Bikanir, 2,522; Jaisalmer, 142. Besides these, 191 persons in Ajmer and 8,922 in Marwar are returned as being relieved by private charity. Total for all Rajputana, excluding figures for Sirohi and Bharatpur, not received, are:—Relief works, 383,059 and gratuitous and charitable relief 118,945 against 395,536 and 100,130 respectively for the previous week. Explanation has been called for of Jodhpur and Jaipur figures. Prices:—Marwar, $9\frac{1}{8}$; Mewar, $8\frac{5}{16}$; Jhalawar, $8\frac{13}{16}$; Kotah, $8\frac{3}{16}$; Tonk, $8\frac{7}{8}$; Bundi, $8\frac{1}{4}$; Shahpura, $9\frac{1}{2}$; Ajmer, $10\frac{1}{4}$; Merwara, $10\frac{3}{4}$; Jaipur, $13\frac{5}{8}$; Kishangarh, $12\frac{1}{2}$; Alwar, $11\frac{1}{4}$; Bikanir, $9\frac{1}{2}$; and Jaisalmer, $8\frac{1}{4}$ seers per rupee. The number of deaths from starvation reported are:—Bundi, 40; Tonk, 77; and Shahpura, 13.

. **Central India.**—*For week ending 21st February.*—No rain has fallen. Agricultural operations are in progress everywhere. The condition of the standing crops is indifferent in Gwalior, fair in Bhopal and Malwa and from average to good in Bundelkhand and Baghelkhand. The crops have been slightly damaged in parts of Bundelkhand and Baghelkhand from frost or hailstorm, and greatly damaged in Indore. Fodder is good in Bhopal, Bundelkhand and Baghelkhand and bad in Gwalior, Bhopawar and Indore. Prices are steady in Gwalior, Baghelkhand and Bhopawar, above normal in Bundelkhand, and rising in Bhopal and Malwa. The average prices of the staple food-grain in seers per rupee are:—Gwalior, 12; Bhopal, $10\frac{1}{2}$; Bundelkhand, $13\frac{1}{4}$; Baghelkhand, 9; Malwa, $9\frac{5}{8}$; and Indore, 8. Number on relief works—Gwalior, 2,037; Bhopal, 11,432; Bundelkhand, 4,620; Baghelkhand, 5,822; Malwa, 13,851; Bhopawar, 47,466; Indore, 6,775. On test works:—Gwalior, 681. On gratuitous relief:—Bhopal, 654; Bundelkhand, 1,988; Baghelkhand, 416; Malwa, 4,266; Bhopawar, 5,047; and Indore, 6,147.

Baroda.—*For week ending 17th February.*—There is no change in the agricultural prospects. The condition of agricultural stocks is not satisfactory for want of fodder. Prices:—bajra, 17; juar, 19; wheat, 17; rice, superior, 13, inferior, 17 pounds of 40 tolas per British rupee. The daily average number of persons employed on relief works in Baroda territory was 52,165; and the number on gratuitous relief 11,328.

Kashmir.—*For week ending 27th February.*—Fair rain has fallen since last report. The weather is fine. Prices continue below normal. The price of rice is 27 seers the rupee.

JAMMU.—*For week ending 28th February.*—Slight rain has fallen. The condition of standing crops is fair. Fodder is scarce. Prices are stationary; wheat is selling from $9\frac{1}{2}$ to 16, and maize from 12 to 20 seers per rupee.

Nepal.—*For week ending 24th February.*—The rainfall was 0·56 of an inch, with snow and hail on the higher peaks about Katmandu. The weather is cold. The standing crops are progressing favourably. The price of rice is 9 seers per rupee.

The number of persons in receipt of relief during the preceding and present weeks in each Province is shown in the following table:—

§ Figures for Sirohi and Bharatpur not received.

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from returns obtained from Local Governments and Political Officers, and give the District details of the Provincial totals published weekly in the Crop and Weather Summary of the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons gratuitously relieved in poor-houses or at their homes.

The dates at the head of the table are the dates of the *Gazette of India* in which the Provincial totals were published. The figures, however, actually show the numbers on relief in each preceding week.

No.	Name of Province and District.	Population.	For the week ending the 3rd February 1900.			For the week ending the 10th February 1900.			For the week ending the 17th February 1900.			For the week ending the 24th February 1900.

No. 1053 S. R., dated Calcutta, the 28th February 1900.

READ—

Customs Circular No. IV of 1900.

ORDERED, that the circular be published for general information in the Supplement to the *Gazette of India*.

J. F. FINLAY,

Secretary to the Government of India.

Customs Circular No. IV of 1900.

From—The Secretary to the Government of India, Finance and Commerce Department, No. 779 S. R., dated the 14th February 1900,

To—The Secretary to the Government of Bombay, Revenue Department.

I am directed to acknowledge the receipt of your letter No. 485, dated the 22nd January 1900, regarding the rate of duty to be charged on iron tapering pipes for telephone posts.

2. In reply I am to say that telephone posts, though imported in the form of tubes, are not adapted for use as pipes and tubes (item No. 15 of the schedule issued under Finance and Commerce Department's Notification No. 5896 S. R., dated 29th December 1899). They are really tubular posts or standards (and, it is understood, are specialized for this use by their tapering ends). They should, therefore, be classed as "telephonic instruments, apparatus and appliances" (item No. 49 of the schedule).

PART V.

Bills introduced in the Council of the Governor General of India for making Laws and Regulations, Reports of Select Committees presented to the Council, and Bills published under Rule 23.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Report of the Select Committee on the Bill to provide for the Regulation and Inspection of Mines was presented to the Council of the Governor General of India for the purpose of making Laws and Regulations on the 2nd March, 1900:—

WE, the undersigned, Members of the Select Committee to which the Bill to provide for the Regulation and Inspection of Mines was referred, have considered the Bill and the papers noted in the margin, and have now the honour to submit this our Report, with the Bill as amended by us annexed thereto.

From Chief Commissioner, Coorg, No. 999, dated 22nd April, 1899 [Paper No. 1].
From Government, Punjab, No. 308, dated 18th April, 1899 [Paper No. 2].
Office memorandum from Government of India, Finance and Commerce Department, No. 2871-S. R., dated 24th June, 1899, and enclosure [Papers No. 3].
From Resident, Hyderabad, No. 177, dated 3rd July, 1899 [Paper No. 4].
From Officiating Agent to Governor General in Baluchistan, No. 505—C., dated 13th July, 1899 [Paper No. 5].
From High Court, Calcutta, No. 1867, dated 15th July, 1899 [Paper No. 6].
From Chief Commissioner, Assam, No. 66-L. & L.—2820-J., dated 13th July, 1899 [Paper No. 7].
From Government, North-Western Provinces and Oudh, No. 2660-I—458-B, dated 4th August, 1899, and enclosure [Papers No. 8].
From Chief Commissioner, Ajmer-Merwara, No. 831, dated 2nd August, 1899, and enclosures [Papers No. 9].
From Government, Burma, No. 292-2M.—16, dated 12th August, 1899 [Paper No. 10].
From Chief Commissioner, Central Provinces, No. 6611, dated 26th August, 1899, and enclosure [Papers No. 11].
From Government, Bombay, No. 7462, dated 19th October, 1899, and enclosures [Papers No. 12].
From Government, Madras, No. 673, dated 2nd October, 1899, and enclosure, and No. 761, dated 10th November, 1899, and enclosure [Papers No. 13].
From Government, Bengal, No. 2214-Marine, dated 17th November, 1899, and enclosures [Papers No. 14].
Endorsement from Government of India, Revenue and Agricultural Department, No. 4451—22-23, dated 19th December, 1899, and accompaniments [Papers No. 15].
From Government, Bengal, No. 124 Mne., dated 18th January, 1900, and enclosure [Papers No. 16].
Office memorandum from Private Secretary to His Excellency the Viceroy, No. 1337, dated 25th January, 1900, and enclosures including Memorial of Native Owners, Agents, etc., of certain Coal Mines in Bengal [Papers No. 17].
From Secretary, Kolar Gold Field Mining Board, Mysore State, and enclosures [Papers No. 18].

Clause 1.—We have amplified sub-clause (2) so as to make the proposed Act extend to all parts of British India, and we have declared (sub-clause (3)) that it shall come into force at once. Having regard to the provisions of the new clauses 32 and 33, as to which see our remarks *infra*, we think that there need be no postponement of the commencement of the Act generally.

2. *Clause 3 : definition of "mine."*—In order to make it clear that quarries of moderate depth are not intended to be regulated by the provisions of the proposed Act, we have added words to this definition specially excepting them from its scope.

3. *Clause 4.*—In accordance with suggestions made in the papers, we have styled the Inspector of Mines, who is to have jurisdiction throughout the whole of British India, the Chief Inspector of Mines. This entails a number of consequential alterations in subsequent clauses where "the Inspector" is referred to.

We think it should be expressly declared that no Inspector shall be a partner or have any interest, direct or indirect, in any mine or mining rights in India. We have therefore added a new sub-clause (*5*) to this clause based on the last words of clause 6 of the draft Bill proposed by the Mines Committee.

4. *Clause 5.*—It appears to us that the powers conferred on the Inspector by clauses 10, 15, sub-clause (*1*), and 22 of the Bill, which require a practical knowledge of mining, should under no circumstances be exercised by the District Magistrate under this clause. We have therefore added a proviso specially excepting these powers.

5. *Clause 6.*—In accordance with a suggestion made by the Government of Bombay, we have added words to sub-clause (*d*) of this clause empowering the Inspector to prohibit employment in or admission to a mine on account of physical defects which make the presence of such person dangerous to himself or others.

In our opinion, there should be an appeal from any order of an Inspector under this clause to such authority as the Local Government may direct, and we have accordingly added a proviso to this effect.

6. *Clause 7.*—We have omitted the last eight words of sub-clause (*1*) of this clause, which declares that all information acquired by Inspectors of Mines in the course of their inspections shall be deemed to be official secrets because they appear to us to be unnecessary as well as misleading. We think that no prosecution should be allowed under this clause save at the instance of the Local Government or the party aggrieved, and have added a new sub-clause (*3*) to this effect in place of the original sub-clause, which will be superfluous if sub-clause (*1*) is amended, as we have suggested above.

7. *Clauses 9—12.*—These clauses, which deal with the employment in, and admission of children to, mines and enable rules to be made for prohibiting, restricting or regulating the employment of women and children below ground, and for regulating various matters in connection with employment of all persons in mines, have been very strongly objected to by the Indian Mining Association. In view of these objections, which appear to us to be to some extent well founded, we have proposed various important alterations in these clauses.

8. *Clause 9.*—For sub-clause (*2*) of this clause, which absolutely prohibited the admission of any child to a mine if over four and under ten years of age, we have substituted three new sub-clauses, under which the Local Government is invested with power only under certain very special circumstances, to prohibit the admission in any mine of children over four and under twelve years of age. The special circumstances prescribed appear to us to be such that no reasonable objection could be taken to the exclusion of children from a mine where they are shown to exist, and, in order to prevent the possibility of the power conferred by the clause being arbitrarily used, we have further provided (sub-clause (*3*)) that, except when there is immediate danger to the life or safety of the children concerned, no order of prohibition shall be issued until the mine-owner has had one month's notice of the intention to issue the order and an opportunity of stating his objections, if any, thereto. Moreover, in order to give time to the mine-owner to adapt his arrangements to the prohibition, we have declared that the order shall not take effect until the expiry of two months from its date.

On the other hand, while proposing these concessions in favour of the mine-owner, we have (sub-clause *1*) raised the minimum age below which a child may not be employed in a mine from ten to twelve, this being the minimum age most generally recognised when children are not employed, and the age suggested by the Mining Committee.

9. *Clause 10.*—We have added two new sub-clauses to this clause, giving power to a mine-owner, who objects to any order prohibiting the employment of women or children in his mine on the ground that such employment is dangerous or harmful, to send in his objection within twenty days of his receipt of the order to the officer or authority appointed under clause 15 and providing for the reference of the matter by such officer or authority to a committee appointed under clause 16 to be dealt with as provided in the case of other matters referred to a committee under that clause. We have also provided for the postponement of the operation of the order, save in cases when the Chief Inspector or Inspector thinks there is immediate danger to the life or safety of the women or children, till the mine-owner has had an opportunity of objecting, and if he does object, until the orders of the Local Government are passed in the matter under clause 16.

10. *Clause 11.*—It will be seen that we have suggested alterations in sub-clauses (*b*), (*d*) and (*e*) of sub-clause (*1*) of this clause. With regard to the latter two sub-clauses, we consider that their terms were too widely expressed in the Bill as introduced and gave just cause of complaint to mine-owners as enabling rules to be made which might seriously disturb existing relations between them and their employés. We have therefore restricted their scope very considerably, limiting sub-clause (*d*) to the regulation of the size and capacity of the measures

employed and the method of applying such measures when the wages of persons employed in a mine depend on the quantity of work done, and sub-clause (*e*) to the restriction of the time for which wages earned may be withheld and the regulation of the conditions under which deductions may be made. As now restricted, they do not appear to us to be open to any reasonable objection, while they give powers to provide for matters which it may become highly desirable to regulate. In addition to these alterations in the first sub-clause, we have proposed additions to this clause with the object of guarding against the injudicious use of the powers conferred by it. By the new sub-clause (*2*) we have restricted the application of the whole clause, or of any part of it, to such mines or classes of mines as the Governor General in Council may, on the application of the Local Government and after making such inquiry as he may deem necessary, think fit to apply it to. Then by the new sub-clause (*3*) we have declared that rules proposed under the clause shall not be made until after previous publication in draft for general information; and, further, by the new sub-clause (*4*) we have prescribed a minimum time of three months for the submission of criticisms on the draft rules, the final consideration of such rules in the light of the criticisms thereon received being prohibited until the expiry of that time.

11. *Clause 12.*—In accordance with a suggestion made by the Indian Mining Association, we have provided for the grant of medical certificate of age on the request of mine-owners. We have also similarly provided for the case of Inspectors who, we think, should be able to require the Civil Surgeon to give such a certificate without the payment of any fee. In order to make the meaning of sub-clause (*2*) more clear, we have altered its language somewhat by making it declare that certificates granted under the clause shall be "received as *primâ facie* evidence" of the age of the persons referred to therein. The alterations suggested in sub-clause (*3*) of this clause are made with the object of making the clause more accurate in form.

12. *Clause 13.*—We have altered the wording of this clause so as to make it clear that the owner or agent of a mine may himself be the manager, and have added a second sub-clause declaring that the manager shall have superintendence of all parts of the mine.

13. *Clause 14.*—We have omitted the words "knowledge or" in the last line of sub-clause (2), and thus limited the responsibility of the manager to contraventions of the rules which have occurred with his consent.

14. *Clause 15.*—We have provided for the reporting of notices issued by the Inspector of Mines under this clause to the District Magistrate, as well as to the officer or authority appointed by the Governor General in Council or Local Government, in order that he may be able to take action at once under section 144 of the Criminal Procedure Code if he considers this desirable. We have also omitted the provision that the notice shall require any matter, thing or practice which is dangerous or defective to be remedied "within a specified time," as no such provision occurs in the English Statute on which this clause is modelled, while such a provision seems to be inconsistent with the proviso which gives the mine-owner twenty days in every case within which to send in his objections to doing what is required of him.

15. *Clause 16.*—A number of important amendments have been proposed by us in this clause. In the first place, in sub-clause (*1*) (*a*) we have added words, taken from section 47, clause (*18*), of the Coal Mines Regulation Act, 1887, prescribing that the members of the Committee, other than the President, shall be "practical mining engineers or persons accustomed to the working of mines." Then in sub-clause (*2*) we have required the mine-owner to exercise his right of nomination within a prescribed time. Further, we have added a new sub-clause (*3*), taken from section 47, clause (*3*), of the Coal Mines Regulation Act, 1887, debarring any person from serving on a Committee, who is in any way interested in the mine to which the inquiry relates. We have also added another new sub-clause (*6*) empowering the Committee to exercise such of the powers of an Inspector of Mines as they may think necessary or expedient for the purposes of their inquiry. Lastly, we have in sub-clause (*7*) conferred power on the Local Government to give directions as to the remuneration to be paid to the members of a Committee and as to the expenses of an inquiry, including such remuneration, providing in a new sub-clause (*8*) for the mode of the recovery of such expenses when payable by a mine-owner.

16. *Clause 17.*—We have proposed various amendments in this clause also. We have first differentiated between mines already open and those which may be opened hereafter, requiring notice to be given in the former case within three months of the commencement of the Act, and in the latter, within three months of the commencement of mining operations. Then, in cases in which no Inspector of Mines has been appointed for the local area, we have provided that the notice should be given to the Chief Inspector. Lastly, we have greatly relaxed the stringency of the clause by making it sufficient to give information as to the kind of minerals to be worked and the nature of the moving power to be used, instead of the more precise information required under the Bill as introduced.

17. *Clause 18.*—This clause should, we think, be extended so as to cover all accidental explosions, but we would not require notice of accidents in which *serious* bodily injury has not occurred, and we have modified the clause on these lines.

18. *Clause 19.*—We have altered the first sub-clause of this clause so as to enable inquiry to be held under our law as under section 45 of the Coal Mines Regulation Act, 1887, in the case of all explosions or accidents. The new sub-clause (*3*), which we have added, permits the persons holding an inquiry under the clause, like the Committee holding an inquiry

under clause 16, to exercise such of the powers of an Inspector as they may think necessary or expedient for the purposes of the inquiry.

19. *Clause 21.*—We have made provision for appeals from the orders of the Chief Inspector and Inspectors of Mines and for the regulation of the constitution of Committees to be appointed under clause 16 by additions to sub-clauses (*a*) and (*j*) of sub-clause (2) of this clause.

We have carefully considered the question, raised in the last paragraph of the Statement of Objects and Reasons appended to the Bill as introduced, as to how far provision should be made in the proposed law for the protection of public property and works from injury in respect of any mine, and we have come to the conclusion that, if special provision is made for the keeping of proper plans by mine-owners, for inspection by Government officers and for the giving of due notice of mining operations undertaken within a certain distance of any public works, the general law of lateral support should be sufficient for the protection of Government. The Bill as introduced provides for plans and inspections, but it contains no provisions requiring notice of mining operations likely to endanger public works. In order to provide for this point, we have expanded the provisions of sub-clause (*r*) of sub-clause (2) of that clause into three new sub-clauses (*r*), (*s*) and (*t*), providing respectively for the safety of the public and their protection from injury in respect of any mine, whether worked or not, the protection of public property and work from injury in respect of any mine which is not being worked, and the giving of notices by mine-owners before undertaking mining operations in the vicinity of any railway or specified public works, suggesting fifty yards as the distance within which such notice will be required. These provisions go as far as, in our opinion, the scope of the present Bill would seem to justify. If experience should show that further provision is required, we think that this should form the subject of special legislation.

Having regard to the great importance to those concerned of the rules which this clause gives power to make, we think that a draft of such rules should in all cases be published for general information for at least three months before the draft is taken into consideration, and that this should be laid down specifically in the proposed law. We have therefore added a new sub-clause (4) to this clause with this object.

20. *Clause 22.*—This clause, which deals with the procedure to be followed in the making of the special rules for the control and guidance of persons employed in mines, which the owners of such mines are to make, has been to a great extent recast by us, our object being to enable the mine-owner and the Inspector to come, as far as possible, to an agreement as to the terms of any proposed rules before the rules are referred to the officer or authority appointed by the Local Government for their settlement. Instead of empowering the Inspector, as in the Bill as introduced, to require the mine-owner to frame draft rules, under pain of incurring the fine prescribed by clause 23, sub-clause (3) (*e*), we have provided that, in the event of the mine-owner failing for two months to prepare sufficient rules after having been called upon by the Inspector or Chief Inspector so to do, the Inspector or Chief Inspector shall himself prepare what, in his opinion, are sufficient rules, and send them to the mine-owner, and that an interval of two months shall, in the event of any difference of opinion about the rules or any of them, elapse before the rules are referred by the Inspector or Chief Inspector to the officer or authority appointed by the Local Government for their settlement, so as to allow for full discussion between parties who may be at a considerable distance from one another.

21. *Clause 23.*—The alterations we have proposed in this clause are merely of a drafting nature, the omission of clause (*e*) of sub-clause (3) being consequential on the alterations proposed by us in clause 22.

22. *Clause 24.*—This clause, which requires every prosecution of an owner, agent or manager for an offence against the proposed law to be instituted by an Inspector or Chief Inspector, is new. It is taken on the suggestion of the Government of Bengal from clause 19 of the draft Bill prepared by the Mines Committee.

23. *Clause 26 (formerly clause 25).*—We have restricted this clause, which required all offences against the Act to be tried by first class Magistrates or Sub-divisional Magistrates, to offences committed by owners, agents, managers or assistant managers and to offences punishable with imprisonment. Other offences may, we think, be properly tried by Magistrates of any class.

24. *Clause 27 (formerly clause 26).*—We think that this clause, in the Bill as introduced, went too far in directing that "all further" criminal proceedings should be stayed and the accused discharged. We have therefore suggested the omission of the words "all further" before, and of the words "discharge the accused" after, the words "criminal proceedings."

25. *Clause 29 (formerly clause 28).*—We have introduced words in this clause enabling the Government to make conditional as well as absolute exemptions, which may, we think, be useful under certain circumstances.

26. *Clause 30.*—This clause is new. It gives a general power to the Government of India and the Local Government to reverse or modify any order passed under the proposed law by any authority subject to their control. The Government will thus be able to interfere in cases in which no further appeal lies, but in which it is of opinion that interference is desirable on equitable grounds.

27. *Clause 32*, a temporary provision, is new. Having regard to the hardship which might be caused to mine-owners if the provisions of clause 9, sub-clause (*1*), were applied

to them at once on the passing of the Act, and to the importance of securing that no action taken by Inspectors under clauses 10 and 15 should conflict with the general principles upon which rules and exemptions will be framed by Government—a process which will necessarily take some time—we think that the operation of these provisions should be postponed for six months after the rest of the proposed Act comes into force, as we have provided in this clause.

28. *Clause 33*, another temporary provision, is also new. It has been inserted in fulfilment of the pledge given by the Government of India in their Resolution No. $\frac{10}{7-10}$, dated 9th October, 1896, that no punishment should be inflicted under the proposed new law for a year after it comes into force. After carefully examining clause 23, the penal clause, of the Bill, we consider that this pledge will be substantially redeemed if prosecutions for offences punishable under the portions of that clause which we have indicated in our new clause are barred for a year. It could never have been intended, we think, that the other offences punishable under clause 23 should not be punishable at once.

ALLAN ARTHUR.*

The 1st March, 1900.

[The Hon'ble Nawab Bahadur Sir Khwaja Ahsanullah, K.C.I.E., had to leave Calcutta owing to indisposition before the Select Committee had finally settled their Report.]

* Subject to Minute appended.

For the reason that this Bill is drafted on the model of the English Coal Regulation Acts, which do not deal with metalliferous mines, I think that the provisions of clause 21 (2) (*c*), (*d*), (*e*) and (*f*), giving the Government power to prescribe the qualifications of managers, and all persons acting under them, to regulate the manner of ascertaining by examination or otherwise, the qualifications of managers and persons acting under them, and to provide for the grant, renewal, and cancellation of certificates of competency, should not be held to apply to mines of the latter class, but that following the law in England, and in other countries, such mines should, for the present at any rate, be left in India on the same footing as compared with coal mines which they occupy in England, where the interest of both classes are strongly represented in the Legislature.

Further, for the reason that the gold and coal mining industries are, the former chiefly, and the latter largely, carried on in Native States, which are expected to adopt, and may be expected to adopt, as far as may be, the mining laws and rules obtaining in British India, I think it undesirable that such subjects as the prohibition of the employment of women and children and the limitation of the hours of labour, should be left by the Legislature as proposed by clause 11 (*1*) (*a*) and (*b*) to be dealt with by the executive Government by rule and notification, whether or not such subjects should be dealt with in such manner in British India, and I think that the far-reaching effect the proposed legislation will have on these important industries prosecuted in Native States by companies with an English domicile calls for hardly less consideration than its probable results in respect of such industries in British India.

Subject to the above remarks, I agree in the report, which I have accordingly signed. I also agree in the Minute of Mr. Bose.

J. D. REES.

I sign the report subject to the following remarks:—

Clause 9, sub-clause (*1*), puts an absolute bar not only to the *employment* of children under 12 years, but also prohibits their being *allowed to work* below ground. Now it would appear that, besides being employed on wages payable to them direct for work done, children are not unoften employed by their parents to help them in fulfilling their contrcats with mine-owners, the work assigned to the children by the parents being such as is suited to their age. It has not been shown that this kind of employment under the existing state of things in the coal mines in Bengal, a most important class of mines to be affected by the Bill, has any injurious effect on the health and growth of the children whose services are thus utilized by their parents. Under the circumstances, absolutely to prohibit children under 12 years from taking any part in works below ground would be opposed to existing practice, and would, without conferring any benefit on the children themselves, cripple the wage-earning capacity of the parents. At the same time, there are mines where children cannot work underground without suffering in health, or running the risk of bodily injury. In such cases, legislative interference would be necessary for the protection of the children. Thus, though power to prevent children from being allowed to work underground in mines should exist to meet cases like the above, an absolute prohibition of the nature contemplated by sub-clause (*1*) of clause 9 goes beyond the requirements of the case. Even independently of this sub-clause, a child, who is defined as a person under the age of 14 years, can be prevented from working in a particular mine by an order under clause 10, or in particular classes of mines by rules made under clause 11 (*1*) (*a*). This method would be as effectual in meeting cases where State interference would be needed as an inelastic provision like that contained in sub-clause (*1*) of clause 9, while it would not touch cases where interference with the right of private contract would not only not serve any useful purpose, but might be positively harmful in so far as it might reduce the collective earnings of a family of coal-mine labourers.

B. K. BOSE.

In common with every one connected with the Coal industry in Bengal, I am entirely opposed to the inclusion in the Bill of sections 9 to 12. Neither the employers nor the employed want any interference with labour, of any sort or description. The workers in the Bengal Coal mines should be allowed to go in and out of the mines irrespective of sexes and irrespective of ages and to work or not as they like, as has been their custom from time to immemorial. No evidence of abuses or hardships requiring redressing or as to the necessity for any interference by Government with labour has been placed before the Select Committee, and I am very strongly of opinion that any attempt on the part of Government to interfere with existing labour conditions will be a hardship not only to the mine-owners, but also to the labourers themselves.

I am also of opinion that the general rules should, as far as possible, be incorporated in the Bill, as is the case in the English Acts.

ALLAN ARTHUR.

No. II.

A Bill to provide for the Regulation and Inspection of Mines.

WHEREAS it is expedient to provide for the regulation and inspection of mines; It is hereby enacted as follows:—

Preliminary.

Short title, extent and commencement.

1. (*1*) This Act may be called the Indian Mines Act, *1900*.

(*2*) It extends to the whole of British India *including British Baluchistan, the Santhal Parganas and the Pargana of Spiti*; and

(*3*) *Subject to the provisions of section 32*, it shall come into force *at once*.

Saving of Regulation XII, 1887. XII of 1887.

2. Nothing in this Act shall be construed to affect the provisions of the Upper Burma Ruby Regulation, 1887.

Definitions.

3. In this Act, unless there is anything repugnant in the subject or context,—

[Cf. 50 & 51 Vict., c. 58, s. 75.]

(*a*) "agent," when used in relation to a mine, means any person appointed as the representative of the owner in respect of the mine or of any part thereof, and as such superior to a manager appointed under this Act;

[Cf. XV of 1881, s. 2.]

(*b*) "child" means a person under the age of fourteen years;

[Cf. ibid.]

(*c*) a person is said to be "employed" in a mine who works, whether for wages or not, in any mining operation, or in cleaning or oiling any part of any machinery used in *or at* the mine, or in any other kind of work whatsoever incidental to, or connected with, mining operations;

[Cf. 35 & 36 Vict., c. 77, s. 41.]

(*d*) "mine" includes every shaft in the course of being sunk, and every level and inclined plane in the course of being driven for commencing or opening any mine or for searching for or proving minerals, and all the shafts, levels, planes, works, machinery, tramways and sidings, both below ground and above ground, in and adjacent to and belonging to the mine; *but it does not include any pit, quarry or other excavation the depth of no part of which measured from the level of the adjacent ground exceeds twenty feet and no part of which extends beneath the superjacent ground to a distance greater than ten feet.*

[Cf. 50 & 51 Vict., c. 58, s. 75.]

(*e*) "owner," when used in relation to a mine, means any person who is the immediate proprietor or lessee or occupier of the mine or of any part thereof, and does not include a person who merely receives a royalty, rent or fine from the mine, or is merely the proprietor of the mine subject to any lease, grant or license for the working thereof, or is merely the owner of the soil, and not interested in the minerals of the mine; but any contractor for the working of a mine or any part thereof shall be subject to this Act in like manner as if he were an owner, but *not* so as to exempt the owner from any liability;

[Cf. 50 & 51 Vict., c. 58, s. 75.]

(*f*) "prescribed" means prescribed by rules made under this Act; and

(*g*) "shaft" includes pit.

Inspectors.

Inspectors.

[Cf. XV of 1881, s. 3.]

4. (*1*) The Governor General in Council shall, by notification in the Gazette of India, appoint a person to be *Chief* Inspector of Mines throughout British India.

(*2*) The Local Government may, in its discretion, by notification in the local official Gazette, appoint such persons as it thinks fit to be Inspectors of Mines within such local areas as it may assign to them respectively.

(*3*) Every Inspector of Mines appointed under sub-section (*2*) shall, in the performance of his duties, be subordinate to the *Chief* Inspector of Mines appointed under sub-section (*1*) in such respects and to such extent as may be prescribed by the Governor General in Council.

XLV of 1860.

(*4*) *The Chief Inspector and every* Inspector of Mines appointed under this section shall be deemed to be a public servant within the meaning of the Indian Penal Code, and shall be subordinate to such authority as the Governor General in Council or the Local Government, as the case may be, may direct.

(*5*) *No Chief Inspector or Inspector of Mines shall be a partner or have any interest, direct or indirect, in any mine or mining rights in India.*

Powers of District Magistrate.

[Cf. ibid, s. 2.]

5. The District Magistrate may exercise such of the powers and perform such of the duties of an Inspector of Mines as the Local Government may, by general or special order, direct:

Provided that nothing in this section shall be deemed to empower a District Magistrate to exercise any of the powers conferred by

section 10, sub-section (1) of section 15 or section 22.

[Cf. XV of 1881, s. 4.]

Powers of Inspectors of Mines.

6. *The Chief* Inspector of Mines may, anywhere within British India, *and an Inspector of Mines may*, within the local area for which he is appointed,—

(*a*) make such examination and inquiry as he thinks fit in order to ascertain whether the provisions of this Act *and of the rules and orders made thereunder* are observed in the case of any mine;

(*b*) enter, with such assistants (if any) as he thinks fit, inspect and examine any mine and any part thereof at all reasonable times by day or by night, but not so as unreasonably to impede or obstruct the working of the mine;

(*c*) examine into, and make inquiry respecting, the state and condition of any mine or any part thereof, the ventilation of the mine, the sufficiency of the special rules for the time being in force in *and at* the mine and all matters and things connected with or relating to the safety of the persons employed in or about the mine;

(*d*) order that any person shall not be employed in, or admitted to, a mine where *there is* ground for believing that such employment or admission would, by reason of the age or sex of such person, *or by reason of any physical defect, be dangerous to himself or others: Provided that an appeal shall lie to such authority as the Governor General in Council or the Local Government, as the case may be, may direct from any order made under this clause*;

(*e*) do all other things required of him by *or under* this Act and exercise such other powers as may be necessary for carrying this Act into effect.

[Cf. 50 & 51 Vict., c. 58, s. 41, § 2.]

Facilities to be afforded to Inspectors.

7. Every owner, agent or manager of a mine shall furnish *the Chief Inspector and* every Inspector of Mines, on requisition, with the means necessary for making any entry, inspection, examination or inquiry in relation to the *working of the* mine under this Act.

[Cf. 11 of 1856, s. 17.]

Information acquired to be deemed official secrets within meaning of Act XV, 1889.

8. (*1*) All copies of, and extracts from, registers or other records appertaining to any mine, and all other information acquired by the Chief Inspector or an Inspector of Mines, or by any one assisting him, in the inspection of any mine under this Act, shall be regarded as strictly confidential.

(*2*) If any such person discloses to any one, other than *a Magistrate or* an officer to whom *he* is subordinate, any such *information* as aforesaid without the consent of *the Governor General in Council or* the Local Government, *as the case may be*, he shall be guilty of a breach of official trust, and shall be punishable in the manner provided by section 4 of the Indian Official Secrets Act, 1889.

XV of 1889.

(*3*) *No Court shall take cognisance of any offence under this section unless on a prosecution at the instance of the Governor General in Council, or the Local Government, or of a person aggrieved by the same.*

Operatives.

Employment and admission of children in or to mines.

9. (*1*) No child shall be employed *or allowed to work* below ground in any mine if he is under the age of *twelve* years.

(*2*) *The Local Government may, by order in writing, prohibit the admission below ground in any mine of children who are over the age of four and under the age of twelve years, if it is satisfied that the prohibition contained in sub-section (1) is not generally enforced in such mine, or that by reason of the depth of the mine, or of the difficulty of ingress and egress, or of the nature of the mining operations, or of insufficient ventilation, the personal safety or physical health of children in such mine is being, or is likely to be, impaired.*

(*3*) *Except when, for reasons to be recorded in the order, the Local Government is of opinion that the admission of such children below ground is immediately dangerous to the life or safety of the children to whom the order relates, the Local Government shall, before making any order under sub-section (2), give notice in writing to the owner, agent or manager of the mine of its intention to make the same, and any such owner, agent or manager objecting to the proposed order may, within one month of the receipt of the said notice, submit his objection in writing to the Local Government.*

(*4*) *If no such objection is received within the said period of one month, or if any objection so received is deemed insufficient, the Local Government may make the proposed order, which shall take effect on the expiry of two months from the date thereof.*

Prohibition of employment of women or children in mines.

10. (*1*) Subject to the control of the *Governor General in Council or the* Local Government, or of such authority as *the Governor General in Council or* the Local Government, *as the case may be*, may appoint in this behalf, *the Chief Inspector or* any Inspector of Mines may, by order in writing and for reasons to be stated therein, prohibit the employment of women or children, or of both, in *or at* any mine or part thereof, or in any particular kind of labour *in any*

mine, whether above ground or below ground, when such employment is, in his opinion, dangerous for, or *harmful* to, women or children, as the case may be.

[*Cf.* proviso to s. 15 (*1*).] (*2*) *If the owner, agent or manager of the mine objects to any order made under sub-section* (*1*), *he may, within twenty days after its receipt, send his objection in writing, stating the grounds thereof, to the officer or authority appointed under section 15, and thereupon the said officer or authority shall, by order in writing, refer the matter to a Committee constituted under section 16, to be dealt with as in that section provided.*

(*3*) *No order made under sub-section* (*1*) *shall take effect until the expiry of twenty days from its receipt by the owner, agent or manager of a mine, or, if he sends any objection to the order within that period in accordance with the provisions of sub-section* (*2*), *until the receipt of the orders which may be passed by the Local Government under section 16, sub-section* (*7*):

Provided that if, for reasons to be recorded in the order, the Chief Inspector or Inspector is of opinion that the employment prohibited is immediately dangerous to the life or safety of the women or children to whom the prohibition relates, he may direct that the prohibition take effect forthwith; and in such case the order of prohibition shall be complied with from the time of its receipt until the receipt of the orders which may be passed by the Local Government under section 16, sub-section (*7*).

Rules as to employment in mines. **11.** (*1*) Subject to the provisions of section 9, *the* Local Government, with the previous sanction of the Governor General in Council, may, by notification in the local official Gazette, make, in respect of all mines or of particular classes of mines, rules—

(*a*) prohibiting, restricting or regulating the employment of women or children below ground or on particular kinds of labour;

(*b*) limiting the number of hours in any one week or in any one day for which women or children may be employed, or allowed to be, for the purposes of employment, below ground, *and prescribing the intervals of rest which shall be allowed them*;

(*c*) requiring the owners or agents to maintain, in such form as the Governor General in Council or the Local Government, as the case may be, may think fit, registers of the women and children (if any) employed, and of their respective employments;

(*d*) *regulating, where the wages of the persons employed depend on the quantity of work done,* the size or capacity of the measures by which such quantities are to be ascertained, *and the method of applying such measures*; and

(*e*) *restricting the time for which wages earned may be withheld,* and regulating the conditions under which deductions may be made therefrom.

(*2*) *Nothing in sub-section* (*1*) *shall apply to any mine or class of mines until the Local Government has made application to the Governor General in Council that the sub-section, or any part thereof, may be applied to such mine or class of mines, and until the Governor General in Council has, after making such inquiry, if any, as he may deem necessary, directed by notification in the Gazette of India that the sub-section or any part thereof shall apply to such mine or class of mines.*

(*3*) *The power to make rules conferred by this section is subject to the condition of the rules being made after previous publication.*

(*4*) *The date to be specified in accordance with clause* (*3*) *of section 23 of the General Clauses Act, 1897, as that after which a draft of rules proposed to be made under this section will be taken into consideration shall not be less than three months from the date on which the draft of the proposed rules was published for general information.* X of 1897.

(5) All rules made under this section shall be published in the local official Gazette, and, on such publication, shall have effect as if enacted in this Act.

Medical certificates and proof of age. **12.** (*1*) The Civil Surgeon, or such other person practising medicine or surgery as the Local Government may appoint in this behalf for any local area, shall examine any person employed or desirous of being employed in a mine situate in such local area, and grant him a certificate in writing stating whether his age, as nearly as can be ascertained from such examination, is above or below four, *twelve* or fourteen years, as the case may be, *when requested so to do*— [*Cf.* XV of 1881, ss. 5 & 16.]

(*a*) *by the person so employed, or desirous of being employed, or by the parent or guardian of such person; or*

(*b*) *by the owner, agent or manager of the mine; or*

(*c*) *by the Chief Inspector or an Inspector of Mines:*

Provided that, except when the examination is made at the request of the Chief Inspector or an Inspector of Mines, the Civil Surgeon or other person appointed as aforesaid shall not be bound to grant any certificate under this section except on payment of the prescribed fee (*if any*).

(*2*) A certificate granted under sub-section (*1*) shall, for the purposes of this Act, be *received as primâ facie* evidence of the age of the person referred to therein.

(*3*) Where an act would, if a person were *over* four, *or under twelve or* fourteen years of

age, as the case may be, be an offence against this Act, and such person is, in the opinion of the Court, apparently *over or under such age, as the case may be*, it shall lie on the accused to prove that the person is not *over or under such age, as the case may be.*

Mining Operations and Duties and Responsibilities of Owners, Agents and Managers.

Appointment of manager.

13. (*1*) For every mine *there shall be* a manager, who shall have the prescribed qualifications.

(*2*) *The manager shall have the superintendence of all parts of the mine.*

[Cf. 50 & 51 Vict., c. 58, s. 59; XV of 1881, s. 17.]

Duties and responsibilities of owners, agents and managers.

14. (*1*) The owner, agent and manager of every mine shall be responsible that all operations carried on in connection therewith are conducted in accordance with the provisions of this Act *and the rules and orders made thereunder.*

(*2*) In the event of any contravention of, or failure to comply with, any *such* provisions on the part of any person whomsoever, the owner, agent and manager shall each be guilty of an offence against this Act, unless he proves that he had taken all reasonable means, by publishing and to the best of his power enforcing the said provisions, to prevent such contravention or non-compliance, and that such contravention or non-compliance occurred without his consent.

[Cf. 50 & 51 Vict., c. 58, s. 42.]

Notice by Inspector of Mines of causes of danger not expressly provided against.

15. (*1*) If, in any respect which is not provided against by any express provision of this Act, *or of the rules or orders made thereunder, the Chief Inspector or* any Inspector of Mines finds that any mine, or any part thereof, or any matter, thing or practice in or connected with the mine, or with the control, management or direction thereof, is dangerous to human life or safety, or defective so as to threaten, or tend to, the bodily injury of any person, he may give notice in writing thereof to the owner, agent or manager of the mine, and shall state in the notice the particulars in which he considers the mine, or part thereof, or the matter, thing or practice, to be dangerous or defective, and require the same to be remedied and shall *forthwith* report the same to *the District Magistrate and to* such officer or authority as the Governor General in Council or the Local Government may, by general or special order, appoint in this behalf:

Provided that, if the owner, agent or manager of the mine objects to remedy the matter complained of in the notice, he may, within twenty days after the receipt of the notice, send his objection in writing, stating the grounds thereof, to such officer or authority as aforesaid, and that thereupon the said officer or authority shall, by order in writing, refer the matter to a Committee constituted as hereinafter provided.

(*2*) Nothing in this section shall affect the powers of a Magistrate under section 144 of the Code of Criminal Procedure, 1898.

V of 1898.

[Cf. 50 & 51 Vict., c. 58, s. 42.]

Constitution of Committee of reference.

16. (*1*) Every Committee to which a reference is made under section 15, shall consist of—

(*a*) one or more persons *being practical mining engineers or persons accustomed to the working of mines* nominated by the officer or authority appointed under section 15, sub-section (*1*), and a like number of persons *similarly qualified* nominated by the owner, agent or manager of the mine concerned ; and

(*b*) a president nominated by such officer or authority as aforesaid.

(*2*) If the owner, agent or manager fails, wholly or in part, to exercise his right of nomination under sub-section (*1*), clause (*a*), *within the prescribed time,* such officer or authority as aforesaid shall nominate the number of persons necessary to constitute the Committee.

(*3*) *No person shall serve as a member or president of any Committee nominated under sub-section (1) who is employed in, or in the management of, or is interested in, the mine to which the inquiry relates.*

(*4*) The Committee constituted as aforesaid shall, as soon as may be, hold an inquiry into the matter to which the order of reference relates, and shall hear and record such information on the subject as the owner, agent or manager or the Inspector of Mines may desire to place before it.

[Cf. I of 1894, ss. 14, 19 (2).]

(*5*) The said Committee shall have all the powers of a Civil Court for the purpose of enforcing the attendance of witnesses and compelling the production of documents; and every person required by the Committee to furnish any information before it shall be deemed to be legally bound to do so within the meaning of section 176 of the Indian Penal Code.

XLV of 1860.

(*6*) *The said Committee may exercise such of the powers of an Inspector of Mines as they may think it necessary or expedient to exercise for the purposes of such inquiry.*

(*7*) The Committee holding an inquiry under this section shall make a report to the Local Government through such officer or authority as aforesaid, and the Local Government shall thereupon pass such orders in the matter as it may think fit; *and may give directions as to the remuneration (if any) to be paid to the members of the Committee and as to payment of the expenses of the inquiry, including such remuneration.*

(*8*) *Where the Local Government directs that the expenses of an inquiry including the remuneration (if any) to be paid to the members of the Committee, are to be paid, in whole or*

in part, by an owner, agent or manager of a mine, the amount claimable from him may be recovered, on application by the Chief Inspector or the Inspector of Mines to a Magistrate having jurisdiction at the place where the mine is situate or where the owner, agent or manager is for the time being resident, by the distress and sale of any movable property within the limits of his jurisdiction belonging to such owner, agent or manager.

[Cf. XV of 1881, s. 14.]

Notice of commencement of work in a new mine.

17. The owner, agent or manager of a mine shall, *in the case of existing mines within three months after the commencement of this Act, and in the case of new mines* within *three months* after the commencement of mining operations, give notice in writing to the Inspector of Mines appointed under section 4, sub-section (2), for the local area in which the mine is situate, *or, if no Inspector of Mines has been appointed for such area, to the Chief Inspector of Mines*, of the address to which he desires his letters to be directed, *the kind of minerals worked or to be worked*, the name of the person under whom *the mining operations are or* are to be conducted, and the *nature* of the moving power *which is or is* to be used.

[Cf. ibid, s. 13.]

Notice to be given of accidents.

18. *When any accidental explosion occurs in a mine, or when* any accident occurs in *or at* a mine, causing loss of life or *serious* bodily injury, the owner, agent or manager of the mine shall give such notice of the *explosion or* accident to such authorities, in such form, and within such time, as may be prescribed.

[Cf. 50 & 51 Vict., c. 58, s. 45.]

Power for the Government to order formal inquiry into accidents.

19. (*1*) When in any mine an *explosion or other* accident has *occurred if it appears to the* Governor General in Council or the Local Government that a formal inquiry into the causes of, and circumstances attending, the accident *ought to* be held, *the Governor General in Council or the Local Government may give directions accordingly*, and may appoint a competent person to hold the inquiry, and may also appoint any person or persons possessing legal or special knowledge to act as assessor or assessors in holding the inquiry.

(*2*) The person or persons so appointed shall have all the powers of a Civil Court for the purpose of enforcing the attendance of witnesses and compelling the production of documents; and every person required by such person or persons as aforesaid to furnish any information shall be deemed to be legally bound to do so within the meaning of section 176 of the Indian Penal Code.

XLV of 1860.

(*3*) *The person or persons holding an inquiry under this section may exercise such of the powers of an Inspector of Mines as he or they may think it necessary or expedient to exercise for the purposes of such inquiry.*

(*4*) The person or persons holding an inquiry under this section shall make a report to the Local Government, stating the causes of the accident and its circumstances, and adding any observations which he or they may think fit to make.

Publication of reports.

20. The Local Government may cause any report submitted under section 16 or section 19 to be published at such time and in such manner as it may think fit.

[Cf. 50 & 51 Vict., c. 58, s. 46.]

Rules.

Power for Government to make rules.

21. (*1*) The Governor General in Council may, for the whole or any part of British India, and each Local Government, with the previous sanction of the Governor General in Council, may, for the whole or any part of the Province, by notification in the Gazette of India or the local official Gazette, as the case may be, make rules for carrying out the purposes and objects of this Act in respect of all mines or any classes of mines.

(*2*) In particular and without prejudice to the generality of the foregoing power, such rules may—

(*a*) regulate the duties and powers *of the Chief Inspector and* of Inspectors of Mines in respect of the inspection of mines under this Act; *and provide for appeals from the orders of the Chief Inspector and Inspectors of Mines*;

(*b*) prescribe the duties of owners, agents and managers of mines and of all persons acting under them;

(*c*) prescribe the qualifications of managers and of all persons acting under them;

(*d*) regulate the manner of ascertaining, by examination or otherwise, the qualifications of managers and persons acting under them, and the granting and renewal of certificates of competency;

(*e*) fix the fees (if any) to be paid in respect of such examinations and the grant and renewal of certificates as aforesaid;

(*f*) provide for the making of inquiries into charges of misconduct or incompetency on the part of managers and persons acting under them, and for the suspension and cancellation of certificates of competency;

(*g*) prescribe the matters in respect of which notices, returns and reports shall be furnished by owners, agents and managers, the forms of such notices, returns and reports, *the persons and authorities to whom they are to be furnished* and the particulars to be contained in them;

(*h*) prescribe the plans (if any) to be kept by owners, agents and managers, and the manner and places in which they are to be kept for purposes of record;

IV of 1884.

(*i*) regulate, subject to the provisions of the Indian Explosives Act, 1884, and the rules thereunder, the storage and use of explosives;

(*j*) regulate the *constitution of committees under section 16 and the* procedure to be observed in *all* inquiries held under this Act;

(*k*) provide for the safety of the persons employed in mines, their means of entrance thereinto and exit therefrom, the number of shafts or outlets to be furnished, the fencing of *shafts*, outlets and passages, and the care of all machinery;

(*l*) provide for the water-supply, sanitation and conservancy of mines;

(*m*) provide for the safety of the roads and working-places in mines;

(*n*) provide for the ventilation of mines and the action to be taken in respect of noxious gases;

(*o*) require and regulate the use of safety lamps in mines;

(*p*) provide against the accumulation of water in mines;

(*q*) regulate the procedure on the occurrence of accidents in mines and the supply of medical appliances and comforts for the benefit of persons injured therein;

(*r*) provide for the safety of the public and *for* the protection of *the* public from injury in respect of any mine, *or part of a mine*, whether the mine is being worked or not;

(*s*) *provide for the protection of public property and works from injury in respect of any mine which is not being worked; and*

XI of 1890.

(*t*) *prescribe the notice to be given by the owner, agent or manager of a mine before extending any mining operations under his control at or to any point within fifty yards of any railway subject to the provisions of the Indian Railways Act, 1890, or of any public works or classes of public works which the Local Government may, by general or special order, specify in this behalf.*

(3) The power to make rules conferred by this section is subject to the condition of the rules being made after previous publication.

X of 1897.

(4) *The date to be specified in accordance with clause (3) of section 23 of the General Clauses Act, 1897, as that after which a draft of rules proposed to be made under this section will be taken into consideration, shall not be less than three months from the date on which the draft of the proposed rules was published for general information.*

(5) All rules made under this section shall be published in the Gazette of India or in the local official Gazette, as the case may be, and, on such publication, shall have effect as if enacted in this Act.

Power for owners, etc., to make special rules.

[Cf. 50 & 51 Vict., c. 58, ss. 52-54.]

22. (1) The owner, agent or manager of a mine may frame and transmit to *the* Inspector of Mines *or, when there is no Inspector for the local area in which the mine is situate, to the Chief Inspector*, a draft of such special rules, not being inconsistent with this Act or any rules for the time being in force under section 11 or section 21, for the control and guidance of the persons acting in the management of, or employed in or about, the mine as he may deem necessary to prevent accidents and provide for the safety, convenience and discipline of the persons employed in or about the mine.

(2) *If any such owner, agent or manager—*

(*a*) *fails within a period of two months after the receipt of a notice from the Inspector or Chief Inspector to transmit a draft of such special rules as are referred to in sub-section (1), or*

(*b*) *submits a draft of such special rules as aforesaid, which is not in the opinion of the Inspector or Chief Inspector sufficient,*

the Inspector or Chief Inspector may either—

(*i*) *propose a draft of such special rules as appear to him to be sufficient, or*

(*ii*) *propose such amendments in the draft submitted to him by the owner, agent or manager as will, in his opinion, render them sufficient,*

and shall send such draft rules or draft amendments to the owner, agent or manager for consideration.

(3) *If within a period of two months from the date on which any draft rules or draft amendments are sent by the Inspector or Chief Inspector to the owner, agent or manager of a mine under the provisions of sub-section (2), the Inspector or Chief Inspector and the owner, agent or manager are unable to agree as to the terms of the special rules to be made under sub-section (1) or as to the terms of any of such rules, the said Inspector or Chief Inspector shall refer the draft rules for settlement to such officer or authority as the Local Government may, by general or special order, appoint in this behalf.*

(4) *A copy of the draft rules as agreed to by the owner, agent or manager and the Inspector*

or Chief Inspector, or, when they are unable to agree, as settled by such officer or authority as aforesaid, shall, together with a notice intimating that any objection or suggestion in respect thereof may be submitted in writing by any person employed in the mine to the said Inspector or Chief Inspector for consideration, be posted up *for not less than thirty days* in legible characters *in English and in the vernacular of the district* in some conspicuous place in the mine for the information of the persons employed therein, and a certificate to the effect that this has been done *signed by the owner, agent or manager of the mine* shall be transmitted to the said Inspector *or Chief Inspector,* together with two copies of the draft *rules.*

(*5*) *When the publication required by sub-section* (*4*) *has been carried out, the Inspector or Chief Inspector* shall forward *a copy of the draft rules so published,* together with a copy of any objections or suggestions in respect thereof received by him *to the Local Government for approval.*

(*6*) The special rules, when approved by the Local Government, with such modifications (if any) as it may think fit, shall be published in like manner as is provided in sub-section (*4*) respecting the publication of the draft, and, on such publication, shall have effect as if enacted in this Act:

Provided that the Local Government may at any time, by order in writing, which shall be published in like manner as aforesaid, rescind, in whole or in part, any rules so made, and that thereupon such rules shall cease to have effect accordingly.

Penalties.

23. (*1*) Whoever—

Penalties for offences.

(*a*) obstructs *the Chief Inspector or* an Inspector of Mines in the discharge of his duties under this Act, or refuses or neglects to furnish him with the means necessary for making any entry, inspection, examination or inquiry thereunder in relation to any mine; or

(*b*) counterfeits, or knowingly makes a false statement in, any certificate or in any official copy of a certificate granted under this Act; or

(*c*) knowingly uses as true any such counterfeit or false certificate; or

(*d*) makes or produces or uses any false declaration, statement or evidence for the purpose of obtaining, for himself or for any other person, a certificate or the renewal of a certificate, or any employment under this Act; or

(*e*) contravenes any provision of this Act or *any rule or order thereunder* for the breach of which no penalty is otherwise provided, where the act done has resulted in loss of life or serious bodily injury to any person;

shall be punishable with imprisonment for a term which may extend to three months, or with fine which may extend to five hundred rupees, or with both.

(*2*) Whoever—

(*a*) alters or falsifies any plan or register or record required to be maintained by *or under* this Act; or,

(*b*) being the owner, agent or manager of a mine, omits to give *the prescribed* notice of an accident in the mine or to *make or* furnish any prescribed *plans or* returns; or

(*c*) makes, *gives* or delivers any such *plan, register, record, notice* or return containing a statement, *entry or detail* which is not, to the best of his knowledge or belief, true;

shall be punishable with fine which may extend to five hundred rupees.

(*3*) Whoever—

(*a*) employs or allows to be employed in or about a mine, or allows to enter a mine or part of a mine, any person in contravention of *any provision of* this Act or *of any rule or order thereunder*; or

(*b*) allows any child or woman to perform any work forbidden by, or to work in contravention of, *any such provision*; or

(*c*) fails to comply with any requisition or order made under *any such provision*; or

(*d*) being the owner, agent or manager of a mine, fails to maintain correctly, or to produce, any prescribed plan; or

(*e*) contravenes any provision of this Act *or any rule or order thereunder* for the breach of which no penalty is otherwise provided;

shall be punishable with fine which may extend to two hundred rupees, and, in the case of a continuing breach under clause (*c*) of this sub-section, with a further fine which may extend to fifty rupees for every day during which the breach is proved to have been persisted in after the date of the receipt by him of the order or requisition referred to in such clause.

Miscellaneous.

24. No prosecution shall be instituted against any owner, agent, manager or assistant manager for any offence against this Act or any rule or order thereunder except at the instance of the Chief Inspector or an Inspector of Mines.

Prosecution of owner, agent, manager or assistant manager.

25. No Court shall take cognizance of any offence against this Act *or any rule or order thereunder* unless complaint thereof is made within six months of the date

Limitation of prosecutions.

on which the offence is alleged to have been committed.

Cognizance of offences.

26. No Court inferior to that of a Magistrate of the first class or Sub-divisional Magistrate shall try any offence against this Act or any *rule or* order thereunder *which is alleged to have been committed by any owner, agent, manager or assistant manager of a mine or any offence which is punishable with imprisonment.*

Reference to Committee in lieu of prosecution in certain cases.

27. If the Court trying any case instituted on the complaint of *the Chief Inspector or* an Inspector of Mines under this Act is of opinion that the case is one which should, in lieu of a prosecution, be referred to a Committee, it may stay *the* criminal proceedings, and report the matter to the officer or authority appointed by the Local Government under section 15, sub-section (*1*), and such officer or authority may thereupon refer it to a Committee to be dealt with in the manner provided by the said section and section 16.

[Cf. 50 & 51 Vict., c. 58, s. 71.]

Decision of question whether a mine is under this Act.

28. If any question arises as to whether any *excavation or working* is a mine within the meaning of this Act, the Local Government may decide the question, and a certificate, signed by a Secretary to the Local Government, shall be conclusive on the point.

Power to exempt from operation of Act.

29. The Governor General in Council may, by notification in the Gazette of India, *and subject to such limitations and conditions as may seem to him expedient,* exempt from the operation of the whole or any part of this Act any local area, or any mine or class of mines, or any per son or class of persons.

Power of Government of India to alter or rescind orders.

30. The Governor General in Council or any Local Government shall have authority to reverse or modify any order passed under this Act by any authority subject to his or its control.

Application of Act to Crown mines.

31. This Act shall apply to mines belonging to the Crown. [Cf. XV of 1881, s. 19.]

Temporary Provision.

Postponement of operation of sections 9, sub-section (1), 10 and 15.

32. *The provisions of section 9, sub-section (1), and of sections 10 and 15, shall not come into force until the expiry of six months from the commencement of this Act.*

Bar of prosecutions for certain offences committed within one year of commencement of Act.

33. *No Court shall take cognizance of any offence punishable under section 23, sub-section (1), clause (c), or sub-section (3), which is alleged to have been committed by any person within one year from the commencement of this Act.*

J. M. MACPHERSON,

Secretary to the Government of India.

MILITARY DEPARTMENT.

NOTIFICATION.

Calcutta, the 2nd March, 1900.

Corps.	Rank and Names.	Date of Decease.	Place of Decease.	Testate or Intestate.	REMARKS.
Public Works Department, (Madras).	Honorary Lieutenant A. C. Lord.	21st February, 1900.	Madras .	...	...
Indian Staff Corps (16th Bengal Cavalry).	Major L. J. Howell . .	22nd February, 1900.	Lahore .	...	...

P. J. MAITLAND, *Major-General*.
Secretary to the Government of India.

PUBLIC WORKS DEPARTMENT.

NOTIFICATIONS.

Calcutta, the 24th February 1900.

No. 72.—Mr. A. R. Walsh, Executive Engineer, 3rd grade, State Railways, is appointed Deputy Consulting Engineer to the Government of India for Railways, Lucknow, until further orders.

The 26th February 1900.

No. 73.—With reference to Public Works Department Notification No. 486, dated 16th November 1899, it is hereby notified that the examination qualifying for admission to the Superior Accounts Branch of the Public Works Department will be held this year from the 21st to the 29th June.

The 27th February 1900.

No. 74.—In exercise of the powers conferred by section 135 of the Indian Railways Act, IX of 1890, the Governor General in Council is pleased—

(*a*) under clause (*1*) of that section to declare that the Administration of the North Western Railway shall be liable to pay, in aid of the funds of the Sukkur Municipality, a house and property tax, under the provisions of section XXI of Bombay Act VI of 1873, in respect of the station and railway premises occupied by the Railway Administration within the limits of the Sukkur Municipality.

(*b*) under clause (*2*) of that section to appoint the Commissioner in Sind to determine the amount, if any, which, having regard to all the circumstances of the case, may be considered fair and reasonable to be recovered from the North Western Railway Administration in lieu of the said house and property tax.

No. 75.—In exercise of the powers conferred by section 135 of the Indian Railways Act, IX of 1890, the Governor General in Council is pleased—

(*a*) under clause (*1*) of that section to declare that the Bombay, Baroda and Central India Railway Company shall be liable to pay, in aid of the funds of the Viramgam Municipality, a house and property tax and conservancy cess, under the provisions of section XXI of Bombay Act VI of 1873, in respect of the station and railway premises occupied by the Railway Company within the limits of the Viramgam Municipality.

(*b*) under clause (*2*) of that section to appoint the Commissioner of the Northern Division of the Bombay Presidency to determine the amount, if any, which, having regard to all the circumstances of the case, may be considered fair and reasonable to be recovered from the Bombay, Baroda and Central India Railway Company in lieu of the said house and property tax and conservancy cess.

The 28th February 1900.

No. 80.—Mr. L. C. D. Bean, District Traffic Superintendent in class II, grade 2, of the Superior Revenue Establishment of State Railways, is appointed to officiate as Deputy Traffic Superintendent, North Western Railway, in class I of that Establishment, *vice* Mr. C. J. Keene, appointed to officiate as Traffic Superintendent, East Coast Railway, and until further orders.

The 2nd March 1900.

No. 82.—Public Works Department Notification No. 63, dated 21st February 1900, is cancelled.

No. 83.—Mr. J. A. Ryan, Government Examiner of Accounts, Indian Midland Railway, is appointed Government Examiner of Accounts, Burma Railways.

No. 84.—Mr. J. M. Hartley, Deputy Examiner of Accounts, attached to the office of the Examiner, Telegraph Accounts, is appointed to the charge of the office of the Government Examiner of Accounts, Indian Midland Railway.

No. 86.—The Governor General in Council is pleased to sanction, under section 16 (*1*) of the Indian Railways Act, IX of 1890, the use of locomotive engines and of rolling stock to be drawn or propelled thereby, on the Pandra Branch of the Jherria extension of the East Indian Railway.

No. 85.—The following is published for general information :—

No. 221 R. T.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—RAILWAY TRAFFIC.

Calcutta, the 26th February 1900.

READ—

Sections 3 (4), 16 (2), 47 and 148 (1) of the Indian Railways Act (IX) of 1890.

Government of India, Public Works Department, notification No. 480½, dated the 30th October 1890, and the Government of India resolution No. 736 R. T., dated the 17th October 1890, published thereunder.

Memorandum from the Consulting Engineer to the Government of India for Railways, Calcutta, No. 705, dated the 8th February 1900, forwarding letter from the Agent, East Indian Railway Company, No. 150 G., dated the 3rd February 1900.

OBSERVATIONS.—The Agent of the East Indian Railway Company has applied for leave to adopt the General Rules for working railways under construction and not used for the public carriage of passengers, animals, or goods, which rules were published in the *Gazette of India* of the 8th November 1890 under Public Works Department notification No. 480½, dated the 30th October 1890, on the Pandra branch of the Jherria extension of that railway.

RESOLUTION.—The Governor General in Council is pleased to sanction the application of the General Rules which are referred to in the foregoing observations to the Pandra branch of the Jherria extension of the East Indian railway which has been sanctioned for construction.

ORDER.—Ordered that the General Rules, which have already been published in the *Gazette of India* of the 8th November 1890, be further notified

to the railway servants and to the public by a copy thereof being kept open to inspection free of any charge in the office of the engineer in charge of the construction of the railway.

Ordered, also, that this resolution be communicated to the Consulting Engineer to the Government of India for Railways, Calcutta, for information and guidance, and that it be published under a notification in Part I of the *Gazette of India.*

No. 87.—The following is published for general information :—

No. 222 R. T.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—RAILWAY TRAFFIC.

Calcutta, the 26th February 1900.

General Rules of 1895 for working railways open for traffic.

READ—

Section 47 of the Indian Railways Act, 1890.

Government of India, Public Works Department, notification No. 118, dated the 21st March 1895, and the Government of India circular No. 6 Railway, dated the 12th March 1895, published thereunder.

Government of India, Public Works Department, notification No. 257, dated the 28th May 1896, and the Government of India circular No. 3 Railway, dated the 22nd May 1896, published thereunder.

Government of India, Public Works Department, notification No. 29, dated the 25th January 1900, and the Government of India circular No. IV Railway, dated the 19th January 1900, published thereunder.

Memorandum from the Consulting Engineer to the Government of India for Railways, Calcutta, No. 705, dated the 8th February 1900, forwarding letter from the Agent, East Indian Railway Company, No. 150 G., dated the 3rd February 1900.

OBSERVATIONS.—The Agent of the East Indian Railway Company has applied that the General Rules for working open lines of railway in British India, which have been published under the Government of India, Public Works Department, notification No. 118, dated the 21st March 1895 (*vide* the *Gazette of India* of the 23rd March 1895), as modified by the Government of India circulars Nos. 3 Railway, dated the 22nd May 1896, 3 Railway, dated the 3rd February 1897, 12 Railway, dated the 9th December 1897, I Railway, dated the 3rd March 1898, III Railway, dated the 15th March 1898, I Railway, dated the 26th April 1899, V Railway, dated the 3rd July 1899, X Railway, dated the 1st December 1899, and IV Railway, dated the 19th January 1900, which were published under Public Works Department notifications Nos. 257, dated the 28th May 1896, 55, dated the 5th February 1897, 3, dated the 5th January 1898, 104, dated the 10th March 1898, 134, dated the 23rd March 1898, 197, dated the 5th May 1899, 298, dated the 14th July 1899, 517, dated the 7th December 1899, and 29, dated the 25th January 1900 (*vide* the *Gazette of India* of the 30th May 1896, 6th February 1897, 8th January 1898, 12th March 1898, 26th March 1898, 6th May 1899, 15th July 1899, 9th December 1899, and 27th January 1900), may be made applicable to the Pandra branch of the Jherria extension of that railway.

RESOLUTION.—The Governor General in Council is pleased to sanction the application of the General Rules for working railways open for traffic which may, for the time being and hereafter from time to time, be in force on the East Indian railway, to the Pandra branch of the Jherria extension of that railway, with effect from the date or dates on which the said branch or portions thereof may be opened for the public carriage of passengers, animals or goods.

ORDER.—Ordered that this resolution be published under a notification in Part I of the *Gazette of India*, as required by section 47, sub-section (*3*), of the Indian Railways Act, 1890; also that the General Rules cited in the foregoing observations—which have already been published in the *Gazette of India*—be kept at railway stations as directed by sub-section (*6*) of the same section.

Ordered, also, that this resolution be communicated to the Consulting Engineer to the Government of India for Railways, Calcutta, for information and guidance.

F. R. UPCOTT,
Secretary to the Government of India,
Public Works Department, Railways.

The 1st March 1900.

No. 81.—The following is published for general information :—

No. 293 G.

GOVERNMENT OF INDIA—PUBLIC WORKS DEPARTMENT—GENERAL.

Re-organization of the administrative classes in the Public Works Department.

Calcutta, the 1st March 1900.

READ—

- Despatch from Secretary of State, No. 29 P. W., dated 14th October 1897, paragraphs 17 and 18.
- Despatch to Secretary of State, No. 11 P. W., dated 24th March 1898.
- Despatch from Secretary of State, No. 21 P. W., dated 7th July 1898.
- Despatch to Secretary of State, No. 27 P. W., dated 14th September 1899.
- Despatch from Secretary of State, No. 53 P. W., dated 14th December 1899.

RESOLUTION.—The Government of India have had under consideration the question of re-organizing the administrative appointments in the Public Works

Department comprising the several classes of Chief and Superintending Engineers.

The rate of pay in these classes has undergone no change since 1870, while that of Executive and Assistant Engineers has been somewhat frequently changed. The last change was in 1893 when the rate of pay of Executive Engineers, 1st grade, was raised to Rs. 1,000, and, with increments, to Rs. 1,100 a month.

Some inconvenience has arisen from the approximation of the pay of Executive Engineers, 1st grade, to that of Superintending Engineers, 3rd class, and it has also been felt that the pay of the latter class was to some extent inadequate to the responsibilities of their duties.

The appointments of Chief Engineers and Superintending Engineers for the several Provincial lists under the Government of India, which comprise the appointments of the Buildings and Roads Branches, and of the Railway Branch, have hitherto formed one list. The promotions to the lowest or 3rd class in each of the ranks of Chief and Superintending Engineers have, like the appointments in the Executive and Assistant classes, been on the separate lists noted in the margin, but promotions to the 2nd and 1st classes of these ranks have been made on a combined list.

Bengal.
North-Western Provinces and Oudh.
Punjab.
Burma.
Minor Administrations.
State Railways.

2. Public Works Department resolution No. 3386 G., dated 23rd December 1897, provided for a re-organization of the Public Works Department Secretariat of the Government of India based on the idea of separating the Department into two Branches, the Railway, and the Irrigation Roads and Buildings, each under its own Secretary. It has now been decided to complete the separation of the two Branches by placing the Chief and Superintending Engineers in each Branch on separate lists.

It has not been possible hitherto to effect this complete separation under the existing rules for determining the strength in each class of Chief and Superintending Engineers, and so long as the sanctioned number of appointments in the 1st class of Chief Engineers has been limited to three. Hitherto these three 1st class appointments have been held by the three Chief Engineers on the combined list whose personal qualifications were highest, without reference to the Branch in which they were serving, a Chief Engineer in the Railways being as eligible as one in the Irrigation Roads and Buildings for promotion to these 1st class appointments. It has now been decided, with the approval of the Secretary of State, to reserve the three existing 1st class appointments exclusively for officers in the latter, and His Lordship has also sanctioned the creation of two additional 1st class appointments in this Branch, a corresponding reduction being made in the combined strength of the 2nd and 3rd classes. This increase in the number of 1st class appointments to be reserved for this Branch, has been sanctioned in recognition of the increased importance of the Province of Burma, which now forms a Local Government, and of the fact that, under the recent organization of the Secretariat, Officers in the Buildings and Roads will no longer share the chance which they had previously enjoyed with officers of other Branches, of promotion to the post hitherto known by the title of Secretary to the Government of India in the Public Works Department, while officers of the Irrigation Branch will also be eligible only for the appointment of Secretary, Irrigation Roads and Buildings, which must be filled by the Inspector General of Irrigation.

3. In order to compensate the Railways for the reservation of the three existing 1st class appointments for the officers of the Irrigation Roads and Buildings the Secretary of State has also sanctioned a proposal that one of the four Chief Engineer appointments in the Railways should be in the 1st class. There will also be, as at present, two other appointments, outside this scale, ranking as Chief Engineer, 1st class, which will be open only to Engineers of the Railways, and two other appointments of the same rank and pay in the Superior Revenue Establishment of State Railways, which are open to Railway Engineers as well as to officers of the Superior Revenue Establishment.

4. Six of the twelve Chief Engineer appointments belonging to the two lists, Railway, and Irrigation Roads and Buildings, under the Government of India, will thus, in future, belong to the 1st class, and there will be three appointments

in each of the other two classes. The Railways will have two appointments in the 2nd class and one in the 3rd, while the Irrigation Roads and Buildings will have one in the 2nd and two in the 3rd class. In the event of future additions to or deductions from the 2nd and 3rd class appointments, the numbers will be recalculated under Public Works Department Code, Volume I, Chapter I, paragraph 57. The arrangement agreed to in Public Works Department resolution No. 1194G., dated 6th September 1883, in reference to the Bombay list by which the appointment of Chief Engineer, 2nd class, goes to the senior officer of the two lists, when a vacancy occurs, will continue to apply as between the Bombay list and the list of the Irrigation Buildings and Roads Branch under the Government of India. The promotions admissible under these orders will be notified in due course.

No modification is proposed in the sanctioned scales for Chief Engineers in the Madras and Bombay Presidencies, in each of which a 1st class appointment has always been reserved.

5. As regards the strength of the various classes of Superintending Engineers, the distribution has hitherto been effected, in accordance with the rule prescribed in Public Works Department Code, Volume I, Chapter I, paragraph 58, on the total strength of Superintending Engineers on the Government of India list, that is on that of the combined Branches. In future the distribution will be made separately for each of these Branches. The total number of Superintending Engineer appointments will vary from time to time in accordance with requirements. Under the existing sanction the distribution between the two Branches of the graded administrative appointments of Chief and Superintending Engineer under the Government of India will be as in margin.

	Irrigation, Roads and Bldgs.	Railways.	Total.
Chief Engineers, 1st class	5	1	6
" " 2nd "	1	2	3
" " 3rd "	2	1	3
Superintending Engineers, 1st class	10	5	15
" " 2nd "	10	4	14
" " 3rd "	9	4	13

6. The official designations of the heads of the Railway and General Branches will be respectively :—

Secretary to Government of India, Public Works Department, Railways.

Secretary to Government of India, Public Works Department, Irrigation Roads and Buildings.

7. As regards the rate of pay drawn by Superintending Engineers the Secretary of State has sanctioned the pay of the 3rd class being increased from Rs. 1,100 to Rs. 1,250, and that of the 2nd class from Rs. 1,350 to Rs. 1,400. This sanction will have effect from the 1st January 1900 and will be applicable to all lists, including those of Madras and Bombay.

ORDER.—Ordered that this resolution be communicated to the Local Governments, Administrations and Officers noted in the margin.

The Governments of Madras and Bombay, Public Works Department, General and Railway Branches.
The Governments of Bengal, the North-Western Provinces and Oudh, and the Punjab, Public Works Department.
The Government of Burma, Public Works Department, General and Railway Branches
The Chief Commissioners of the Central Provinces, Assam and Coorg.
The Resident at Hyderabad.
The Agents to the Governor General for Rajputana, Central India and Baluchistan.
The Accountant General, Public Works Department.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Assam.
The Director General of Telegraphs.
The Managers, North Western, Oudh and Rohilkhand, East Coast and Eastern Bengal State railways.
The Engineers-in-Chief, Hardwar-Dehra, Ludhiana-Dhuri-Jakhal and Ghaziabad-Moradabad railways.
The Engineers-in-Chief, Godavery and Indus Bridge Works.
The Engineers-in-Chief, Allahabad-Fyzabad, Khandwa-Akola-Basim and Bara-Ajmere-Marwara Railway Surveys.
The Port Storekeeper, State Railway Department, Calcutta.

Also that it be published in the *Gazette of India.*

F. R. UPCOTT,
Secretary to the Government of India, Public Works Department, Railways.

T. HIGHAM,
Secretary to the Government of India, Public Works Department, Irrigation Roads and Buildings.

No. 94 of 1900.—Isaiah William Richards, master mariner, residing at No. 1, Hartford lane, Calcutta. *An improved hose coupling, to be called "Captain Richards" patent instantaneous hose coupling."*

No. 975 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Madras, Bombay, and Burma, and the Director of the Department of Land Records and Agriculture, North-Western Provinces and Oudh. These and other specifications are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 104 of 1899.—Arthur Kitson, civil engineer, of Philadelphia, in the county and state of Pennsylvania, U. S. A. *Improvements in and relating to vapor burning apparatus.* (Specification filed 30 October 1899.)

No. 129 of 1899.—Charles Joseph Bertrand, engine driver, G. I. P. Railway, Igatpuri, Bombay Presidency. "*Bertrand's rail joint nut check.* (Specification filed 10 February 1900.)

No. 224 of 1899.—William Martin, retired indigo planter, residing at Agra. *An improved double roller cotton gin suitable for India.* (Specification filed 5 March 1900.)

No. 252 of 1899.—John Thomas Reid, dyer and calico printer, of Caledonian Works, Whit Lane, Pendleton, near Manchester, in the county of Lancaster, England, and Henry Thorp, foreman dyer, of the same address. *Improvements in dyeing textile fibres, yarns and fabrics.* (Specification filed 15 February 1900.)

No. 277 of 1899.—The Badische Anilin and Soda Fabrik, of Ludwigshafen-on-Rhine, in the German Empire. *Improvements in the manufacture of sulphuric anhydride.* (Specification filed 5 March 1900.)

No. 278 of 1899.—The Badische Anilin and Soda Fabrik, of Ludwigshafen-on-Rhine, in the German Empire. *Improvements in the manufacture of sulphuric anhydride.* (Specification filed 5 March 1900.)

No. 279 of 1899.—The Badische Anilin and Soda Fabrik, of Ludwigshafen-on-Rhine, in the German Empire. *Improvements in and apparatus for the manufacture of sulphuric anhydride.* (Specification filed 5 March 1900.)

No. 281 of 1899.—Alexander Bruce Stewart, mechanic, of Upper Hooghly mills, 9, Garden Reach, in the suburbs of Calcutta. *A new or improved bicycle stand* (Specification filed 5 March 1900.)

No. 283 of 1899.—Gerhard Ditmar, manufacturer, of 23, Erdbergstrasse, Vienna, Empire of Austria. *Improvements in storm lanterns.* (Specification filed 5 March 1900.)

No. 438 of 1899.—Pratapa Chandra Ghosha, Registrar of Assurances, Calcutta, residing at 26, Varanaci Ghosa's street, Calcutta. *An improved means for protecting Wenham patent and other similar gas lamps against hurricane and rain and for lighting the same by electricity.* (Specification filed 12 February 1900.)

No. 464 of 1899.—Frederick George Creed, telegraphist, of Bent view, Scott street, Hamilton, Lanarkshire, Scotland. *Improvements in and relating to telegraphic transmitting apparatus.* (Specification filed 6 March 1900.)

No. 976 P.—THE fees prescribed in the fourth schedule to the Inventions and Designs Act of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 134 of 1888.—Frederick Robert Jones. *Improvements in vertical sugarcane mills.* (From 23rd March 1900 to 23 March 1901.)

No. 152 of 1888.—Ernest Hulburd. *Improvements in and relating to metallic packing.* (From 6 March 1900 to 6 March 1901.)

No. 145 of 1891.—Hahnemann Adolphus Cutmore. *A new or improved switch to be used for a system of two or more speaking tubes.* (From 31 March 1900 to 31 March 1901.)

No. 326 of 1892.—Charles Hodson. *Improvements in apparatus for working railway points and signals.* (From 14 April 1900 to 14 April 1901.)

No. 13 of 1893.—William Bull. *An improvement in the burning of bricks and tiles.* (From 13 March 1900 to 13 March 1901.)

No. 313 of 1893.—William Bull. *An improved method of working continuous kilns for burning bricks and tiles by means of a single movable chimney.* (From 9 April 1900 to 9 April 1901)

No. 6 of 1894.—Charles Hodson. *An improvement in apparatus for working railway points and signals.* (From 7 April 1900 to 7 April 1901.)

No. 132 of 1894.—William Henry Casebourne. *A process of manufacturing pipes, junctions, bends and other things from dry or other powdered Portland, Roman and other artificial and natural cements.* (From 31 October 1900 to 31 October 1901.)

No. 32 of 1895.—Charles Weygang. *Manufacture of suponaceous products from petroleum.* (From 2 April 1900 to 2 April 1901.)

No. 33 of 1895.—Charles Weygang. *Manufacture of artificial fuel from petroleum.* (From 2 April 1900 to 2 April 1901.)

No. 977 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay, within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act of 1888, the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2), of the said Act, the exclusive privilege of making, selling and using the said inventions in British India, and of authorising others so to do, has ceased :—

No. 317 of 1894.—The mining and dredging power company. *A new or improved steam vacuum pump.* (Specification filed 26 November 1895.)

No. 320 of 1894.—The mining and dredging power company. *An improved dredging apparatus.* (Specification filed 26 November 1895.)

No. 42 of 1895.—George T. Altham. *A new and improved fuel and the process of making the same.* (Specification filed 26 November 1895.)

No. 93 of 1895.—George Washington Washburn. *Methods of and machines for cleaning and delinting cotton seeds.* (Specification filed 26 November 1895.)

No. 130 of 1895.—John Banbury. *An improved method of making cans, drums, holloware and the like.* (Specification filed 28 November 1895.)

No. 170 of 1895.—Maunsel Caswell Bannister. *Improvements in or connected with means for insulating hot or cold chambers or vessels.* (Specification filed 28 November 1895.)

No. 175 of 1895.—John Anschau *Improvements in seal locks and in seals therefor.* (Specification filed 28 November 1895.)

No. 176 of 1895.—Hakon Sigvart Larsen. *Improvements in machines for cutting and grinding corks.* (Specification filed 28 November 1895.)

No. 240 of 1895.—Edward Bulteel and Henry Joseph Kersting Green. *Improvements in tea leaf $\frac{\text{and}}{\text{or}}$ other withering racks.* (Specification filed 3 December 1895.)

Fee in respect of the continuance of an exclusive privilege—

4 (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof—

The sum of R50 for each of the above inventions.

No. 48 of 1894.—Leslie Rogers. *D. D. M. R. Bivouac Tent.* (Specification filed 26 November 1894.)

No. 298 of 1894.—Frederic Eliot Duckham. *Improvements in pneumatic apparatus for conveying and depositing grain and other granular or other pulverulent matters.* (Specification filed 1 December 1894.)

No. 299 of 1894.—Frederic Eliot Duckham. *Improvements in the method of and means for elevating and conveying grain and other matters in bulk by pneumatic agency.* (Specification filed 1 December 1894.)

Fee in respect of the continuance of an exclusive privilege—

4 (*b*) After the expiration of the fourth year and before the expiration of the fifth year from the date of the filing of the specification.

The sum of R50 for each of the above inventions.

No. 100 of 1893.—Muhammed Nadimullah Ghatalah. *A smoking hukka with the aid of a lamp or candle light briefly designated "Ghatalah's patent lamp hukka."* (Specification filed 24 November 1893.)

Fee in respect of the continuance of an exclusive privilege—

4 (*c*) After the expiration of the fifth year and before the expiration of the sixth year from the date of the filing of the specification—

The sum of R50 for the above invention.

No. 114 of 1889.—Sydney Lawrence. *An optician's apparatus for testing defective vision with accuracy by day or by night.* (Specification filed 29 November 1889.)

Fee in respect of the continuance of an exclusive privilege—

4 (*g*) After the expiration of the ninth year and before the expiration of the tenth year from the date of the filing of the specification —

The sum of R100 for the above invention.

NOTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be addressed to the "Secretary to the Government of India, Department of Revenue and Agriculture (PATENTS BRANCH), CALCUTTA."

The Office of the Secretary under the Act is open for the transaction of business from 11 A.M. to 4 P.M. on all days except Sundays and gazetted holidays.

The Government of India are advised that, as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash and applicants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's office are now on sale to the public at one anna and eight annas a copy, respectively.

Attention is requested to the rules made by the Government on the 10th October, 1895, in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1895) lie in the visitor's room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified ; or, if the tenth day is a holiday, till the evening of the office day next following.

At the time of delivering or sending an application for leave to file a specification, the applicant shall cause a duplicate copy of the application to be delivered or sent therewith to the Secretary.

S. C. HILL,

Offg. Secy. under the Inventions and Designs Act, 1888.

Application to be made to Curator.

CASH MUST ACCOMPANY ORDER. ARTICLES WILL BE SENT BY VALUE-PAYABLE POST TO PERSONS IN GOVERNMENT EMPLOYMENT ONLY.

It is advised that letters containing remittances be registered.

N.B.—The Revised Prices herein entered cover the cost of packing, postage, and other incidental charges (except commission for Value-payable supplies), and are for all purchasers other than resident College Students.

ROORKEE TREATISE ON CIVIL ENGINEERING IN INDIA.

Royal Octavo, with numerous Plates.

Volumes I and II are published in separate convenient sized Sections, as below, but can be bound up if required:—

VOLUME I.*

Section	I.	Building Materials (1898),	R2-0.
"	II.	Masonry (1898),	R1-4.
"	III.	Carpentry (1898),	R1-8.
"	IV.	Earthwork (1892),	R1-4.
"	V.	Tools and Plant (never published).	

VOLUME II.*

Section	VI.	Buildings (1899),	R1-4.
"	VII.	Bridges (1897),	R4-4.
"	VIII.	Roads (1897),	R1-8.
"	IX.	Railways (1891),	R1-4.
"	X.	Irrigation Works.	(Under revision.)

ROORKEE MANUAL OF APPLIED MECHANICS.

Vol. I. Direct and Transverse Strain, principally by Analytical Methods. R7

" II. The Stability of Structures, mostly by Graphic Methods (in the Press).

MANUALS.

VII. Surveying (by Major Firebrace, R.E.) (7th edition, with Curve Table). R3.

XIII. Drawing (by Lieut. R. Pulford, R.E.). † R6.

XIIIa. Drawing, First Principles of Geometrical (by do.) R1-4.

XIV. Simple Applied Mechanics, (3rd edition), Parts I and II in one. R1-8.

Simple Applied Mechanics, Part II (1st edition). 8a.

XV. Examples of Estimating. Comprising a progressive series of Estimates (with Plans of Buildings and Bridges, worked in detail). By P. Keay, Esq., and revised by C. C. Sullivan, Esq., Head Master (5th edition). R3-12.

XVI. Earthwork Estimating, with Practical Tables and Diagrams. By Major A. M. Brandreth, R.E. R1.

XVII. Specimens of Printing used in the College Drawing Course and Entrance Examinations. 6a.

Note.—The complete Treatise forms the course of the Civil Engineer and Upper Subordinate classes at the Thomason College in Civil Engineering. The other Manuals are the complete course for both Classes in the several subjects of which they treat.

MISCELLANEOUS.

ENGINEERING WORKS.

Curve Tables, complete, for laying any curve, 4a.

Scantlings of Timber for Roofs. Tables and investigation of formulæ for determining size of timbers for Flat Roofs from 8 to 22 feet span, and for Trussed Roofs from 16 to 50 feet span (2nd edition). By P. Keay, Esq., Head Master. 12a

Notes on Chemistry of Building Materials. R1-8.

Tate's Mechanism. R1.

Barman's Descriptive Mineralogy. R2-4.

* Date of Edition on sale.
Originally published at R15, reduced to R6.

Useful Rules and Tables relating to Measurement of Timber. Rules for computing the cubic contents of Round Logs, as well as of Sawn Timbers, with Tables, etc. By Rai Kunhya Lal. R2-8.

O'Callaghan's Earthwork Tables for India, in one large sheet, 12a.; mounted on cloth and bound. R1-12.

Tables for Computing Earthwork in Distributaries and small open Channels, in use in Irrigation Department, N.-W. Provinces. 12a.

Tyndall's Hand-Book of Specifications. (In the Press.)

The Indian Engineer's Pocket Book. R1.

Wooden Bridges and Designs. By Rai Kunhya Lal. (In the Press.)

Blasting under Water (2nd edition). 10a.

Waugh's Instructions for Topographical Surveying. R1.

Analysis of Lime and Cement Stones. By Murray Thomson, Esq., M.D., F.R.S.E. 6a.

Chart, giving by a graphic method the discharges of earthen channels up to 40 feet bed width, very useful for Projects. R1-6.

SCIENCE BOOKS.

Wilson's Inorganic Chemistry. R1-8.

MATHEMATICAL.

Belleau's Tables of Wages and Rent, and of the value of goods. Tables for converting Seers and Chittacks into decimals of a Maund, and Annas and Pies into decimals of a Rupee. With a few others of general utility (4th edition). R1-8.

Belleau's Tables of Log sin² ½ P (for computing time 4a.)

Cape's Logarithms, with Tables of Squares, Cubes etc. R1-4.

Cape's Geometry. R1-4.

Quarterly, Nos. 1, 2, 3, 4, and 5,
Vol. II, Quarterly, Nos. 0 and 7,
" VI, " No. 25, } 4a. each, inclusive of postage.
" VII, " Nos. 20, 27, 28, and 29,
Extra No., April 1870.

(SECOND SERIES.)

Quarterly Numbers of Vols. I, II, and IX of the series, 4a. each, inclusive of postage.
Quarterly Number 41A of Vol. X. Each 8a.
Cloth covers for Volumes of 1st and 2nd Series, at 8a. each.
Index to Professional Papers and loose Papers, 1st and 2nd Series, at 2a. each.

FERROTYPE PRINTING.

Chemicals and Lithographic Paper for this process can be purchased from Thomason College Book Depot. Application to be made to the Curator.
Apparatus for Printing can be made up at the Roorkee Workshops, and all particulars obtained from the Superintendent.

CIRCULARS.

Circulars containing the Rules of admission to the different classes of the College will be forwarded to applicants.

J. CLIBBORN, *Lieut.-Col., I.S.C.,*
Principal, Thomason Civil Engineering College, Roorkee.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.
The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.
In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1876 :—

Terms of subscription payable annually in advance.

For the Complete Series, *including postage* . . . R22-8

	Without postage. R a. p.	With postage. R a. p.
For the Calcutta Series	10 0 0	12 8 0
" each of the Madras, Bombay, and Allahabad Series	6 0 0	7 0 0
" a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...	2 0 0
" a part of each of the Madras, Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	...	1 0 0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit :—

	For town. R a. p.	For mofussil. R a. p.
For the Calcutta Series ; per copy	0 8 9	0 10 0
" each of the Madras, Bombay, and Allahabad Series ; per copy	0 5 3	0 5 9
" the Calcutta Series. For the year	7 2 6	8 6 3
" each of the Madras, Bombay, and Allahabad Series. For the year	4 4 6	4 11 0

Persons desiring to subscribe for, or purchase, the Report should apply to—
Superintendent, Government Press, Madras.
The Superintendent, Government Central Press, Bombay.
The Curator of Government Books, North-Western Provinces and Oudh.
The Officer in charge, Bengal Secretariat Book Depôt.
Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrapper of the Indian Law Reports, Calcutta Series, at the following rates payable in advance :—

	One page.	*Half page.*	*Quarter page.*
For one issue	R 20	R 14	R 9
" three issues	" 55	" 36	" 24
" six "	" 100	" 68	" 45
" nine "	" 145	" 96	" 64
" twelve "	" 180	" 120	" 80

Several volumes of the BENGAL LAW REPORTS, from August 1868 to December 1875, and FULL BENCH RULINGS, Parts I and II, are available at the following rates :—

	Without postage. R a. p.	With postage. R a. p.
Bengal Law Reports, for one year	20 0 0	22 8 0
Single copies, R2 per copy.		
Full Bench Rulings, Parts I and II	20 0 0	22 8 3

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta. Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription R22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calender year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

PURE SULPHATE OF QUININE.

Manufactured at the Bengal Government Cinchona Plantation.

From 1st April, 1898, the price of this Quinine will be as follows :—

1-pound tin,	R17,	or, post-free,	R17-12.
½	„	R8-8,	„	R9-0.
¼	„	R4-4,	„	R4-12.

Analysis shows this Quinine to be of the purest manufacture; and it is guaranteed to be free from wilful mixture with the inferior alkaloids, Cinchonine and Cinchonidine. It is for sale only to Government officers, and only for cash, and may be had from the Superintendent, Botanic Garden, Seebpore, near Calcutta.

বঙ্গদেশের গবর্ণমেণ্টের সিন্‌কোনা আবাদে প্রস্তুত বিশুদ্ধ কুইনাইন।

১৮৯৮ সালের ১লা এপ্রেল হইতে এই কুইনাইনের নিম্নলিখিত মূল্য হইবে, যথা—

১ এক পৌণ্ড টিন		১৭, বা ডাকমাশুল বিনা		১৭৸৹
॥ আধ „	„	৮।৹	„	৯,
। শিকি „	„	৪।৹	„	৪৸৹

পরীক্ষা করিয়া দেখা গিয়াছে যে এই কুইনাইন অতি বিশুদ্ধ রূপে প্রস্তুত করা হইয়াছে, এবং ইহা যে সিন্‌কোনাইন ও সিন্‌কোনিডাইন নামক অপকৃষ্ট ক্ষারের সহিত ইচ্ছা পূর্ব্বক মিশান হয় নাই তাহার গারাণ্টী দেওয়া যাইতেছে। ইহা নগদ মূল্যে কেবল গবর্ণমেণ্টের কর্ম্মচারীগণের নিকট বিক্রয় করা যাইবে, এবং কলিকাতার নিকট শিবপুরের কোম্পানির বাগানের স্থপারিণ্টেণ্ডেণ্টের নিকট পাওয়া যাইতে পারে।

PART V.

Bills introduced in the Council of the Governor General of India for making Laws and Regulations, Reports of Select Committees presented to the Council, and Bills published under Rule 23.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following preliminary Report of the Select Committee on the Bill to make better provision for the Registration of British Ships in British India was presented to the Council of the Governor General of India for the purpose of making Laws and Regulations on the 16th March, 1900:—

WE, the undersigned, members of the Select Committee to which the Bill to make better provision for the Registration of British Ships in British India was referred, have considered the Bill and the papers noted in the margin, and have now the honour to submit this our preliminary Report.

From High Court, Calcutta, No. 2274, dated 25th August, 1899 [Paper No. 1].
From Government, Burma, No. 133—4S.-31, dated 4th October, 1899 [Paper No. 2].
From Government, Madras, No. 931 Marine, dated 6th October, 1899, and enclosures [Papers No. 3].
From Government, Bombay, No. 235—G., dated 16th October, 1899, and enclosure [Papers No. 4].
From Government, Bengal, No. 182 Mne., dated 23rd January, 1900, and enclosures [Papers No. 5].

2. The object of the Bill is to provide for the registry or re-registry of ships belonging to British Indian ports under the provisions of the Merchant Shipping Act, 1894.

3. The Bill referred to us, raises a question with which we think it would not be expedient to deal until further information is before us. Some provisions of the Imperial Act, 1894, and especially the rules which prescribe the space to be set apart for the crew in merchant ships, are, in our opinion, unsuitable for application to ships manned chiefly by lascars, and trading in Eastern waters. The Governor General in Council is empowered by section 735 of the Act to repeal the provisions in question, in so far as they relate to ships registered in British India, but an Act passed here does not take effect until it is approved by Her Majesty, and we think it is better not to proceed with the Bill referred to us until it has been ascertained that the Board of Trade is prepared to advise that our legislation be approved.

4. The publication ordered by the Council has been made as follows:—

The Gazette of India.

No. 11.] CALCUTTA, SATURDAY, MARCH 17, 1900.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, March 3rd, 1900.

At the close of the previous week two depressions were shewn in North-West India, one Central in the Punjab, the other in East Rajputana. The former advanced eastward and had broken up in the Simla and Mussooree hills by Sunday morning. The latter had drifted into the Eastern districts of the North-Western Provinces and had partly filled up, but had been the cause of thunderstorms in North-East India and the East of the Central Provinces. The former had given light to moderate rain and snow in the North-West Himalayas and light showers in the submontane districts. The largest falls reported were 1·05 inches at Chakrata, ·68 inch at Srinagar, ·55 inch at Mussooree and ·52 inch at Murree. By Monday morning the depression in North-East India had practically filled up but an irregular cyclonic circulation of the winds in Bengal showed the presence of a residual depression in that province. Thunderstorms had again given showers in Assam, Bengal, Chota Nagpur, Bihar, Orissa and the Eastern districts of the Central Provinces. Jessore reported a heavy fall of 3·40 inches, and Burdwan one of 1·39 inches. A few light thunderstorms were received in Bengal and Assam during the next twenty-four hours, but practically no rain was reported from other parts of the country on Tuesday morning. A moderately heavy fall of rain had, however, been recorded at Bushire and a depression was approaching India from Persia which entered Upper Sind and the South-West Punjab on Wednesday. It had given no rain in Baluchistan, but light falls of rain and snow were reported from Kashmir. The depression was stationary on Thursday and Friday, but the barometer continued falling in North-West India and by Friday morning the depression had intensified into one of moderate intensity with pressure slightly more than two tenths in defect in Upper Sind. Light snow had continued falling in Kashmir and Murree and Cherat reported light showers on Friday. During the next 24 hours light rainfall extended along the North-West Himalayas and in the submontane districts but the amounts reported were all small, the largest being falls of half an inch at Minimarg and Murree. The depression had commenced filling up and had drifted eastwards. On Saturday

morning it was lying over the South-East Punjab and the adjoining districts of the North-Western Provinces.

Daily Summary.—*Sunday, February 25th.*—Pressure had risen briskly to rapidly in the Punjab, Rajputana, Central India and the western districts of the North-Western Provinces. The depression in the Punjab had broken up in the Simla and Mussooree hills and the depression in Rajputana had advanced into the East of the North-Western Provinces, and had partly filled up. Light to moderate rain and snow had fallen in the North-West Himalayas and light showers in the submontane districts. Thunderstorms had occurred in North-East India and the East of the Central Provinces. Mean temperature was 4° in excess in Central India, 3½° in Berar and in excess by smaller amounts in Orissa, Bihar, the North-Western and Central Provinces and Madras.

Monday, February 26th.—Pressure had risen slightly to briskly in North-West and Central India and had fallen slightly to briskly in Bihar, Bengal, Assam and Upper and Central Burma. The depression in the North-Western Provinces had practically filled up. Thunder showers were reported from Assam, Bengal, Chota Nagpur, Bihar, Orissa and the East of the Central Provinces. Colombo and Wellington had received light showers, and very light showers had also fallen in the Upper India hill districts.

Tuesday, February 27th.—Pressure had fallen briskly to rapidly over the greater part of Northern India and a low pressure area lay over the North-East Himalayas and their submontane districts. A few thunderstorms were reported from Assam and Bengal. Mean temperature was from 1° to 2½° below the normal in Rajputana and Central India and 3° in excess in Orissa and Mysore.

Wednesday, February 28th.—Pressure had given way briskly to rapidly in North-West India and a shallow depression had entered Upper Sind and the South West Punjab. Pressure had risen briskly to rapidly along the North-East Himalayas, and the low pressure area over that region had filled up. Light showers had fallen in Kashmir and at Sibsagar and Chittagong. Mean temperature was in slight to moderate defect in Assam, Bengal, Bihar, and Chota Nagpur; normal in the North Western and Central Provinces, Gujarat, Central India and the West Coast; and in excess elsewhere.

Thursday, March 1st.—Pressure had fallen generally except in the South of the Peninsula, Gujarat and the West and North Punjab, where it had been steady or had risen slightly. The depression in North-West India had been stationary but had extended Eastward into North Rajputana, the South-East Punjab and the Adjacent districts of the North-Western Provinces. Light snow had fallen in Kashmir. Mean temperature was from 3° to 4° in excess in Berar, Mysore and the Deccan, was in slight to moderate defect in Upper Burma and North-East India, and was normal in the West Coast and South India.

Friday, March 2nd.—The barometer had fallen briskly in Baluchistan, Sind, Rajputana and the Punjab, and the depression in North-West India had intensified but was unchanged in position. Light falls of rain and snow were reported from Kashmir, Murree and Cherat, and light showers of rain from Assam. Temperature had risen in all provinces except Burma, Sind, the West Coast, Mysore and the Madras Deccan, and mean temperature was in very large excess in Rajputana, and in large excess in the Punjab, Sind, Central India and Berar.

Saturday, March 3rd.—Pressure had risen briskly to rapidly in Baluchistan, Sind and West Rajputana and had changed by small amounts elsewhere. The depression in North-West India had drifted eastwards and was central in the South-East Punjab, but had commenced filling up. Light snow had fallen in North Kashmir, and Thunderstorms had given showers in the North-West Himalayas and submontane districts and also in Assam. Mean temperature was normal in Burma, Gujarat and the West Coast and in excess in the remaining provinces, the excess being large in Rajputana, Orissa, the North Western Provinces, Central India and the Madras Deccan.

Temperature.—During the first half of the week temperature, though generally in excess, did not vary from the normal by any large amounts, but on Thursday and Friday there was a general rise of temperature, largest in North-West and North-East India. Mean temperature was in very large excess (+9°) in Rajputana on Friday, and a number of stations reported maximum temperatures exceeding 100° in the Deccan, Berar and the Central Provinces.

The highest temperatures on Friday and Saturday were registered in Madras, especially in the Madras Deccan and in the South of the Central Provinces. Cuddapah reported 104°·7 on Friday and 106°·2 on Saturday.

The mean temperature of the week was 1°·2 in defect in Assam, normal in Burma, Bengal, Bihar, Chota Nagpur, Gujarat and the West Coast, and in excess in the remaining provinces. The excess average 3° in the Punjab, Berar, Mysore and the Madras Deccan.

The following table gives mean temperature variation data of the week :—

PROVINCE.	VARIATION FROM NORMAL OF MEAN TEMPERATURE OF 24 HOURS PRECEDING 8 A.M. OF							Mean variation of week.
	25th.	26th.	27th.	28th.	1st.	2nd.	3rd.	
	°	°	°	°	°	°	°	°
Burma	0	−0·1	+1·6	+1·7	+0·7	+0·1	+0 9	+0·7

N.-W. P. and Oudh	+2·9	+1·2	−0·5	−0·4	+1·0	+3·2	+6 6	+2 0
Punjab	−1·3	+0·2	+1·0	+4·2	+5·0	+7 2	+4·4	+3·0
Sind	−0·4	−0·1	+1·9	+1·7	+6 0	+5·7	+4 4	+4·7
Rajputana	−0·3	−2·0	−1·1	+1·1	+5·5	+8·8	+6·4	+2 6
Gujarat	−0·3	−1·2	−0·3	+0·2	+1·1	+2·3	−0·2	−0 2
Central India	+3·9	−1·5	−2·3	−0·9	+1·6	+5·0	+6·3	+1·7
Central Provinces	+1 5	+0·4	−0·2	0	+1·6	+3·5	+4·0	+1·6
Berar	+3·5	+1·0	+2·1	+1·9	+3·0	+5 7	+3 4	+3·0
West Coast	−1·3	−0 8	+0·1	−0·3	+0·4	+0 1	−0·9	−0·4
Bombay Deccan	+0·7	+0·5	+1·8	+3 1	+3·1	+3·7	+2·1	+2·1
Mysore	+1·8	+3·2	+3·1	+3·2	+3·6	+3·5	+3·2	+3·1
Madras Coast	+2 2	+1 4	+0·6	+1·3	+2·4	+2·9	+4·2	+2·1
Madras Deccan	+1·5	+2 5	+2·0	+3·3	+4 0	+4·3	+4·9	+3·2
South India	+2·4	+3·4	+0·8	+1·2	+0·7	+3·2	+3·2	+2·2
Mean for whole of India	+1·0	+0·7	+0 9	+0·7	+1·5	+3·1	+3 3	+1·6

The mean temperature for the whole of India varied by less than one degree from the normal on the 26th, 27th and 28th February and by less than 2° on the 25th February and the 1st March. On the 2nd and 3rd March the variation was +3°·1 and +3°·3 respectively. For the whole week the excess averaged 1°·6.

Rain.—Showers have been received during the past week in Upper Burma, North-East India, Orissa, parts of the North-Western and Central Provinces, the Punjab, Malabar, Gunjam and South Madras. The amounts received have been small, the average rainfall of all divisions, except the Surma Valley, being less than one inch in amount, but they have been equal to or in excess of the small normal rainfall of the week in Assam, Bengal, Chota Nagpur, Bihar, the East, East-submontane and hills divisions of the North-Western Provinces, the North and hills divisions of the Punjab, Malabar, South Madras, the North division of the East Coast and the East division of the Central Provinces.

The last three columns of the table at the end show that the rainfall of the period, 31st December to 3rd March, has been practically normal or in excess in Bengal (except in the hills), Chota Nagpur, Bihar, Oudh, the North-Western Provinces (except the West division), the hills, submontane and north divisions of the Punjab, the Central and East divisions of the Central Provinces, the Baluchistan Hills, Malabar and South Central Madras.

The deficiency has amounted to or has exceeded 70 per cent. of the normal rainfall in Burma, Coorg, the Kokan, the Bombay Deccan, Khandesh, Berar, Gujarat, Kathiawar, Sind, Rajputana, Central India (West) the hill tracts of the North Madras Coast, Central Madras and the South and Central divisions of the East Coast.

The following gives the largest amounts received at individual stations during the week :—

Assam—Karimgunge (Sylhet)	2·20 inches.
Bengal—Jessore	3·40 "
Do. Kulna	2·15 "

W. A. BION,
for Meteorological Reporter to the Government of India.

SIMLA, *8th March*, 1900.

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 10th March.*—Some light showers fell in the northern parts of the Circars; no rain fell elsewhere. The water supply is growing more scanty. Preparations for next season are being made in places and cultivation under effective irrigation sources is going on. Standing crops under irrigation are fair. Most crops have already been harvested; the yield of some gathered during the week was poor. Pasturage has generally dried up; but fodder is available in most places. Cattle are in normal condition generally though deteriorating in parts of the Deccan. Increased exports have caused a further rise in prices in the Deccan, and elsewhere prices are generally slightly dearer. The prices of staple grains are dearer than scarcity rates in the Deccan and North Arcot—cholam, Kistna, 13·5; Kurnool, 12·7; Bellary, 11·6; Cuddapah, 12·9; and raggi, Cuddapah, 13·9, seers per rupee. In the most affected taluk of Cuddapah raggi and cholam are about 14·25 seers per rupee. Test works have been newly opened in Kistna, Kurnool and Bellary. Numbers of relief workers.—In the Deccan:—855 men; 1,709 women; 601 children. Total 3,165. There are 100 relief workers in Kistna. 1,690 men and 1,350 women weavers were relieved in Cuddapah. Total relief workers 6,305 against 4,164 revised numbers last week.

Bombay.—*For week ending 12th March.*—Slight rain fell during the week in parts of Poona and Sholapur; none elsewhere. The standing spring crops are in good condition in the Konkan and three districts of Sindh, and also in irrigated lands in Baroda, three districts of Gujarat and two of the Deccan. The spring crops have been damaged by frost in parts of two districts of Sindh and have withered elsewhere. The reaping of remnants of the spring crops has been completed in Sholapur, Satara and Belgaum, and is progressing in Ahmedabad, Kaira, Rajkot and Baroda, and in the other districts of the Karnatak and Deccan. The fodder supply is scanty in Broach and in parts of Sindh, the Deccan and the Karnatak. Cattle are suffering severely owing to scarcity of fodder in Baroda and in three districts of Gujarat and in parts of four districts of the Deccan. Prices have fallen in two districts, risen in seven, and are stationary elsewhere.

The daily average numbers on relief for the week ending 10th March are as follows:—British districts—On test works, 5,676; on relief works, 929,337; dependants, 263,942. Total on works 1,198,955. In poor-houses, 24,037; on village relief, 68,334. Total on gratuitous relief 92,371. Native States:—On relief works, 377,318; dependants, 62,200. Total on works, 439,518. In poor-houses, 27,015; on village relief, 8,004. Total on gratuitous relief 35,019. Grand total 1,765,863.

Bengal.—*For week ending 12th March.*—There was general rain during the week in Orissa, and in the districts of Midnapore, Hooghly, the 24-Parganas, Jessore, Mymensingh and Tippera. In Puri the rain was good for the spring and mango crops, which were in need of it. The spring and cold-weather crops are being harvested, and the collection of opium is going on. Spring rice is doing well. Cultivation of lands for autumn rice and jute is in progress. In Hazaribagh and Ranchi the prospects of the *mahua* and mango crops are good. The price of rice is reported to have risen in ten districts and fallen in three, it is stationary in the remainder. The rise in price at Ranchi is noticeable—from 9½ seers to 8½ seers per rupee. Fodder is generally sufficient.

North-Western Provinces and Oudh.—*For week ending 14th March.*—The weather has been clear except in the Dehra Dun district where thirty cents of rain fell. The spring crops are now being generally harvested and threshing operations have commenced in places. Extra spring crops and sugarcane are being planted, and the tilling of soil for the autumn crops is in progress in Bijnor. Strong westerly winds have caused some damage to spring

crops in sugarcane tracts, while in Budaun spring crops have suffered slightly from the same cause. The extraction of opium is in full progess. Supplies and fodder are generally sufficient. Prices are generally steady or have fallen slightly. There were 2,142 persons on four relief works and 303 persons on gratuitous relief in the Jhansi district. The number of persons receiving relief in poor-houses was :—Jhansi, 100; Mahroni, 41; Muttra, 193; and Agra, 22—of whom 8 were immigrants.

Punjab.—*For week ending 14th March.*—There was no rain except a slight fall in parts of Dera Ismail Khan. The prices of wheat are falling in Hissar, Rohtak, Gurgaon, Jullundur, Mooltan, Shahpur, Sialkot, Rawalpindi and Dera Ismail Khan; they are rising in Umballa and Amritsar and remain unchanged elsewhere. The sowing of sugarcane, cotton, tobacco, and extra spring crops is in progress. Crops on well-irrigated land are being watered in Jullundur. Ploughings for the autumn crops have commenced in Umballa and Lahore. The standing irrigated crops are good in Hissar and Rohtak, and average in other districts. Crops irrigated by brackish well water are suffering in Rohtak. Rain is badly wanted throughout the province for unirrigated crops which are generally in bad condition. Dry land crops are withering in Gurgaon from high winds, low water supply, feebleness of well bullocks and want of rain. The Kalapani water supply in Dera Ismail Khan is running short. Rape, gram and barley crops are being damaged by caterpillars in parts of Ferozepore, and the gram crop has also been damaged by the same insect in parts of Dera Ismail Khan. The condition of cattle is good in Amritsar, improving in Sialkot, starving in Jhelum, fair in Karnal and poor elsewhere. Fodder is said to be scarce in all districts and this scarcity is keenly felt especially in unirrigated tracts. Green fodder is procurable in Sialkot; but not in sufficient quantities. The prices of maize are falling in Hissar, Lahore and Peshawar, and are rising in Amritsar, Sialkot and Rawalpindi; they remain unchanged elsewhere. The prices of gram are falling in Hissar, Rohtak, Gurgaon, Jullundur, Sialkot, Shahpur, Peshawar and Bannu; are rising only in two districts and remain unchanged elsewhere. Wheat is selling from 10 to 13½; gram, 11½ to 14½; barley, 12 to 14; bullrush millet, 9¾ to 13; great millet, 9¾ to 12; maize, 10 to 15$\frac{5}{16}$; and rice, 9 to 10 seers per rupee. The average number of relief and test workers, dependants, etc., was as follows:—British districts:—relief workers, 135,081, against 131,541, dependants, 52,122, against 49,763, test workers, 28,108, against 36,827. In poor-houses, 4,628, against 4,661. Otherwise relieved, 21,647, against 21,891. Native states—relief workers, 3,599 against 3,466. Gratuitously relieved:—3,862, against 4,088. No report has been received from Ferozepore

Burma.—*For week ending 10th March.*—In Lower Burma the harvesting operations have almost been completed in Myaungmya and have been completed elsewhere. Dry weather paddy in Tavoy is reported to be in good condition. The wet weather crop has been generally well over the average. In Upper Burma the harvesting of wet weather paddy has everywhere been completed except in Yamethin where threshing has not yet been completed. The cultivation of dry weather paddy has been completed in some districts and continues in others. In Kyaukse ploughing for early wet weather paddy and planting of sugarcane have commenced. The plucking of cotton in Thayetmyo, gathering of gram and peas, and reaping of wheat in Minbu, reaping of *juar* in Mergui and gathering of beans in Lower Chindwin and Yamethin are in progress. The island crops have been damaged in the Salin, Pakokku and Shwebo Townships. The price of paddy has fallen slightly in Akyab, Rangoon, Thôngwa, Myaungmya and Mandalay and has risen slightly in Prome and considerably in Pegu, Henzada, Mergui and Thayetmyo.

Central Provinces.—*For week ending 10th March.*—The nights and mornings continue cool but the days are growing warmer. The harvesting of the spring crops is approaching completion. Threshing and winnowing are in progress in parts. The pressing of sugarcane has almost been completed in Betul. The preparation of the land for autumn sowings is in progress in parts of Nimar, Mandla, Nagpur, Wardha and Chanda. The water supply is scanty and fodder is generally insufficient. Prices are steady in Saugor, Jubbulpore, Mandla, Betul, Chhindwara, Balaghát, Bilaspur and Sambalpur; there are local fluctuations elsewhere. The cheapest prices, in seers per rupee, are:—wheat, 12; gram, 16; rice, 11⅞; and *juar*, 12. The dearest prices are:—wheat, 8; gram, 9½; rice, 8⅕; and *juar*, 9 seers per rupee. Over the province as a whole the number on famine relief has increased by 82,000, of which Raipur alone

accounts for about 26,000. The largest increases occur in the Nagpur and Chhattisgarh divisions. There are 152 Public Works Department relief camps now open. The numbers on relief at the end of the week were as follows:—Relief workers—Public Works Department—adults, 590,630; children, 101,315. Village works, 319,825; grass cutting works, 21,249. Weaver relief, 25,247. Total 1,058,266. Gratuitous relief:—Dependants—adults, 4,984; children, 108,334. Poor-houses:—adults, 432; children, 134. Kitchens:—adults, 24,406; children, 184,709. Otherwise relieved:—adults, 92,562; children, 20,251. Total on gratuitous relief, 435,812. Total on all forms of relief, 1,494,078. Feudatory States:—relief workers, 35,075; gratuitous relief, 12,243. Total 47,318. The figures relate to ten States only.

Assam.—*For week ending 13th March.*—The weather is seasonable. Ploughing for early rice in the Assam Valley and for lowland winter rice in Sylhet continues. Pruning of tea and gathering of mustard is nearly finished. Pressing of sugarcane and gathering of pulses is in progress. The outturn of mustard is generally good. Prospects of sugarcane are good in Sylhet and Lakhimpur; elsewhere they are indifferent. Land is being prepared for jute in Goalpara and the Garo Hills. Prices:—Common rice; Silchar, 16 to 17; Sylhet, 17½; Dhubri and Tezpur, 16; Gauhati, 18½; Nowgong, 18; Sibsagar, 13; and Dibrugarh, 11½ seers per rupee.

Mysore and Coorg.—*For week ending 13th March.*—MYSORE: The standing crops are withering in parts. Prices have risen slightly in Hassan, Kadur and Shimoga and have fallen in the Bangalore and Chitaldroog districts. Paddy has been sown in parts of Bangalore, Tumkur and Kolar. Water and fodder are reported to be scarce in parts of Bangalore, Tumkur, Hassan, Chitaldroog, Mysore and Shimoga.

COORG:—*For week ending 13th March.*—Prices of food grains rising. Public health, fair. The supply of water and fodder for cattle is decreasing.

Berar and Hyderabad.—*For week ending 10th March.*—BERAR: No rain has fallen. The weather is warm. The harvesting of wheat and gram continues and the ploughing of fields for the ensuing crop is in progress. Fodder and water are insufficient. Prices in seers per rupee—Akola, 9½; Amraoti, 10¾; Basim, 8¾; Buldana, 9½; Ellichpur, 9; and Wun, 10. The numbers on relief were:—Workers, 270,299; non-workers, 44,526; poor-houses, 5,689; village relief, 8,614. Grand total, 329,128.

HYDERABAD: *For week ending 10th March.*—Eight cents of rain have fallen. The total rainfall from 1st January amounts to 23 cents. Harvesting of spring crops continues, but results are unsatisfactory. Winter rice sown in land under wells is withering for want of rain. Water-supply is very deficient. The condition of cattle is deteriorating. Prices of grain are rising, they are:—wheat, 5⅓; coarse rice, 6; and *juar*, 8⅝ seers per current sicca rupee. The total number of persons on relief works, including dependants, was 166,788, and of gratuitously relieved, 15,750.

Rajputana.—*For week ending 7th March.*—No rain fell during the week. The spring harvest is very poor. The remaining agricultural stock is in bad plight in most States and fodder is very scarce. Prices are slightly rising in 6 States, falling in 5 and are steady in the others. Prices:—Sirohi, 8¼; Marwar, 9⅞; Partabgarh, 9¼; Mewar, 9; Tonk, 8⅞; Bundi, 9 3/16; Shahpura, 9½; Ajmer and Beawar, 11; Jaipur, 13 13/16; Kishangarh, 12½; Bharatpur, 13; Alwar, 11 3/16; Bikanir, 8½; Jaisalmer, 6 seers per rupee. Number on relief works:—Marwar, 123,691; Mewar, 99,629; Bundi, 4,787; Tonk, 3,779; Shahpura, 2,661; Ajmer, 24,160; Merwara, 59,759; Jaipur, 33,394; Kishangarh, 6,709; Karauli, 1,000; Bharatpur, 10,955; Alwar, 9,145; Bikaner, 36,293; Jaisalmer, 1,672; Kotah, 25,290; Jhallawar, 2,301. On gratuitous relief:—Marwar, 15,373; Mewar, 24,854; Bundi, 912; Tonk, 674; Shahpura, 914; Ajmer, 8,248; Merwara, 18,282; Jaipur, 28,000; Kishangarh, 3,330; Karauli, 200; Bharatpur, 879; Alwar, 1,377; Bikanir, 969; Jaisalmer, 19; Kotah, 6,341; Jhallawar, 2,161. Besides these, 191 persons in Ajmer were relieved by private charity. Total for all Rajputana, excluding figures for Sirohi not received, are:—Works, 445,226; and gratuitous and charitable relief, 112,724 against 412,101 and 122,995.

Central India.—*For week ending 7th March.*—No rain has fallen during the week. Agricultural operations have been completed in Bundelkhand and are in progress elsewhere. No change in the condition of the standing crops, agricultural stock or pasturage since last report. Prices are steady in Gwalior, Baghelkhand and Malwa, are high in Bhopal and above normal in Bundelkhand. Average prices in seers per rupee—Gwalior, 12; Bhopal, $10\frac{1}{2}$; Bundelkhand, $14\frac{3}{8}$; Malwa, $10\frac{1}{4}$; Bhopawar, $8\frac{3}{4}$. Numbers on relief works—Gwalior, 1,313; Bhopal, 12,690; Bundelkhand, 2,552; Baghelkhand, 22,984; Malwa, 18,196; Bhopawar, 50,352. On test works—Gwalior, 1,399. On gratuitous relief—Bhopal, 995; Bundelkhand, 459; Baghelkhand, 341; Malwa, 4,846; Bhopawar, 3,343. Figures for Indore not received.

Baroda.—*For week ending 3rd March.*—There is no change in the agricultural prospects. The condition of the agricultural stock is not satisfactory owing to want of fodder. Prices—bajri, 18; *juar*, 19; wheat, 18; rice, superior, 13; inferior, 17 pounds of 40 tolas per British rupee. The average number of persons employed on relief works in Baroda territory was 47,574, and the number on gratuitous relief was 11,096.

Kashmir.—*For week ending 13th March.*—The weather is fine. Prices continue below normal. The price of rice is 27 seers per rupee.

JAMMU PROVINCE.—*For week ending 14th March.*—No rain has fallen. Prices remain stationary—wheat, 10 to 16; maize, $11\frac{1}{2}$ to 20 seers per rupee. The condition of the standing crops is fair. Fodder is scarce.

Nepal.—*For week ending 10th March.*—No rain has fallen. The weather is bright and clear. Standing crops are doing well. The price of rice is $8\frac{1}{2}$ seers per rupee.

The number of persons in receipt of relief during the preceding and present weeks in each Province is shown in the following table:—

§ Figures relate to ten States only.

T. W. HOLDERNESS,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

Note.—The figures are compiled from returns obtained from Local Governments and Political Officers, and give the District details of the Provincial totals published weekly in the Crop and Weather Summary of the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons gratuitously relieved in poor-houses or at their homes.

The dates at the head of the table are the dates of the *Gazette of India* in which the Provincial totals were published. The figures, however, actually show the numbers on relief in each preceding week.
